Female 30.0\% 40.0\% 60.0\% 37.5\%
Totals $100.0 \% 100.0 \% 100.0 \% 100.0 \%$
2.3 (a) You can conclude that Android smartphones have seen steady increase in market shares while Blackberry and Other OS smartphones have seen steady decrease in market shares since 2011. Android smartphones dominated the market in all those three years.
(b) The iOS smartphones have overtaken Other OS smartphones and owned the second largest market share since 2012. The Microsoft smartphones have arisen to the third place in terms of market share in 2013 from the fifth place position in 2011 while the Other OS smartphones have dropped from the second place in 2011 to the last place in 2013.
2.4 (a) The percentage of complaints for each automaker:

| Automaker | Frequency | Percentage | Cumulative Pct. |
| :--- | ---: | ---: | ---: | ---: |
| General Mbtors | 551 | $18.91 \%$ | $18.91 \%$ |
| Other | 516 | $17.71 \%$ | $36.62 \%$ |
| Nissan Mbtors Corporation | 467 | $16.03 \%$ | $52.64 \%$ |
| Ford Mbtor Company | 440 | $15.10 \%$ | $67.74 \%$ |
| Chrysler LC | 439 | $15.07 \%$ | $82.81 \%$ |
| Toyota Mbtor Sales | 332 | $11.39 \%$ | $94.20 \%$ |
| American Honda | 169 | $5.80 \%$ | $100.00 \%$ |

(b) General Motors has the most complaints, followed by Other, Nissan Motors Corporation, Ford Motor Company, Chryler LLC, Toyota Motor Sales and American Honda.
(c) The percentage of complaints for each category:

| Category | Frequency | Percentage | Cumulative Pct. |
| :--- | ---: | ---: | ---: |
| Powertrain | 1148 | $42.82 \%$ | $42.82 \%$ |
| Steering | 397 | $14.81 \%$ | $57.63 \%$ |
| Interior Electronics/Hardware | 279 | $10.41 \%$ | $68.03 \%$ |
| Fuel/Emission/Exhaust System | 240 | $8.95 \%$ | $76.99 \%$ |
| Airbags and Seatbelts | 201 | $7.50 \%$ | $84.48 \%$ |
| Body and Glass | 182 | $6.79 \%$ | $91.27 \%$ |
| Brakes | 163 | $6.08 \%$ | $97.35 \%$ |
| Tires and Wheels | 71 | $2.65 \%$ | $100.00 \%$ |

(d) Powertrain has the most complaints, followed by steering, interior electronics/hardware, fuel/emission/exhaust system, airbags and seatbelts, body and glass, brakes, and, finally, tires and wheels.
2.5 (a) The percentage of values for each factor:

| Most Important Factor | Frequency | Percentage | Cumulative Pct. |
| :--- | ---: | ---: | ---: | ---: |
| Product | 464 | $35.80 \%$ | $35.80 \%$ |
| Leadership | 400 | $30.86 \%$ | $66.67 \%$ |
| Marketing | 346 | $26.70 \%$ | $93.36 \%$ |
| Technology | 86 | $6.64 \%$ | $100.00 \%$ |

(b) Product is the most influencing factor in successful start-ups, followed by Leardership, Marketing and Technology.

| Region | Oil Production |  |
| :--- | :--- | ---: |
|  | (millions of barrels a day) |  |
| Iran | 2.69 | $3.27 \%$ |
| Saudi Arabia | 9.58 | $11.66 \%$ |
| Other OPEC countries | 17.93 | $21.82 \%$ |
| Non-OPEC countries | 51.99 | $63.26 \%$ |
| Total | 82.19 | $100.00 \%$ |

(b) More than half the oil produced is from non-OPEC countries. About $22 \%$ is produced by OPEC countries other than Iran and Saudi Arabia.
2.7 (a) The percentage of values for each response need:

| Needs | Frequency | Percentage | Cumulative Pct. |
| :--- | ---: | ---: | ---: |
| Easier-to-use analytictools | 127 | $30.98 \%$ | $30.98 \%$ |
| Improved ability to present and interpret data | 123 | $30.00 \%$ | $60.98 \%$ |
| Improved ability to predict impacts of my actions | 49 | $11.95 \%$ | $72.93 \%$ |
| Faster access to data | 41 | $10.00 \%$ | $82.93 \%$ |
| Improved relationships to the business line organizations | 37 | $9.02 \%$ | $91.95 \%$ |
| Improved ability to plan actions | 33 | $8.05 \%$ | $100.00 \%$ |

