CHAPTER STUDY OBJECTIVES

1. **Explain what an account is and how it helps in the recording process.** An account is a record of increases and decreases in specific asset, liability, and stockholders' equity items.
2. **Define debits and credits and explain their use in recording business transactions.** The terms debit and credit are synonymous with left and right. Assets, dividends, and expenses are increased by debits and decreased by credits. Liabilities, common stock, retained earnings and revenues are increased by credits and decreased by debits.
3. **Identify the basic steps in the recording process.** The basic steps in the recording process are: (a) analyze each transaction for its effects on the accounts, (b) enter the transaction information in a journal, (c) transfer the journal information to the appropriate accounts in the ledger.
4. **Explain what a journal is and how it helps in the recording process.** The initial accounting record of a transaction is entered in a journal before the data are entered in the accounts. A journal (a) discloses in one place the complete effects of a transaction, (b) provides a chronological record of transactions, and (c) prevents or locates errors because the debit and credit amounts for each entry can be readily compared.
5. **Explain what a ledger is and how it helps in the recording process.** The ledger is the entire group of accounts maintained by a company. The ledger keeps in one place all the information about changes in specific account balances.
6. **Explain what posting is and how it helps in the recording process.** Posting is the transfer of journal entries to the ledger accounts. This phase of the recording process accumulates the effects of journalized transactions in the individual accounts.
7. **Prepare a trial balance and explain its purposes.** A trial balance is a list of accounts and their balances at a given time. Its primary purpose is to prove the equality of debits and credits after posting. A trial balance also uncovers errors in journalizing and posting and is useful in preparing financial statements.

TRUE-FALSE STATEMENTS

1. A new account is opened for each transaction entered into by a business firm.
2. The recording process becomes more efficient and informative if all transactions are recorded in one account.
3. When the volume of transactions is large, recording them in tabular form is more efficient than using journals and ledgers.
4. An account is often referred to as a T-account because of the way it is constructed.
5. A debit to an account indicates an increase in that account.
6. If a revenue account is credited, the revenue account is increased.
7. The normal balance of all accounts is a debit.
8. Debit and credit can be interpreted to mean increase and decrease, respectively.
9. The double-entry system of accounting refers to the placement of a double line at the end of a column of figures.
10. A credit balance in a liability account indicates that an error in recording has occurred.
11. The dividends account is a subdivision of the returned earnings account and appears as an expense on the income statement.
12. Revenues are a subdivision of stockholders' equity.
13. Under the double-entry system, revenues must always equal expenses.
14. Transactions are entered in the ledger first and then they are analyzed in terms of their effect on the accounts.
15. Business documents can provide evidence that a transaction has occurred.
16. Each transaction must be analyzed in terms of its effect on the accounts before it can be recorded in a journal.
17. Transactions are entered in the ledger accounts and then transferred to journals.
18. All business transactions must be entered first in the general ledger.
19. A simple journal entry requires only one debit to an account and one credit to an account.
20. A compound journal entry requires several debits to one account and several credits to one account.
21. Transactions are recorded in alphabetic order in a journal.
22. A journal is also known as a book of original entry.

2 - 6 Test Bank for Financial Accounting, Sixth Edition

23. The complete effect of a transaction on the accounts is disclosed in the journal.
24. The account titles used in journalizing transactions need **not** be identical to the account titles in the ledger.
25. The chart of accounts is a special ledger used in accounting systems.
26. A general ledger should be arranged in the order in which accounts are presented in the financial statements, beginning with the balance sheet accounts.
27. The number and types of accounts used by different business enterprises are the same if generally accepted accounting principles are being followed by the enterprises.
28. Posting is the process of proving the equality of debits and credits in the trial balance.
29. After a transaction has been posted, the reference column in the journal should **not** be blank.
30. A trial balance does **not** prove that all transactions have been recorded or that the ledger is correct.

Additional True-False Questions

31. The double-entry system is a logical method for recording transactions and results in equal debits and credits for each transaction.
32. The normal balance of an expense is a credit.
33. The journal provides a chronological record of transactions.
34. The ledger is merely a bookkeeping device and therefore does **not** provide much useful data for management.
35. The chart of accounts is a listing of the accounts and the account numbers which identify their location in the ledger.
36. The primary purpose of a trial balance is to prove the mathematical equality of the debits and credits after posting.
37. The trial balance will **not** balance when incorrect account titles are used in journalizing or posting.

