

## Chapter 02 Test Bank KEY

1. In the context of the basic work-leisure model, "work" is defined as

- A. time devoted to a paying job or household work.
- B.** time devoted to a paying job.
- C. time devoted to any "undesirable" activity.
- D. all time not devoted to rest and relaxation.

AACSB: Reflective Thinking

Blooms: Remember  
Difficulty: 1 Easy

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

2. In the context of the basic work-leisure model, "leisure" time includes

- A. only time devoted to rest and relaxation.
- B. any time not devoted to either a paying job or household work.
- C. any time devoted to anything desirable.
- D.** any time not devoted to a paying job.

Blooms: Remember  
Difficulty: 1 Easy

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

3. The slope of an indifference curve at any point reflects the

- A.** rate at which a person is willing to substitute leisure for income.
- B. wage rate.
- C. income effect.
- D. substitution effect.

AACSB: Reflective Thinking

Blooms: Remember  
Difficulty: 1 Easy

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

4. Indifference curves are convex to the origin because

- A. at a lower income, a person is more willing to sacrifice income for additional leisure.
- B.** at a lower income, a person is less willing to sacrifice income for additional leisure.
- C. at any income level, a person is willing to sacrifice the same amount of income for additional leisure.
- D. the marginal rate of substitution of leisure for income is negative.

AACSB: Reflective Thinking  
Accessibility: Keyboard Navigation  
Blooms: Remember  
Difficulty: 1 Easy

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

5. The convex shape of a standard indifference curve reflects

- A.** a diminishing marginal rate of substitution of leisure for income.
- B. an increasing marginal rate of substitution of leisure for income.
- C. a constant marginal rate of substitution of leisure for income.
- D. the wage rate.

Accessibility: Keyboard Navigation  
Blooms: Remember  
Difficulty: 1 Easy

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

6. On an indifference map reflecting the tradeoff between income and leisure, higher levels of utility are achieved by moving

- A. from left to right along a given indifference curve.
- B. from right to left along a given indifference curve.
- C.** to an indifference curve further from the origin.
- D. to an indifference curve closer to the origin.

Learning Objective: 02-01 Use the basic income–leisure model to determine an individual’s optimal combination of income and leisure.  
 Topic: The Work-Leisure Decision: Basic Model

9. Refer to the following diagram representing Larry’s budget constraint and preferences.

Which of the following is a correct statement?

- A.** At A, Larry’s marginal valuation of leisure is higher than the market wage.
- B. At B, Larry’s marginal valuation of leisure is higher than the market wage.
- C. At C, Larry’s marginal valuation of leisure is lower than the market wage.
- D. At B, Larry values leisure the same amount as at A.

AACSB: Reflective Thinking  
 Blooms: Understand  
 Difficulty: 2 Medium

Learning Objective: 02-01 Use the basic income–leisure model to determine an individual’s optimal combination of income and leisure.  
 Topic: The Work-Leisure Decision: Basic Model

10. Refer to the following diagram representing Larry’s budget constraint and preferences.

At point A, Larry's marginal rate of substitution of leisure for income

- A. exceeds the wage and Larry would like to work more hours.
- B.** exceeds the wage and Larry would like to work fewer hours.
- C. is less than the wage and Larry would like to work more hours.
- D. is less than the wage and Larry would like to work fewer hours.

AACSB: Reflective Thinking  
 Blooms: Understand  
 Difficulty: 2 Medium

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
 Topic: The Work-Leisure Decision: Basic Model

11. On a standard income-leisure diagram, Sara has steeper indifference curves than John. This likely reflects the fact that

- A. Sara likes leisure but dislikes income, while John likes both.
- B. Sara likes income but dislikes leisure, while John likes both.
- C.** Sara values leisure more highly compared to income than John does.
- D. John values leisure more highly compared to income than Sara does.

Learning Objective: 02-01 Use the basic income–leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

15. The optimal work-leisure position is achieved where
- A.** the MRS  $L, Y$  is equal to the wage rate.
  - B. the difference between the MRS  $L, Y$  and the wage is greatest.
  - C. the wage rate is greatest.
  - D. the MRS  $L, Y$  is greatest.

AACSB: Reflective Thinking  
Accessibility: Keyboard Navigation  
Blooms: Remember  
Difficulty: 1 Easy

Learning Objective: 02-01 Use the basic income–leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

16. An individual whose MRS  $L, Y$  exceeds the wage at her current combination of leisure and income could increase utility by
- A. working more hours.
  - B.** working fewer hours.
  - C. increasing her income.
  - D. None of the other choices is correct; her utility is maximized.

Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

27. Refer to the following diagram, which shows a labor supply curve for an individual.

If the wage rises from  $W_1$  to  $W_2$ , we may conclude that

- A. the income effect is stronger than the substitution effect.
- B. the income effect and substitution effects are equal.
- C. the substitution effect is stronger than the income effect.
- D. labor supply is perfectly inelastic.

AACSB: Reflective Thinking  
Blooms: Understand  
Difficulty: 2 Medium  
Learning Objective: 02-01 Use the basic income-leisure model to determine an individual's optimal combination of income and leisure.  
Topic: The Work-Leisure Decision: Basic Model

28. Refer to the following diagram, which shows a labor supply curve for an individual.

If this person were now willing to supply only  $H_1$  hours of work at  $W_3$ , we could conclude that

- A. labor supply increased (the curve shifted to the right).
- B. labor supply decreased (the curve shifted to the left).**
- C. the person's preferences must have changed.
- D. the substitution and income effects are now equal.

*AACSB: Reflective Thinking  
Blooms: Understand