(b) "Easier-to-use analytic tools" is the most frequently mentioned need, followed by "Improved ability to present and interpret data", "Improved ability to predict impacts of my actions", "Faster access to data", "Improved relationships to the business line organizations" and "Improved ability to plan actions".
$2.8 \quad$ (a)
Table of total percentages

| ENJOY SHOPPING FOR <br> CLOTHING FOR YOURSELF | GENDER |  |  |
| :--- | ---: | :--- | ---: |
|  | Male | Female | Total |
| Yes | $22 \%$ | $25 \%$ | $47 \%$ |
| No | $28 \%$ | $25 \%$ | $53 \%$ |
| Total | $50 \%$ | $50 \%$ | $100 \%$ |

Table of row percentages

| ENJOY SHOPPING FOR <br> CLOTHING FOR YOURSELF | GENDER |  |  |
| :--- | ---: | ---: | :---: |
|  | Male | Female | Total |
| Yes | $46 \%$ | $54 \%$ | $100 \%$ |
| No | $53 \%$ | $47 \%$ | $100 \%$ |
| Total | $50 \%$ | $50 \%$ | $100 \%$ |

Table of column percentages

| ENJOY SHOPPING FOR <br> CLOTHING FOR YOURSELF | GENDER |  |  |
| :--- | ---: | :--- | ---: |
|  | Male |  | Female |
| Total |  |  |  |
| Yes | $44 \%$ | $51 \%$ | $47 \%$ |
| No | $56 \%$ | $49 \%$ | $53 \%$ |
| Total | $100 \%$ | $100 \%$ | $100 \%$ |

(b) A higher percentage of females enjoy shopping for clothing for themselves.

Table of total percentages:

|  | Project Owner's Backing History |  |  |
| :--- | ---: | ---: | ---: |
| Project Outcomes | Backing History | No Backing History | Total |
| Successful | $26 \%$ | $28 \%$ | $54 \%$ |
| Not successful | $16 \%$ | $30 \%$ | $46 \%$ |
| Total | $42 \%$ | $58 \%$ | $100 \%$ |

Table of row percentages:

|  | Project Owner's Backing History |  |  |
| :--- | ---: | ---: | :---: |
| Project Outcomes | Backing History | No Backing History | Total |
| Successful | $48 \%$ | $52 \%$ | $100 \%$ |
| Not successful | $35 \%$ | $65 \%$ | $100 \%$ |
| Total | $42 \%$ | $58 \%$ | $100 \%$ |

Table of column percentages:

|  | Project Owner's Backing History |  |  |
| :--- | ---: | ---: | ---: |
| Project Outcomes | Backing History | No Backing History | Total |
| Successful | $62 \%$ | $49 \%$ | $54 \%$ |
| Not successful | $38 \%$ | $51 \%$ | $46 \%$ |
| Total | $100 \%$ | $100 \%$ | $100 \%$ |

(b) The column percentages is most informative for these data as they show that among those owners with backing history, $62 \%$ are successful while only $49 \%$ are successful among those with no backing history.
(c) The percentage of success among owners with backing history is higher than those with no backing history.
2.10 Social recommendations had very little impact on correct recall. Those who arrived at the link from a recommendation had a correct recall of $73.07 \%$ as compared to those who arrived at the link from browsing who had a correct recall of $67.96 \%$.
2.11 Ordered array: $\begin{array}{lllllll}63 & 64 & 68 & 71 & 75 & 88 & 94\end{array}$

(b) Patterns of star rating conditioned on risk:

For the large-cap funds as a group, most are rated as three-star, followed by four-star, two-star, five-star and then one-star. The pattern of star rating is the same among the low-risk large-cap funds. The pattern is different among the high-risk and average-risk large-cap funds. Among the high-risk large-cap funds, most are rated as two-star, followed by one three-star with no three-star, four-star or five-star rating. Among the average-risk large-cap funds, most are two-star and three-star, followed by one-star, fourstar and five-star rating.
For the mid-cap funds as a group, most are rated as four-star, followed by three-star, twostar, five-star and then one-star. The pattern of star rating is different among the averagerisk mid-cap funds with the largest portion of two-star, followed by three-star, four-star, one-star and five-star. Among the low-risk mid-cap funds, most are rated as four-star, followed by three-star, five-star, two-star and one-star.
For the small-cap funds as a group, most are rated as three-star, followed by four-star, two-star, one-star and then five-star. Among the average-risk small-cap funds, most are three-star, followed by two-star, four-star, one-star and five-star. Among the high-risk small-cap funds, most are rated as one-star, followed by equal portions of two-star, threestar and four-star and no five-star. Among the low-risk small-cap funds, most are fourstar, followed by three-star and equal portions of two-star and five-star with none rated as one-star.
Patterns of risk conditioned on star rating:
Among the large-cap funds, most are low-risk, followed by average-risk and finally highrisk. The pattern is the same among the one-star, two-star, three-star, four-star and fivestar large-cap funds. Among the mid-cap funds, most are low-risk, followed by averagerisk with no high-risk. The pattern is the same among the five-star, four-star and threestar mid-cap funds.
Among the small-cap funds, most are average-risk, followed by low-risk and finally high-risk. The pattern is the same for the two-star and three-star small-cap funds. Among the one-star small-cap funds, most are high-risk, followed by average-risk with no low-risk. Among the four-star and five-star small-cap funds, most are low-risk, followed by average-risk and high-risk.

(b) Patterns of star rating conditioned on risk:

For the growth funds as a group, most are rated as four-star, followed by three-star, twostar, five-star and one-star. The pattern of star rating is the same among the low-risk growth funds. The pattern is different among the high-risk and average-risk growth funds. Among the high-risk growth funds, most are rated as one-star, followed by twostar, equal portions of three-star and four-star with no five-star. Among the average-risk growth funds, most are rated as three-star, followed by two-star, four-star, one-star and five-star.
For the value funds as a group, most are rated as three-star, followed by four-star, twostar, one-star and five-star. Among the average-risk value funds, most are three-star, followed by two-star, one-star, and five-star with no four-star. Among the high-risk value funds, most are one-star, followed by two-star with no three-star, four-star or five-star. Among the low-risk value funds, most are three-star, followed by four-star, two-star, five-star and one-star.
Patterns of risk conditioned on star rating:
Most of the growth funds are rated as low-risk, followed by average-risk and then highrisk. The pattern is the same among the three-star, four-star and five-star growth funds. Among the one-star growth funds, most are average-risk, followed by equal portions of high-risk and low-risk. Among the two-star growth funds, most are average-risk, followed by low-risk and high-risk.
Most of the value funds are rated as low-risk, followed by average-risk and then high-risk. The pattern is the same among the two-star, three-star and five-star value funds. Among the one-star value funds, most are average-risk, followed by equal portions of high-risk and low-risk. Among the four-star value funds, all are low-risk with no average-risk or high-risk.
2.61 (a) Presented below are just one of the $4 \cdot 3 \cdot 2 \cdot 1=24$ possible pivotal tables of tallies in terms of counts:

Presented below are just one of the $4 \cdot 3 \cdot 2 \cdot 1=24$ possible pivotal tables of tallies in terms of \% of grand total:

(b) Patterns of star rating conditioned on type, market cap and risk:

From Problem 2.58 (b), we know that the growth funds as a group, most are rated as four-star, followed by three-star, two-star, five-star and one-star. The pattern of star rating is the same across the different market cap within the growth funds with most of the funds receiving a four-star rating, followed by three-star, two-star, five-star and onestar with the exception of small-cap funds with most of the funds receiving a four-star or three-star rating, followed by two-star, one-star and five-star. If we want to bore further down into the subsets of star-rating among the large-cap growth funds, we see that similar pattern does not hold for the various risk ratings. For example, among the largecap growth funds with an average-risk rating, most are rated as two-star, followed by equal shares of three-star and four-star, and then equal shares of one-star and five-star. Among the large-cap growth funds with a low-risk rating, most are rated as three-star, followed by four-star, two-star, five-star and one-star.
For the value funds as a group, most are rated as three-star, followed by four-star, twostar, one-star and five-star. Within the value funds, the large-cap funds follow the same pattern as the value funds as a group. If we want to bore further down into the subsets of star-rating among the large-cap value funds, we see that similar pattern does not hold through for the various risk ratings. For example, among the large-cap value funds with an average-risk rating, most are rated as one-star or three-star with none rated as two-star, four-star or five-star.
Patterns of market cap conditioned on type, risk and star-rating:
Again, from Problem 2.58 (b), we know that most of the growth funds are large-cap, followed by mid-cap and small-cap. The pattern is similar among the five-star, four-star, three-star and two-star growth funds but among the one-star growth funds, most are small-cap, followed by large-cap and mid-cap. If we bore further down into the subsets of risk-rating, we see that for all the star-ratings, the low-risk growth funds have the most large-cap, followed by mid-cap and then small-cap. However, similar pattern does not hold through among the average-risk and high-risk funds with one-star through five-star ratings.
2.62 (a)

