- 1. What is a *developmental theory*? Identify three things discussed in the text that a theory can do.
- 2. Describe similarities between Freud's theory of psychosexual development and Erikson's theory of psychosocial development. Next, describe ways in which these theories differ.
- 3. Describe *classical* and *operant conditioning*. Next, identify the researcher who proposed the concept of classical conditioning and the researcher who introduced the idea of operant conditioning.
- 4. Explain *social learning theory*. From where did this theory originate, and what does it emphasize? Next, describe the concept of *modeling*, and indicate at least three reasons that a model is likely to be copied.
- 5. List Piaget's four stages of cognitive development in order, and explain what Piaget believed facilitates intellectual advancement.
- 6. Define *information-processing theory*. How does this theory different from Piaget's theory of cognitive development?
- 7. Your textbook describes seven techniques used by neuroscientists to understand brain function. List and describe two of these techniques. Despite advancements in brain imaging, why are theories still needed to understand human development?
- 8. Describe what Vygotsky meant by "apprenticeship in thinking" and "guided participation." Give an example of each.
- 9. Define Vygotsky's "zone of proximal development," including how it relates to learning. Provide two examples.
- 10. Maggie works is a child-care teacher who works primarily with toddlers. Most of the children that Maggie works with are not yet toilet-trained. Explain the advice a psychoanalyst, behaviorist, cognitive theorist, and a sociocultural theorist would give Maggie regarding her approach to toilet training.

- 11. Describe the two biologically-based drives associated with evolutionary theory, and explain how selective adaptation relates to this theory. Be sure to explain the process of selective adaptation in your answer.
- 12. Define *eclectic perspective*, and provide an example of how a clinician might use this approach to explain a case of childhood aggression.
- 13. List and describe the five theories that have contributed to our understanding of human development.

1. A developmental theory is a systematic statement of general principles that provides a framework for understanding how and why people change as they grow older. Theories can produce hypotheses, generate discoveries, and offer practical guidance.

	Good (5 pts.)	Fair (3 pts.)	Weak (1–0 pts.)

theory		developmental theory	
Identifies the	Tells the three things a	Tells two things a	Tells one thing or
three things a	theory can do	theory can do	nothing that a theory
theory can do			can do

2. Both Freud and Erikson proposed stage theories based on the belief that adult problems echoed childhood conflicts. However, Erikson's psychosocial theory had eight stages, while Freud's psychosexual theory had just four. Erikson named two polarities at each stage, and his stages encompassed the entire life span, while Freud's ended at adolescence. Erikson's theory also emphasized the influence of family and culture, while Freud's theory emphasized unconscious sexual urges.

	Good (5 pts.)	Fair (3 pts.)	Weak (1–0 pts.)
Describes similarities	States that both men	States that both	Does not describe

			describe how the
			theories differed

3. Classical conditioning is the learning process in which a meaningful stimulus is connected with a neutral stimulus that had no special meaning before conditioning. The person gradually reacts to the neutral stimulus with the same behavior as the meaningful one. Pavlov introduced the concept of classical conditioning. In operant conditioning, a person performs some action, and then a response occurs. If the response is pleasurable, the person is likely to repeat the action. If the response is unpleasant, the person is unlikely to repeat the action. Skinner is associated with operant conditioning.

	Good (5 pts.)	Fair (3 pts.)	Weak (1–0 pts.)
Describes classical	Correctly	Correctly describes one	Does not describe either

Names the	Correctly names	Correctly names Pavlov	Does not name either
researchers	Pavlov and	or Skinner	Pavlov or Skinner or
associated with	Skinner		confuses who belongs
each			with each type of
			conditioning

4. Social learning theory is an extension of behaviorism that emphasizes the influence that other people have over a person's behavior. Even without specific reinforcement, every individual learns many things through observation and imitation of other people. Modeling is the central process of social learning, by which a person observes the actions of others and then copies them. Models are people; they are most likely to be copied if they are admired, powerful, nurturing, or similar to the observer.

	Good (5 pts.)	Fair (3 pts.)	Weak (1–0 pts.)
Explains social	States that the theory is	States that everyone	Is vague about the

be copied			

5. The four stages are sensorimotor, preoperational, concrete operational, and formal operational. According to Piaget, cognitive equilibrium facilitates intellectual advancement because humans seek mental balance. Disequilibrium can cause cognitive growth if people change their thinking through assimilation or accommodation.