The bookkeeper for Reagan Service Inc. made a number of errors in journalizing and posting as described below:

1. A debit posting to accounts receivable for \$500 was omitted.
2. A payment of accounts payable for \$600 was credited to cash and debited to accounts receivable.
3. A credit to accounts receivable for \$650 was posted as \$65.
4. A cash purchase of equipment for \$693 was journalized as a debit to equipment and a credit to notes payable. The credit posting was made for \$639.
5. A debit posting of \$300 for purchase of supplies was credited to supplies.
6. A debit to repairs expense for \$491 was posted as \$419.
7. A debit posting for wages expense for \$900 was made twice.
8. A cash purchase of supplies for \$700 was journalized and posted as a debit to supplies for \$70 and a credit to cash for \$70.

Some of the following errors would cause the debit and credit columns of the trial balance to have unequal totals. For each of the four cases, state whether the error would cause unequal totals in the trial balance. If the error causes unequal totals, indicate the amount of difference between the columns and state whether the debit or credit is larger. Each case is to be considered independently of the others.

1. A payment of \$800 to a creditor was recorded by a debit to Accounts Payable of \$80 and a credit to Cash of \$800.
2. A \$480 payment for a printer was recorded by a debit to Computer Equipment of \$48 and a credit to Cash for \$48.
3. An account receivable in the amount of \$2,500 was collected in full. The collection was recorded by a debit to Cash for \$2,500 and a debit to Accounts Payable for \$2,500.
4. An account payable was paid by issuing a check for \$800. The payment was recorded by debiting Accounts Payable \$800 and crediting Accounts Receivable \$800.

Solution 180 (5 min.)

1. The trial balance totals will be unequal. The credit column will be \$720 larger than the debit column.
2. The trial balance totals will be misstated but not unequal.

Solution 180 (cont.)

3. The trial balance totals will be unequal. The debit column will be \$5,000 larger than the credit column.

4. The trial balance totals will be misstated but not unequal.

SHORT-ANSWER ESSAY QUESTIONS

S-A E 195

An account is an important accounting record where financial information is stored until needed. Briefly explain (1) the nature of an account, (2) the different types of accounts, and (3) the manner in which an account is increased and decreased and its normal balance.

Solution 195

An account is an individual accounting record of increases and decreases in specific asset, liability, and stockholders' equity accounts. In its simplest form, an account consists of three parts: (1) the title of the account, (2) a left or debit side, and (3) a right or credit side (it resembles the letter T). Accounts are classified as asset, liability, stockholders' equity, revenue, and expense. Accounts with a normal debit balance, such as assets and expenses, are increased when debited and decreased when credited. Accounts with a normal credit balance, such as liabilities and revenues, are increased when credited and decreased when debited.

S-A E 196

Describe the process of preparing a trial balance. What is the purpose of preparing a trial balance? If a trial balance does not balance, identify what might be the reasons why it does not balance. If the trial balance does balance, does that insure that the ledger accounts are correct? Explain.

Solution 196

The process of preparing a trial balance consists of (1) listing the account titles and their debit or credit balances in the order in which they appear in the general ledger, (2) totaling the debit and credit columns, and (3) proving the equality of the total debits and total credits. The primary purpose of the trial balance is to prove the equality of the debits and credits after posting. A trial balance also uncovers errors in journalizing and posting because errors in journalizing and posting cause a trial balance not to balance. A trial balance does not prove that all transactions have been recorded or that the ledger is correct. The trial balance may balance even when (1) an entire transaction is not journalized, (2) a correct journal entry is not posted, (3) a journal entry is posted twice, (4) incorrect accounts are used in journalizing or posting, or (5) offsetting errors are made in recording the amount of a transaction or posting to the ledger.

S-A E 197

During a study session, a classmate states that it is not necessary to make journal entries and then post them to the ledger. She states that it is sufficient to analyze the transaction and simply record the information in T-accounts.

What is your response to this statement? Be brief, yet concise.