(b) The values of the teams varied from $\$ 312$ million for the Milwaukee Bucks to $\$ 1,100$ million for the New York Knicks. The change in values was not consistent across the teams. The two most valuable teams, the Los Angeles Lakers, and the New York Knicks had very different increases in value ( $11 \%$ and $41 \%$ respectively.)
2.63 (a)

(b) The "finanical services" sector seems to have the best gains while the "automobiles \& parts" and "software \& computer services" sectors seem to have the worst gain.
2.63 (c)
cont.

(d) The treemap constructed in (c) allows easier recognition of the following: (i) the variation in market capitalization among companies in a particular country and (ii) in which countries are the larger market cap companies found; (iii) which country seems to have the most/more of the largest market cap companies. The treemap constructed in that in (a) allows easier recognition of the following: (i) the variation in market capitalization among companies in a particular country and a particular sector and (ii) in which countries and sectors are the larger market cap companies found; (iii) which countries and sectors seem to have the most/more of the largest market cap companies.
(a)

(b)

(c) Almost all the countries that had lower GDP had lower Internet use except for the Republic of Korea. The pattern of mobile cellular subscriptions does not seem to depend on the GDP of the country.
(a)

(b) General Motors has the highest sales at 234,071 while Subaru has the lowest sales at 35,994 . The change in sales is the highest for Subaru at $42.9 \%$ and lowest for Volkswagen at $0.3 \%$. The change in sales for General Motors is $16.3 \%$.
2.66 (a)

2.66 (b) There are 37 of such funds.

(b) The bar chart and the pie chart should be preferred over the exploded pie chart, doughnut chart, the cone chart and the pyramid chart since the former set is simpler and easier to interpret.
2.79 A histogram uses bars to represent each class while a polygon uses a single point. The histogram should be used for only one group, while several polygons can be plotted on a single graph.

A summary table allows one to determine the frequency or percentage of occurrences in each category.
2.81 A bar chart is useful for comparing categories. A pie chart is useful when examining the portion of the whole that is in each category. A Pareto diagram is useful in focusing on the categories that make up most of the frequencies or percentages.
2.82 The bar chart for categorical data is plotted with the categories on the vertical axis and the frequencies or percentages on the horizontal axis. In addition, there is a separation between categories. The histogram is plotted with the class grouping on the horizontal axis and the frequencies or percentages on the vertical axis. This allows one to more easily determine the distribution of the data. In addition, there are no gaps between classes in the histogram.
2.83 A time-series plot is a type of scatter diagram with time on the x -axis.
2.84 Because the categories are arranged according to frequency or importance, it allows the user to focus attention on the categories that have the greatest frequency or importance.
2.85 Percentage breakdowns according to the total percentage, the row percentage, and/or the column percentage allow the interpretation of data in a two-way contingency table from several different perspectives.
2.86 A contingency table contains information on two categorical variables whereas a multidimensional table can display information on more than two categorical variables.
2.87 The multidimensional PivotTable can reveal additional patterns that cannot be seen in the contingency table. One can also change the statistic displayed and compute descriptive statistics which can add insight into the data.

## Pareto Diagram

(c) The publisher gets the largest portion (64.8\%) of the revenue. About half (32.3\%) of the revenue received by the publisher covers manufacturing costs. The publisher's marketing and promotion account for the next largest share of the revenue, at $15.4 \%$. Author, bookstore employee salaries and benefits, and publisher administrative costs and taxes each account for around $10 \%$ of the revenue, whereas the publisher after-tax profit, bookstore operations, bookstore pretax profit, and freight constitute the "trivial few" allocations of the revenue. Yes, the bookstore gets twice the revenue of the authors.