	Good (5 pts.)	Fair (3 pts.)	Weak (1–0 pts.)

	disequilibrium can		advancement
	cause assimilation or		
	accommodation		

6. Information-processing theory is a perspective that compares humans' thinking processes to a computer's analysis of data, including sensory input, connections, stored memories, and output. Instead of interpreting responses by infants and children, as Piaget did, information-processing theory focuses on the processes of thought—that is, when, why, and how neurons fire before a response.

7. Students can list and describe any two of the following techniques:

EEG (electroencephalogram): This measures electrical activity in the cortex. It can differentiate active brains from sleeping brains and brain states that are half-awake, or dreaming.

ERP (event-related potential): The amplitude and frequency of brain electrical activity change when a particular stimulus occurs. First the ERP establishes the usual patterns, and then researchers present a stimulus that causes a blip in electrical activity. ERP indicates how quickly and extensively people react.

MRI (magnetic resonance imaging): The water molecules in various parts of the brain each have a magnetic current, and measuring that current reveals the amount of myelin, neurons, and fluid in the brain.

fMRI (functional magnetic resonance imaging): In advanced MRI, function is measured as more oxygen is added to the blood flow when specific neurons are activated. The presumption is that increased blood flow means that the person is using that part of the brain. fMRI has revealed that several parts of the brain are active at once.

PET (position emission tomography): This can reveal the volume of neurotransmitters; the rise or fall of brain oxygen, glucose, amino acids; and more.

fNIRS (functional near infrared spectroscopy): This measures changes in blood flow. It depends on light rather than magnetic charge. By measuring how each area of the brain absorbs light, neuroscientists can infer activity of the brain.

DTI (diffusion tensor imaging): This is another technique that builds on the MRI. It measures the flow (diffusion) of water molecules within the brain, which shows connections between one area and another.

Variations within and between people make it difficult to know what someone is thinking via brain scans. This confirms the need for theory. Without an idea of what to look for, or what it might mean, the millions of data points from all brain images might lead to the same trap as earlier measurements of the skull—human bias.

8. Vygotsky stated that all adults teach children the skills expected by their society and culture. Apprenticeship in thinking is how Vygotsky described the more skilled members of the society acting as tutors or mentors to help a person develop skills. Guided participation is the method used by parents, teachers, and entire societies to teach novices (apprentices) the skills and habits expected within their culture.

9. The zone of proximal development is the set of skills, knowledge, and concepts that a learner is close to acquiring but cannot master without help. A mentor breaks a large task down into its parts and then motivates and assists the learner to achieve it, one step at a time. Some frustration is permitted, but the learner must be actively engaged and never passive or overwhelmed. Mentors continually push for more competence by urging the learner to try something just a little harder rather than make a large leap. Examples include a person helping another learn how to tie his or her shoes, swim, ride a bike, or ice skate.

10. Psychoanalytic theory identifies the first year of life as the oral stage, which occurs before the anal stage (years 1–3). Thus, psychoanalytic theorists believe that toilet training should be postponed until the child is cognitive, emotionally, and biologically ready—around age 2 for daytime training and age 3 for nighttime dryness. A behaviorist would argue that toilet training should occur whenever the parent (or adult) wishes to start, not at a particular age. Praise and reward should be used each time the child uses the toilet, as they will increase the likelihood that the child will successfully use the toilet in the future.

A cognitive theorist would suggest that a parent (or adult) wait until the child can understand reasons to urinate and defecate in the toilet.

A sociocultural theorist would emphasize the vast differences between one community and another. That is, different communities set their own guidelines for when and how to begin toilet training. Therefore, toilet training should reflect the values and expectations of the child's cultural environment.

11. According to evolutionary theory, every species has two long-standing, biologically

based drives: survival and reproduction. A basic idea from evolutionary theory is selective adaptation, which proposes that humans today react in ways that helped their ancestors' survival and reproduction long ago. Thus, some of the best qualities of people—cooperation, spirituality, and self-sacrifice—may have originated thousands of years ago, when groups of people survived because they took care of one another. The process of selective adaption works as follows: If one person happens to have a trait that makes survival more likely, the gene (or combination of genes) responsible for that trait is passed on to the next generation if that person lives long enough to reproduce. Anyone with such a fortunate genetic inheritance has a better chance than those without that gene to survive, mate, and bear many children—half of whom would inherit genes for the desirable trait.

