Elizabeth Hicks, Douglas College

Michelle Young, CPA

Chapter 9 Property, Plant and Equipment and Intangibles

Chapter Opening Critical Thinking Challenge Questions*

You are asked by the CFO of YVR to evaluate the newest capital asset, the Airside Operations Building at YVR, and to break it into major components for depreciation purposes. Identify at least five major components and determine an expected life for each of those components.

Components of the Airside Operations Building could include:

1. Building exterior walls	40 years
2. Roofing	25 years
3. Pavement	15 years
4. Landscaping	10 years
5. Electrical Components	15 years
6. Flooring	15 years
7. Plumbing	15 years
8. Furniture and Fixtures	15 years
9. Fire Equipment	20 years
10. Snow Removal Equipment	20 years

***The Chapter 9 Critical Thinking Challenge questions are asked at the beginning of this chapter. Students are reminded at the conclusion of the chapter to refer to the Critical Thinking Challenge questions at the beginning of the chapter. The solutions to the Critical Thinking Challenge questions are available here in the Solutions Manual and accessible to students at Connect.**

Concept Review Questions

- 1. A property, plant and equipment asset is long-lived in that it has a service life of longer than one accounting period; it is used in the production or sale of products or services. It is different from other assets such as receivables or inventory in that the property, plant and equipment is used within the operations of business to generate profit, whereas inventory is purchased or manufactured for resale. Receivables represent the amounts due from customers based on past transactions.**
- 2. Land held for future expansion is classified as a long-term investment. It is not a property, plant and equipment asset because it is not being used in the production or sale of other assets or services.**
- 3. The cost of a property, plant and equipment asset includes all normal, reasonable, and necessary costs of getting the asset in place and ready to use. For example, cost includes such items as the invoice price paid, freight costs, non refundable sales taxes (PST, HST) and all costs incurred related to installing and testing an asset before it is put into use.**
- 4. Land is an asset with an unlimited life and, therefore, is not subject to depreciation. Land improvements refer to items such as fencing, parking lots surfaces, landscape lighting and have limited lives and are depreciated over their useful lives.**
- 5. No. The Accumulated Depreciation, Machinery account is a contra asset account with a credit balance that does not represent cash or any other funds. Funds available for buying machinery would be shown on the balance sheet as liquid assets with debit balances, such as the account Cash and Cash Equivalents. The balance of the Accumulated Depreciation, Machinery account shows the portion of the machinery's original cost that has been charged to depreciation expense, and gives some indication of how soon the asset will need to be replaced.**
- 6. Revenue expenditures, such as repairs, are made to keep a plant and equipment asset in normal, good operating condition, and should be charged to expense of the current period. Capital expenditures are made to extend the service potential or the life of a plant and equipment asset beyond the original estimated life and are charged to the plant and equipment asset account. After incurring a capital expenditure, a depreciation policy also needs to be established. 7. Because the \$75 cost of the plant and equipment asset is not likely to be material to the users of the financial statements, the materiality principle justifies charging it to expense.**
- 8. Danier Leather did not report any gains or losses on disposal of assets for its year ended June 28, 2014. However, the corporation did have an Impairment loss on property and equipment of \$663,000.**
- 9. A company might sell or exchange an asset when it reaches the end of its useful life, or if it becomes inadequate or obsolete, or because the company has changed its business plans. An asset may also be damaged or destroyed by fire or some other accident.**
- 10. An intangible asset has no physical existence. Its value comes from the unique legal and contractual rights held by its owner.**

- 11. Types of intangible assets are patents, copyrights, leaseholds, drilling rights, and trademarks.**
- 12. WestJet reported \$60,623,000 as Intangible assets at December 31, 2014.**
- 13. A business can only record goodwill when the price paid for a company being purchased exceeds the fair market value of this company's net assets (assets minus liabilities) if purchased separately.**
- 14. Westjet did not report any Goodwill at December 31, 2014.**
- 15. When an asset is constructed, such as the development of a new runway, all costs for construction-related materials and labour costs can be capitalized. Also any electricity and utilities consumed relating to the project, plus a reasonable amount for depreciation on any equipment used during construction. Other permitted costs include design fees, building materials and any interest charges on debt outstanding during the period of construction incurred to finance the project.**

QUICK STUDY

Quick Study 9-1 (5 minutes)

$$\$18,000 + \$180,000 + \$3,000 + \$600 = \underline{\underline{\$201,600}}$$

Quick Study 9-2 (10 minutes)

1. (a) R
(b) C
(c) R
(d) C

2.