2.92 cont.
(b) If the owner is interested in finding out the percentage of joint occurrence of gender and ordering of dessert or the percentage of joint occurrence of ordering a beef entrée and a dessert among all patrons, the table of total percentages is most informative. If the owner is interested in the effect of gender on ordering of dessert or the effect of ordering a beef entrée on the ordering of dessert, the table of column percentages will be most informative. Since dessert will usually be ordered after the main entree and the owner has no direct control over the gender of patrons, the table of row percentages is not very useful here.
(c) $16.67 \%$ of the men sampled ordered desserts compared to $29.09 \%$ of the women. Women are almost twice as likely to order desserts as men. $37.56 \%$ of the patrons ordering a beef entree ordered dessert compared to less than $15.7 \%$ of patrons ordering all other entrees. Patrons ordering beef are better than 2.3 times as likely to order dessert as patrons ordering any other entree.

| 450 up to 500 | 1 | 4 | 100 |

2.102 (b)
cont.

(c) The sampled fresh red meats, poultry, and fish vary from 98 to 397 calories per serving, with the highest concentration between 150 to 200 calories. One protein source, spareribs, with 397 calories, is more than 100 calories above the next highest caloric food. The protein content of the sampled foods varies from 16 to 33 grams, with $68 \%$ of the data values falling between 24 and 32 grams. Spareribs and fried liver are both very different from other foods sampled-the former on calories and the latter on cholesterol content.
2.103 (a)

(b) The wellhead average price was highest in the summer of 2008 and had since declined. The residential average price of gasoline in the United States is higher in the summer in general and seems to peak in June.
2.103 (c)
cont.

(d) There appears to be a slight positive relationship between the wellhead price and residential price.
2.104 (a)

(b) There is a downward trend in the amount filled.
(c) The amount filled in the next bottle will most likely be below 1.894 liter.
(d) The scatter plot of the amount of soft drink filled against time reveals the trend of the data, whereas a histogram only provides information on the distribution of the data.
2.105 (a)

(b) The Japanese yen had depreciated against the U.S. dollar since 1982 while the Canadian dollar appreciated gradually from 1980 to 1987 and from 1991 to 2002 and then started to depreciate since. The English pound to U.S. dollar's exchange rate has been quite stable since 1983.
(c) The U.S. dollar has appreciated against the Japanese yen since 1980 and appreciated against the Canadian dollar since 2002 in general while the exchange rate against the English bound has been stable in general.
2.105 (d)
cont.

(e) There is not any obvious relationship between the Canadian dollar and Japanese yen in terms of the U.S. dollar nor any relationship between the Japanese yen and English pound. There is a slightly positive relationship between the Canadian dollar and English pound which reflects the fact that when the Canadian dollar appreciated against the U.S. dollar, so did the English pound.
2.106 (a)

| Variations | Percentage of Download |
| :--- | :--- |
| Original Call to Action Button | $9.64 \%$ |
| New Call to Action Button | $13.64 \%$ |

(b)

(c) The New Call to Action Button has a higher percentage of downloads at $13.64 \%$ when compared to the Original Call to Action Button with a $9.64 \%$ of downloads.
(d)

| Variations | Percentage of Downloads |
| :--- | :--- |
| Original web design | $8.90 \%$ |
| New web design | $9.41 \%$ |

(f) The New web design has only a slightly higher percentage of downloads at $9.41 \%$ when compared to the Original web design with an $8.90 \%$ of downloads.
(g) The New web design is only slightly more successful than the Original web design while the New Call to Action Button is much more successful than the Original Call to Action Button with about $41 \%$ higher percentage of downloads.
(h)

| Call to Action Button | Web Design | Percentage of <br> Downloads |
| :--- | :---: | :---: |
| Old | Old | $8.30 \%$ |
| New | Old | $13.70 \%$ |
| Old | New | $9.50 \%$ |
| New | New | $17.00 \%$ |

(i) The combination of the New Call to Action Button and the New web design results in slightly more than twice as high a percentage of downloads than the combination of the Old Call to Action Button and Old web design.
(j) The New web design is only slightly more successful than the Original web design while the New Call to Action Button is much more successful than the Original Call to Action Button with about $41 \%$ higher percentage of downloads. However, the combination of the New Call to Action Button and New web design results in more than twice as high a percentage of downloads than the combination of the Old Call to Action Button and Old web design.