	Good (5 pts.)	Fair (3 pts.)	Weak (1–0 pts.)

	the process		or the process

12. The approach taken by most developmentalists is to apply aspects of each of the various theories of development rather than adhering exclusively to one theory. Childhood aggression should be explained from at least two competing theories: psychoanalytic (e.g., inner drives), behaviorism (e.g., learned from observation), cognitive (e.g., beliefs that aggression is good or helpful), sociocultural (e.g., may need to be aggressive to be successful in one's culture), and evolutionary (e.g., aggression was an adaptive response among our ancestors or promoted survival).

aggression	three or more theories	two theories	one theory

13. Psychoanalytic theory has made scientists aware of the importance of social and emotional experiences during early childhood. Behavioral theory (or behaviorism) has shown the effect that immediate responses and associations have on human learning. Cognitive theory helps scientists understand how intellectual processes and thinking affect people's actions. Sociocultural theories show how one's culture, social interaction, and environment influence one's behaviors. Evolutionary theory suggests that human impulses need to be recognized before they can be guided.

1.	A is an explanation of facts and observations, or a set of concepts and ideas that organize the confusing mass of sensations that each of us encounters at every moment.
2.	A theory is a systematic statement of principles and generalizations that provides a framework for understanding how and why people change over time.
3.	Theories can produce hypotheses, generate discoveries, and offer practical
4.	Jason learned that emotions affect performance. From this, he developed the idea that students who are sad when they take a test will perform poorly, whereas those who are happy will perform better. In this example, Jason made a specific prediction that can be tested. This is known as a(n) ""
5.	In her developmental psychology course, Avery learned about techniques that can be used to reduce problem behavior in young children. She in turn implemented some of these techniques in her job as a child-care supervisor. This demonstrates the idea that theories offer
6.	A is an average or usual event or experience.
7.	Filial responsibility—the idea that adults should care for their aged parents—is a in most cultures.
8.	In Western cultures, it is a for brides to wear white at their weddings.
9.	is a theory that stresses the potential of all humans for good and the belief that all people have the same basic needs, regardless of culture, gender, or background.
10.	theories are comprehensive, enduring, and far-reaching.
11.	The foundation of psychoanalytic theory is inner drives, motives, and needs.
12.	According to Freud, the stage is the first stage of psychosexual development.

13.	According to Freud's theory, adolescence occurs during the stage of psychosexual development.
14.	is the psychoanalytic theorist who described eight developmental stages, each characterized by a particular challenge or developmental crisis.
15.	Erikson's first stages are closely related to Freud's stages.
16.	Erikson's stages emphasized, not sexual urges.
17.	Behaviorism is also called " theory."
18.	was the behavioral theorist who first described the process of conditioning.
19.	The learning process in which a meaningful stimulus is connected with a neutral stimulus is called ""
20.	One example of classical conditioning is, when past experiences with medical professionals conditioned a person to be anxious.
21.	After visiting the doctor's office several times and receiving a shot each time, Erin now tenses and cries when her mother pulls into the doctor's parking lot. Erin's response is an example of conditioning.
22.	was developed to study observable behavior objectively and scientifically.
23.	was the most influential North American proponent of behaviorism.
24.	In conditioning, a particular action is followed by something desired or by something unwanted.

25.	Two-year-old D'Angelo picks up his trains and puts them in the toy box. His father smiles and claps, exclaiming, "Good boy! You cleaned up your toys!" The next time D'Angelo plays with his trains, he eagerly cleans up, and his father responds the same way. In this example, praise is operating as a for D'Angelo.
26.	theory states that every individual learns many things through observation and imitation of other people.
27.	According to Bandura, occurs when people copy what they see others do.
28.	Tim watches his father mow the lawn. After a few minutes, Tim takes a toy lawnmower and begins following his father, row by row. Tim is his father's behavior.
29.	Piaget's stages of cognitive development include the sensorimotor, preoperational, concrete operational, and operational stages.
30.	According to Piaget, humans seek cognitive, or a state of mental balance.
31.	According to Piaget's theory of cognitive development, is when new experiences are reinterpreted to fit into old ideas.
32.	According to Piaget's theory of cognitive development, is when old ideas are restructured to include new experiences.
33.	theory was inspired by the input, programming, memory, and output of a computer.
34.	Information-processing theory focuses on the of thought—that is, when, why, and how neurons fire between a response.
35.	Regarding brain-imaging techniques, shows that the brains of newborns are more active when they hear the language that their mother spoke when they were in the womb than when they hear another language.