(a)			
Mar. 15	Repairs Expense	120	
	Accounts Payable.....		120

	Accounts Payable.....		200
	<i>To record repairs.</i>		
(d)			
Mar. 15	Office Building	175,000	
	Accounts Payable.....		175,000
	<i>To record capital expenditure.</i>		

Quick Study 9-3 (10 minutes)

PPE Item	(a) Appraised Values	(b) Ratio of Individual Appraised Value to Total Appraised Value (a) ÷ Total Appraised Value	(c) Cost Allocation (b) x Total Actual Cost
Land.....	\$ 320,000	320,000 ÷ 500,000 = .64 or 64%	\$ 345,600 ¹
Building	<u>180,000</u>	180,000 ÷ 500,000 = .36 or 36%	<u>194,400</u> ²
Totals.....	<u>\$ 500,000</u>		<u>\$ 540,000</u>

1. $64\% \times 540,000 = 345,600$
2. $36\% \times 540,000 = 194,400$

2017

Apr. 14	Land	345,600	
	Building	194,400	
	Cash		85,000
	Notes Payable.....		455,000
	<i>To record purchase of land and building.</i>		

Quick Study 9-4 (10 minutes)

**TechCom
Partial Balance Sheet
October 31, 2017**

Assets

Current assets:

Cash		\$ 9,000	
Accounts receivable.....	\$16,400		
Less: Allowance for doubtful accounts	<u>800</u>	<u>15,600</u>	
Total current assets.....			\$ 24,600

Property, plant and equipment:

Land.....		\$48,000	
Vehicles.....	\$62,000		
Less: Accumulated depreciation	<u>13,800</u>	48,200	
Equipment.....	\$25,000		
Less: Accumulated depreciation	<u>3,800</u>	<u>21,200</u>	
Total property, plant and equipment.....			117,400

Intangible assets:

Patent	\$20,100		
Less: Accumulated amortization, patent	<u>3,100</u>		<u>17,000</u>
Total assets			<u>\$159,000</u>

Quick Study 9-5 (10 minutes)

$(\$55,900 - \$1,900)/4 = \underline{\$13,500/\text{year}}$

Quick Study 9-6 (10 minutes)

$\text{Rate per copy} = (\$45,000 - \$5,000)/4,000,000 \text{ copies} = \underline{\$0.01/\text{copy}}$

Year	Calculation	Annual Depreciation
2017	$\$.01 \times 650,000 =$	\$6,500
2018	$\$.01 \times 798,000 =$	7,980
2019	$\$.01 \times 424,000 =$	4,240
2020	$\$.01 \times 935,000 =$	9,350
2021	$\$.01 \times 1,193,000 =$	<u>11,930</u>
		<u>\$40,000</u>

Quick Study 9-7 (10 minutes)

$\text{Annual rate of depreciation} = 2/5 = .40 \text{ or } 40\% \text{ per year}$

Year	Calculation	Annual Depreciation
2017	$40\% \times \$86,000 =$	\$34,400
2018	$40\% \times (\$86,000 - \$34,400) =$	20,640
2019	$40\% \times (\$86,000 - \$34,400 - \$20,640) =$	12,384
2020	$40\% \times (\$86,000 - \$34,400 - \$20,640 - \$12,384) =$	2,576*
2021		<u>0</u>
		<u>\$70,000</u>

*The calculation shows \$7,430 of depreciation but that amount would cause accumulated depreciation to exceed the maximum allowed of cost less residual ($\$86,000 - \$16,000 = \$70,000$). Therefore, the depreciation for 2020 must be adjusted to \$2,576.