Solution 197

You have a very good point regarding the steps of the accounting cycle. If a company only has a few transactions, it might be possible to simply analyze them and then record each in T-accounts. However, nearly all businesses have many transactions each day. There must be a systematic way to process these transactions. The steps of the accounting cycle represent this process. After analyzing each transaction, a journal entry needs to be prepared. The journal represents a chronological listing of every transaction for a business. This allows users to review past transactions. Your approach does not leave a trail that can be reviewed at a later date. Once the journal entries are made, posting allows each line of the journal to be transferred into the ledger. This process increases and decreases individual accounts in the ledger. At the end of the accounting period, the balance of each account is determined and the trial balance is prepared.

Based on your approach, if someone saw a credit to cash for \$10,000 and wondered what the debit was, that person would have to go through every ledger account to locate the corresponding debit. By having a general journal, the person can view the entire transaction, thus easily seeing the account that was debited.

Your approach may work for a very simple business, but it would result in problems for the majority of businesses and accountants.

S-A E 198 (Ethics)

Jim Coleman, Jr. was appointed the manager of Maris Properties, a recently formed company that manages residential rental properties. Linda Grider is the accountant. She prepared a chart of accounts based on an analysis of the expenditures of the company. One of the largest expense categories is Travel and Entertainment. Mr. Coleman believes that it is important to maintain a presence in the social life of the city. In this, he sharply differs from his father, Jim Coleman, Sr. The elder Mr. Coleman has set up Maris Properties in order to test his son's management skills before allowing him to manage the more lucrative commercial property business. Mr. Coleman, Sr. provided the capital for Maris, and maintains close contact with the company. He allowed his son, however, to hire his own employees.

Mr. Coleman has asked Ms. Grider to change the name of the Travel and Entertainment account to Property Development. He hopes to deflect his father's attention away from the amount he has spent on travel and entertainment until he has proven that his methods work. When Ms. Grider resisted, he reminded her that he, not his father, hired her. He also reminded her that she had been enthusiastic about his business plans when she was hired.

Required:

1. Who are the stakeholders in this situation?
2. Should Ms. Grider agree to the change in the Travel and Entertainment account to Property Development? Explain.

Solution 198

1. The stakeholders in this situation include
 - Mr. Coleman, Jr.
 - Linda Grider
 - Mr. Coleman, Sr.
 - Bankers and others who might rely on the financial statements

Solution 198 (cont.)

2. Ms. Grider definitely should not agree to the name change. The intention of the person making the change is to deceive someone who has a right to know the affairs of the business, fully and completely. Though Ms. Grider was hired by Mr. Coleman, Jr., and though she may agree with his business methods, she cannot be a party to such deceit.

S-A E 199 (Communication)

A classmate is considering dropping his accounting class because he cannot understand the rules of debits and credits.

- a. Can the student be successful in the course without an understanding of the rules of debits and credits?
- b. Explain the rules of debits and credits in a way that will help him understand them.

Solution 199

- a. Accounting is based on the double-entry system. This system records the dual effect of each transaction in the appropriate accounts, thus keeping the accounting equation in balance. Each transaction is analyzed and recorded using this dual effect system. If you do not have this basic understanding, the remaining chapters will become increasingly more difficult. You will not have the ability to make journal entries for the many new topics in these upcoming chapters.
- b. You may be trying to memorize the rules of debits and credits, only to discover that this does not work. Here are some other ways to master this very important topic:
 - Make sure that you understand the accounting equation. Assets equal the total of liabilities and stockholders' equity. Stockholders' equity is not an account but rather a group of accounts that includes common stock, retained earnings, revenues, expenses, and dividends. Common stock, retained earnings, and revenues cause stockholders' equity to increase while expenses and dividends cause stockholders' equity to decrease.
 - Next, make sure that you understand the accounting meaning of the terms debits and credits. For accounting, debit means left and credit means right. Don't try to add any more to these definitions.
 - Then, work with the rules of debits and credits. These rules determine whether a debit or credit increases or decreases an account. Start with assets. Assets increase with a debit and thus decrease with a credit. Think about the cash account—when cash is received, the account is increased with a debit. When cash is paid, the account is decreased with a credit. The remaining accounts are on the right side of the equal sign in the accounting equation. All of the other rules of debits and credits keep the equation in balance. Liabilities, common stock, retained earnings, and revenues are all increased with credits. Expenses and dividends are the two accounts that cause stockholders' equity to decrease, thus they must be increased with a debit.