36.	The central thesis of theory is that human development results from the dynamic interaction between developing persons and their surrounding society.
37.	Vygotsky asserted that each person develops with the guidance of more skilled members of the society, who are tutors or mentors in a(n) in thinking.
38.	Vygotsky developed the concept of "," which is the method used by parents, teachers, and entire societies to teach novices the skills and habits expected within their culture.
39.	According to sociocultural theory, the is an imaginary area surrounding the learner that contains the skills, knowledge, and concepts that are close to being grasped but not yet reached.
40.	Mrs. Saxena is working with her toddler daughter, Arianna, on potty training. Each time Arianna uses the toilet, Mrs. Saxena lets her pick a small prize out of a treasure chest. Mrs. Saxena's strategy is consistent with the perspective.
41.	The basic idea of theory in development is that in order to understand the emotions, impulses, and habits of humans over the life span, it is important to understand how those same emotions, impulses, and habits developed within <i>Homo sapiens</i> over the past 100,000 years.
42.	Selective is the process by which living creatures (including people) adjust to their environment.
43.	Keta believes that breast-feeding is a personal choice. That is, the woman should be able to choose whether she breast-feeds her infant. Keta's belief is consistent with the perspective.
44.	Each theory, grand or newer, has received severe criticism theory has been criticized for being too subjective.
45.	theories bring an understanding of intellectual processes.

46.	Dr. Carson believes that human impulses need to be reorganized before they can be guided. Dr. Carson's beliefs are consistent with theories.
47.	Most developmentalists prefer a(n) perspective, choosing what they consider to be the best aspects of each theory.

1.	An explanation of facts and observations defined by a set of concepts and ideas that organize phenomena is called a "" A) hypothesis B) theory C) conclusion D) development
2.	A systematic statement of principles and generalizations that provides a framework for understanding how and why people change over time is called a "" A) hypothesis B) developmental theory C) conclusion D) stage
3.	Theories can do all the following EXCEPT A) produce hypotheses B) solve developmental problems C) generate discoveries D) offer practical guidance
4.	In class, Sam learned that some theorists link happiness to productivity. From this, he developed the idea that happy employees in a factory will produce more products per hour. In this example, Sam's theory led him to A) produce a hypothesis B) solve a developmental problem C) generate a discovery D) gain practical guidance
5.	Hannah theorized that sleep helps people behave in safer ways. She tested her theory by conducting an experiment. She manipulated the amount of sleep participants got and then tested their driving ability. Hannah learned that participants who got more sleep were safer drivers. In this example, Hannah's theory led her to A) replicate research B) solve a developmental problem C) generate a discovery D) change the behavior of many people

6.	he hof "of "of A) B) C)	y's 12-year-old son used to get out of bed easily and early on school days, but lately as been hard to wake. While reading a parenting book, Lilly came across the theory delayed phase of preference," which states that sleep patterns shift when young ple start to go through puberty. In this example, a theory helped Lilly design an experiment change her own behavior generate a discovery gain practical guidance
7.		is an average or usual event or experience.
		norm

	D)	fatency, phame, orar, anar, genitar
19.	asso	a stage of Freud's psychosexual theory of development is characterized by a conflict ciated with different parts of the body. According to Freud, how people experience resolve each conflict influences personality
		· · · · · · · · · · · · · · · · · · ·
	A)	throughout life, because early years provide the foundation of adult behavior
	B)	throughout life, only if some of the conflicts are successfully resolved
	C)	only in childhood, with new conflicts emerging later that shape adult identity
	D)	at a particular stage of development, also called a sensitive period
20.	Acco	ording to Freud's psychosexual theory, the stage centers around breastfeeding
		weaning.
	A)	
	B)	anal
	,	phallic
		genital
	D)	gentar
21.	Freu	d argued that the goal of a healthy life is to
	A)	connect spiritually with another person
	B)	follow moral codes set by society
	C)	avoid conflict and promote social harmony
	Ď)	love and to work