Quick Study 9-8 (10 minutes)

Computer panel:

\$4,000/8 years = \$500 depreciation

Dry-cleaning drum:

\$70,000 - \$5,000 = \$65,000/400,000 garments = \$0.1625/garment;

\$0.1625/garment × 62,000 garments = \$10,075 depreciation

Stainless steel housing:

\$85,000 - \$10,000 = \$75,000/20 years = \$3,750 depreciation

Miscellaneous parts:

\$26,000/2 years = \$13,000 depreciation

Total depreciation on the dry cleaning equipment for 2017= \$500 + \$10,075 + \$3,750 + \$13,000 = \$27,325

Quick Study 9-9 (10 minutes)

	<u>2017</u>	<u>2018</u>
a.	\$5,000	\$6,000
b.	\$3,000	\$6,000

Calculations:

a. $\frac{60,000 - 0}{10 \text{ years}} = 6,000/\text{year} \times 10/12 = 5,000$

b. $6,000/\text{year} \times 6/12 = 3,000$

Quick Study 9-10 (10 minutes)

	<u>2017</u>	<u>2018</u>
a.	\$10,000	\$10,000
b.	\$6,000	\$10,800

Calculations:

a. $2/10 = .2$ or 20%; $20\% \times 60,000 = 12,000 \times 10/12 = 10,000$ for 2017

$20\% \times (60,000 - 10,000) = 10,000$ for 2018

b. $20\% \times 60,000 = 12,000 \times 6/12 = 6,000$ for 2017

$20\% \times (60,000 - 6,000) = 10,800$ for 2018

Quick Study 9-11 (10 minutes)

	<u>2017</u>	<u>2018</u>
a.	10,000	14,000
b.	10,000	14,000

Calculations:

$75,000 - 15,000 = 60,000/120,000 = \0.50 depreciation expense per unit produced
 $\$0.50 \times 20,000 = \$10,000$ for 2017; $\$0.50 \times 28,000 = \$14,000$ for 2018

NOTE: *The units-of-production method is a usage-based method as opposed to a time-based method (such as straight-line and double-declining-balance) and therefore partial periods do not affect the calculations.*

Quick Study 9-12 (10 minutes)

$[(\$35,720 - \$11,820^1) - \$1,570] / 7^2$ years remaining = **\$3,190**

1. $(\$35,720 - \$4,200) / 8 = \$3,940/\text{year} \times 3 \text{ years} = \$11,820$
 2. $10 - 3 = 7$

Quick Study 9-13 (10 minutes)

2017

Jan. 3	Barbecue – Rotisserie.....	1,000	
	Cash.....		1,000
	<i>To record the purchase of electronic rotisserie.</i>		

Dec. 31	Depreciation Expense, Barbecue.....	1,560	
	Accumulated Depreciation, Barbecue.....		1,560
	<i>To record revised depreciation on the barbecue caused by the addition of a rotisserie; $\\$7,000 - \\$200 = \\$6,800 \div 5 \text{ years} = \\$1,360$ PLUS $\\$1,000 \div 5 \text{ years} = \\200; Total depreciation = $\\$1,360 + \\$200 = \\$1,560$.</i>		

Quick Study 9-14 (10 minutes)

Impairment losses occurred on the computer and the furniture in the amounts of \$1,500 and \$21,000, respectively.

Calculations:

Asset	Cost	Accumulated Depreciation	Book Value	Recoverable Amount	Impairment Loss
Building	\$1,200,000	\$465,000	\$735,000	\$735,000	N/A
Computer	3,500	1,800	1,700	200	\$ 1,500
Furniture	79,000	53,000	26,000	5,000	21,000
Land	630,000	0	630,000	790,000	N/A
Machine	284,000	117,000	167,000	172,000	N/A

Quick Study 9-15 (10 minutes)

a.

2017

Oct. 1	Accumulated Depreciation, Equipment.....	39,000	
	Cash.....	17,000	
	Equipment		56,000
	<i>To record sale of equipment.</i>		

b.

Oct. 1	Accumulated Depreciation, Machinery	96,000	
	Cash.....	27,000	
	Machinery		109,000
	Gain on Disposal.....		14,000
	<i>To record sale of equipment.</i>		

c.

Oct. 1	Accumulated Depreciation, Truck	33,000	
	Cash.....	11,000	
	Loss on disposal	4,000	
	Delivery truck		48,000
	<i>To record sale of equipment.</i>		

d.

Oct. 1	Accumulated Depreciation, Furniture	21,000	
	Loss on disposal	5,000	
	Furniture.....		26,000
	<i>To record disposal of equipment.</i>		

Quick Study 9-16 (10 minutes)

2017

Dec 31	Accumulated Depreciation, Automobile	13,500	
	Computer*	5,800	
	Automobile		15,000
	Cash		2,750
	Gain on Disposal		1,550

To record exchange.