22.	and expanded his ideas, they agree on the importance of A) early childhood experiences and psychosexual conflicts B) psychosexual conflicts and the unconscious C) early childhood experiences and the unconscious D) psychosexual conflicts and stages of psychosexual development	16
23.	Unlike Freud, Erikson A) only described development in childhood B) believed that adult problems reflect childhood conflicts C) emphasized family and culture in his stages D) leaned toward the behaviorist perspective	
24.	Which psychoanalytic theorist identified unique stages of development from birth through late adulthood? A) Freud B) Piaget C) Skinner D) Erikson	
25.	Within Erikson's theory of psychosocial development, each of the developmental stage is characterized by a particular challenge, or a A) conflict negotiation B) developmental conflict C) developmental crisis D) resolution	es
26.	Which of Erikson's stages did he regard as particularly crucial for later development? A) initiative versus guilt B) intimacy versus isolation C) trust versus mistrust D) autonomy versus shame and doubt	
27.	Behaviorists believe that psychologists should focus on A) observable behaviors B) inner drives and motives C) a person's ideas and beliefs D) a person's sexual conflict	

28.	Behaviorism has also been referred to as " theory." A) conditioning B) learning C) modeling D) operant
29.	The process by which a response becomes linked to a particular stimulus is called ""
	A) psychoanalysisB) cognition
	C) observational learning
	D) conditioning
30.	Pavlov's experiments with dogs that salivated when they heard a specific noise without the presence of food provide an example of A) classical conditioning B) observational learning C) operant conditioning D) reinforcement
31.	When a person or animal learns to associate a neutral stimulus with a meaningful stimulus, gradually responding to the neutral stimulus in the same way as to the meaningful one, he or she is exhibiting A) classical conditioning B) observational learning C) operant conditioning D) modeling
32.	A balloon popped and made Bobby cry. It happened again when he was at a friend's birthday party. Now when Bobby sees a balloon, he starts to cry. According to the behaviorist perspective, Bobby cries in response to the balloon because of A) operant conditioning B) observational learning C) classical conditioning D) modeling

33.	The type of conditioning that Skinner identified is referred to as " conditioning." A) classical B) observational C) operant D) cognitive	
34.	Operant conditioning is also referred to as " conditioning." A) classical B) instrumental C) observational D) reinforcement	
35.	Dominique, age 14, dislikes school. Her parents were recently informed that Dominique has missed 12 days of school this quarter and has left school early on at least four occasions. Dominique's father has decided to drop his daughter off every morning and bick her up every afternoon to make sure she is attending school. Dominique is now attending school, but she has gotten into serious trouble on multiple occasions, leading to a five-day out-of-school suspension. Since Dominique dislikes school and prefers to skip rather than attend, the out-of-school suspension represents a A) reinforcement B) punishment C) conditioner D) norm	2
36.	The boss praises his hourly employees for their good work. The boss hopes that the braise encourages the employees to continue to work hard. In this example, the einforcement is A) the boss's praise B) worker productivity C) the boss D) an hourly wage	
37.	Any consequence that follows a behavior and makes a person likely to repeat that behavior is called a(n) " A) punishment" B) condition C) reinforcement O) observation	

38.	Theorists who promote classical conditioning believe that learned behavior is the result of, whereas theorists who promote operant conditioning believe that learned behavior is the result of A) the association between one stimulus and another; past reinforcement B) past reinforcement; the association between one stimulus and another C) observing another person's actions; past reinforcement D) the association between one stimulus and another; observing another person's actions
39.	Social learning theory indicates that learning occurs from A) the association between one stimulus and another B) past reinforcement C) observing and imitating others D) responding to a particular stimulus
40.	A person observes the actions of others and copies them. Social learning theorists would call this an example of "" A) classical conditioning B) operant conditioning C) modeling D) cognition
41.	Observational learning is also called "" A) classical conditioning B) operant conditioning C) modeling D) cognition
42.	Jimmy watches his friend kick a soccer ball into the goal. Later that day, Jimmy finds a soccer ball and proceeds to kick it into the goal. Jimmy most likely engaged in the same behavior as his friend due to A) classical conditioning B) modeling C) operant conditioning D) reinforcement

43.	EXC	modeling of behavior is more likely to occur when the model is all the following CEPT
		younger
		admired powerful
	D)	•
	,	
44.	Acc	ording to the text, social learning is particularly noticeable in
		infancy
		early adolescence
	,	late adolescence
	D)	early adulthood
45.	The	foundation of cognitive theory is
	,	observable behaviors
		inner drives and motives
	C)	
	D)	cultural influence
46.		was a cognitive theorist.
	,	Freud
	,	Watson
		Piaget
	D)	Vygotsky
47.	Wit	h regard to cognitive development, Piaget argued that is more revealing than
	A)	what children know; how they think
		how children think; what they know
	Ć)	the cultural context; what children know
	D)	what children know; their cultural context
48.	Pias	get's four stages of cognitive development, in order, are
	A)	formal operational, concrete operational, preoperational, and sensorimotor
	B)	preoperational, sensorimotor, formal operational, and concrete operational
	C)	sensorimotor, preoperational, concrete operational, and formal operational
	D)	sensorimotor, preoperational, formal operational, and concrete operational

49.	According to Piaget, intellectual advancement occurs because of cognitive A) learning B) resolution C) equilibrium D) modeling
50.	A state of mental balance in which people are not confused because they can use their existing thought processes to understand current experiences and ideas is called "" A) social learning B) conflict resolution C) cognitive equilibrium D) information processing
51.	Jenny has never seen a pear before today. As her mom hands it to her, she says that it is a fruit. Jenny knows that apples and bananas are fruits and that she likes eating them, so she has a reference for this new experience. Jenny is experiencing A) social learning B) operant conditioning C) guided participation D) cognitive equilibrium
52.	According to Piaget, when new experiences are interpreted to fit into old ideas, it is called "" A) learning B) assimilation C) equilibrium D) accommodation
53.	Sanjay has a small dog at home, so he knows about dogs. He is walking down the street and sees an animal walking toward him. The animal is very large; has four legs, fur, and a tail; and is barking. Sanjay knows that these are characteristics of a dog, given his knowledge of dogs. He quickly concludes that this animal is a dog. This example illustrates Piaget's concept of "" A) operations B) assimilation C) equilibrium D) accommodation

54.	According to Piaget, when old ideas are restructured to include new experience called "" A) learning B) assimilation C) equilibrium D) accommodation	nces, it is
55.	Sally has a dog at home, so she knows about dogs. She is walking down the sees an animal walking toward her. The animal has four legs, fur, and a tail. that these are characteristics of dogs. But the animal coming toward her is marking. Sally's mom tells her that the animal is a cat. Now when Sally sees with four legs, a tail, and fur, she will conclude it is a dog if it barks and a cameows, illustrating Piaget's concept of "" A) operations B) assimilation C) equilibrium D) accommodation	Sally knows leowing, not an animal
56.	With respect to Piaget's theory of cognitive development, the more difficult adaptation is A) assimilation B) accommodation C) sensorimotor behavior D) equilibrium	cognitive
57.	is a perspective that compares a human's thinking processes, by analogomputer's analysis of data. A) Social learning theory B) Information-processing theory C) Behaviorism D) Psychoanalytic theory	gy, to a

58.	 Within the information-processing perspective, which is the correct sequential order for producing cognition? A) The brain produces an output; input is picked up by the five senses; the brain reacts, connects, and stores memories. B) The brain reacts, connects, and stores memories; input is picked up by the five senses; the brain produces an output. C) Input is picked up by the five senses; the brain produces an output; the brain reacts, connects, and stores memories. D) Input is picked up by the five senses; the brain reacts, connects, and stores memories; the brain produces an output.
59.	Antonia has always had a difficult time remembering things. She visited a psychologist and underwent tests that concluded that the way she senses input and then stores the information is interfering with her ability to recall the information. This explanation for Antonia's memory difficulties is consistent with theory. A) psychoanalytic B) evolutionary C) social learning D) information-processing
60.	In the nineteenth and twentieth centuries, many scientists believed that bumps on the head reflected intelligence and character, a theory known as A) neurology B) phrenology C) anthropology D) ethology
	The measures electrical activity in the cortex. A) EEG B) ERP C) MRI D) fMRI
62.	Dr. House is a neurologist who evaluates individuals who have experienced brain injuries or have suspected brain damage. Dr. House often has his patients undergo testing that allows measurement of myelin, neurons, and fluid in the brain. Dr. House utilizes with his patients. A) PET B) DTI C) EEG D) MRI

63.	Which of the following neuroimaging techniques is almost impossible to use with children? A) fMRI B) EEG C) PET D) fNIRS
64.	Baby Elijah is participating in a study in which scientists are examining areas of the brain that are activated when they are exposed to music, speech, and random noise. This test, called, requires the individual to be fitted with a special cap connected to electrodes. A) fNIRS B) DTI C) fMRI D) PET
65.	is a test that is used by clinicians who want to individualize treatment and monitor progress. A) PET B) DTI C) fNIRS D) ERP
66.	Neuroscientists have discovered that the is not completely connected to the rest of the brain until about age 25. A) hippocampus B) prefrontal cortex C) amygdala D) brain stem
67.	Newer theories, unlike grand theories, are multicultural and multidisciplinary theory, for example, draws on anthropology. A) Psychoanalytic B) Information-processing C) Evolutionary D) Sociocultural

68.		e idea that human development results from the dynamic interaction between eloping persons and their surrounding society is the central thesis of	
	A)	information-processing	incory.
	B)	sociocultural	
	C)	•	
	D)	cognitive	
69.		ich cognitive theorist emphasized the cultural context?	
	A)	Piaget	
	B) C)	• • • • • • • • • • • • • • • • • • • •	
	D)	Erikson	
	,		
70.		gotsky used the term to describe how cognition is stimulated and dev ple by more skilled members of society.	eloped in
		zone of proximal development	
		guided participation	
		apprenticeship in thinking	
	D)	selective adaptation	
71.		gotsky used the term to describe the method used by parents, teachers re societies to teach novices the skills and habits expected within their culture.	
	A)	-	
	B)	* 1	
	C)		
	D)	selective adaptation	
72.		ly is helping her mom make a cake. Her mom helps her pick out the right in asure them, and mix them together. According to Vygotsky, Sally is engaging	-
	<u>A)</u>	 modeling	
	B)	guided participation	
	C)	operant conditioning	
	D)	selective adaptation	

73.	According to Vygotsky, the skills, knowledge, and concepts that the learner is close to acquiring but cannot yet master without help is referred to as "" A) the zone of proximal development B) guided participation C) operant conditioning D) selective adaptation
74.	According to Vygotsky's concept of the zone of proximal development, a mentor must avoid two opposite dangers: A) fear and anger B) boredom and failure C) shame and doubt D) competition and punishment
75.	Sociocultural theory is A) active B) passive C) unidirectional D) outdated
76.	Approaches to toilet training have changed over time. At one point, it was suggested to parents to postpone toilet training until the child was at least a year old to avoid serious personality problems later on. This view is most consistent with A) psychoanalytic theory B) cognitive theory C) behaviorism D) information-processing theory
77.	Approaches to toilet training have changed over time. At one point, it was suggested that parents toilet-train whenever they wished, using reinforcement as part of the training. This view is most consistent with A) psychoanalytic theory B) cognitive theory C) behaviorism D) information-processing theory

- 78. Different theories and diverse parental practices are associated with toilet training. According to the text, which is the best method for toilet training? A) It is best to start to toilet-train children before they turn 1 year old. B) Using reinforcements for toilet training works for all children. C) Children should decide when they want to be toilet-trained. D) There is no single best strategy for toilet training all children. 79. In order to understand the emotions, impulses, and habits of humans over the life span, it is important to understand how those same emotions, impulses, and habits developed within *Homo sapiens* over the past 100,000 years. This concept is consistent with _____ theory. A) psychoanalytic B) sociocultural C) information-processing D) evolutionary 80. Which of the following questions would be addressed by an evolutionary theorist? A) At what age do adolescents initiate sexual activity? How does social media affect self-esteem in young people? C) Why do pregnant women have morning sickness? D) What risk factors are associated with the development of Alzheimer's disease in late adulthood? 81. According to evolutionary theory, why are so many people afraid of snakes? A) because of daily life-threatening experiences B) because of unconscious memories of childhood experiences with spiders C) because they have learned by watching others react with fear to spiders D) because a fear of snakes helped our ancient ancestors survive
- 82. According to evolutionary theory, every species has two long-standing, biologically based drives: _____.
 - A) survival and reproduction
 - B) aggression and sex
 - C) hunger satiation and shelter
 - D) fear and aggression

83.	According to the hypothesis, menopause and female longevity are evolutionary adaptations arising from children's survival needs. A) selectivity B) sociocultural C) extended family D) grandmother
84.	The process by which living creatures (including people) adjust to their environment is referred to as "" A) reinforcement B) conditioning C) selective adaptation D) cognitive equilibrium
85.	is when genes for traits that aid survival and reproduction are selected over time to allow the species to thrive. A) Reinforcement B) Conditioning C) Selective adaptation D) Cognitive equilibrium
86.	Chris is helpful and cooperative and takes care of his family and friends. Aaron is selfish and arrogant and puts his needs before those of his family and friends. Whose traits are likely to be selected for future generations in order to meet the evolutionary goals of humans? A) Chris's B) Aaron's C) Both Chris's and Aaron's D) Neither Chris's nor Aaron's
87.	For centuries, men have needed women to be sexually faithful to ensure that her children are also his offspring. Which theory is most consistent with this explanation for faithfulness among romantic partners? A) eclectic theory B) evolutionary theory C) behaviorism D) sociocultural theory

88.	bond with him and facilitating favorable development. Da'Shay's belief is consistent with the perspective. A) psychoanalytic B) cognitive C) sociocultural D) universal
89.	Maria believes that it is her choice whether she wants to breast-feed her infant daughter. Maria has decided that breast-feeding will be too difficult once she returns to work full-time, so she plans to use formula instead. Maria's beliefs are consistent with the perspective. A) psychoanalytic B) cognitive C) sociocultural D) universal
90.	theories have made us aware of the impact of early-childhood experiences, remembered or not, on development. A) Psychoanalytic B) Cognitive C) Sociocultural D) Eclectic
91.	has/have shown the effect that immediate response, associations, and examples have on learning, moment by moment and over time. A) Psychoanalytic theories B) Cognitive theories C) Sociocultural theories D) Behaviorism
92.	theories have brought an understanding of intellectual processes and how our thoughts and beliefs affect every aspect of our development. A) Psychoanalytic B) Cognitive C) Sociocultural D) Eclectic

93.		_ theories have reminded us that development is embedded in a rich and		
	mult	ifaceted cultural context that is evident in every social interaction.		
	A)	Psychoanalytic		
	B)	Cognitive		
	C)	Sociocultural		
	D)	Evolutionary		
94.	Critics of sociocultural theory argue that it is			
	A)	too subjective		
	B)	too mechanistic		
	C)	neglectful of individual choices		
	D)	culturally biased		
95.	Critics of behaviorism argue that the theory			
	A)	is too subjective		
	B)	is too mechanistic		
	C)	neglects individuals		
	D)	undervalues emotions		
96.	The	approach taken by most developmentalists, in which they apply aspects of each of		
		various theories of development rather than adhering exclusively to one theory, is		
		red to as the perspective.		
	A)			
	B)	multidisciplinary		
	Ć)	self-selected		
	D)	multicontextual

1.	A developmental theory is a systematic statement of general principles that provides a framework for understanding how and why people change as they grow older. A) True B) False
2.	Theories undermine the development of hypotheses. A) True B) False
3.	A norm is an average or usual event or experience. A) True B) False
4.	The foundation of psychoanalytic theory is inner drives, motives, and unconscious needs. A) True B) False
5.	According to Freud, the first stage of psychosexual development during infancy is the anal stage. A) True B) False
6.	Erikson's stages of psychosocial development apply specifically to the childhood years. A) True B) False
7.	In classical conditioning, a meaningful stimulus becomes linked to a neutral stimulus. A) True B) False
8.	According to John Watson, psychologists should only study observable behavior. A) True B) False

9.	In operant conditioning, an individual follows a modeled behavior. A) True B) False
10.	Cognitive theory utilizes modeling. A) True B) False
11.	Piaget's first stage of cognitive development is the preoperational stage. A) True B) False
12.	Social learning theory compares a human's thinking processes to a computer's analysis of data. A) True B) False
13.	Newer theories on development tend to be multicultural and multidisciplinary. A) True B) False
14.	Sociocultural theory states that human development results from the dynamic interaction between a person's genes and his or her unconscious drives. A) True B) False
15.	A father utilizes the zone of proximal development when he helps his daughter learn how to ride a bike by herself through adjusting the level of support he provides to her. A) True B) False
16.	Evolutionary theory is based on the idea that thoughts and expectations affect actions. A) True B) False

- 17. According to evolutionary theory, every species has two long-standing, biologically based drives: survival and reproduction.
 - A) True
 - B) False
- 18. Modern mating patterns have been explained from an evolutionary perspective.
 - A) True
 - B) False
- 19. Developmentalists who subscribe to the eclectic perspective select what they consider to be the best aspects of each theory to explain development.
 - A) True
 - B) False