*Computer = FV of assets received = \$5,800 as given

Quick Study 9-17 (15 minutes)

2017

Mar. 1	Accumulated Depreciation, Machine (old)	36,000	
	Machine (new) ²	117,000	
	Cash ¹		63,000
	Machine (old)		90,000

To record exchange of machines.

1. *Cash paid = \$123,000 - \$60,000 = \$63,000*

2. *Machine (new) = \$63,000 cash paid + \$54,000 book value of old = \$117,000*

Quick Study 9-18 (10 minutes)

2017

Jan. 4	Franchise	95,000	
	Cash		95,000

To record purchase of franchise.

Dec. 31	Amortization Expense, Franchise	9,500	
	Accumulated Amortization, Franchise		9,500

*To record amortization of franchise;
\$95,000/10 years = \$9,500 per year*

Quick Study 9-19 (10 minutes)

2017

Oct. 1	Mineral Rights	35,000,000	
	Water Rights	4,000,000	
	Cash		9,000,000
	Long-Term Note Payable		30,000,000
	<i>To record the purchase of intangibles.</i>		
Dec. 31	Amortization Expense, Mineral Rights	875,000	
	Accumulated Amortization, Mineral Rights		875,000
	<i>To record amortization of mineral rights;</i>		
	<i>\$35,000,000 ÷ 10 years = \$3,500,000/year;</i>		
	<i>\$3,500,000/year × 3/12 = \$875,000.</i>		
31	Amortization Expense, Water Rights	100,000	
	Accumulated Amortization, Water Rights		100,000
	<i>To record amortization of water rights;</i>		
	<i>\$4,000,000 ÷ 10 years = \$400,000/year;</i>		
	<i>\$400,000/year × 3/12 = \$100,000.</i>		

***Quick Study 9-20 (20 minutes)**

Motor (old)	$\$45,000 - \$5,000 = \$40,000 \div 10 \text{ yrs} \times 8/12 =$	\$ 2,667
Motor (new)	$\$60,000 - \$10,000 = \$50,000 \div 8 \text{ yrs} \times 4/12 =$	2,083
Metal housing	$\$68,000 - \$15,000 = \$53,000 \div 25 \text{ yrs} =$	2,120
Misc. parts	$\$15,000 \div 5 \text{ yrs} =$	<u>3,000</u>
Total depreciation expense to be recorded on the machine for 2017 =		<u>\$ 9,870</u>

EXERCISES

Exercise 9-1 (10 minutes)

Invoice cost	\$15,000
Freight costs	260
Steel mounting	795
Assembly	375
Raw materials for testing.....	120
Less: discount (\$15,000 × 2%)	<u>300</u>
Total acquisition costs.....	<u>\$16,250</u>

Note: The \$190 repairs are an expense and therefore not capitalized.

Exercise 9-2 (15 minutes)

Cost of land:

Purchase price for land.....	\$1,200,000
Purchase price for old building.....	480,000
Demolition costs for old building.....	75,000
Levelling the lot.....	<u>105,000</u>
Total cost of land.....	<u>\$1,860,000</u>

Cost of new building:

Construction costs.....	\$2,880,000
Less: Cost of land improvements*	<u>215,000</u>
Cost of new building	<u>\$2,665,000</u>

**The land improvements are a distinct PPE asset that depreciates at a different rate than the building. Therefore it should be debited to an account separate from the building.*

Journal entry:

2017

Mar. 10	Land	1,860,000	
	Land Improvements	215,000	
	Building	2,665,000	
	Cash		4,740,000
	<i>To record costs of plant assets.</i>		

Exercise 9-3 (15 minutes)

Allocation of total cost:

	(a)	(b)	(c)
PPE Asset	Appraised Values	Ratio of Individual Appraised Value to Total Appraised Value (a) ÷ Total Appraised Value	Cost Allocation (b) x Total Actual Cost
Land	\$249,480	$249,480 \div 594,000 = .42$ or 42%	\$ 244,346 ²
Land Imprv.	83,160	$83,160 \div 594,000 = .14$ or 14%	81,448 ³
Building	<u>261,360</u>	$261,360 \div 594,000 = .44$ or 44%	<u>255,981</u> ⁴
Totals	<u>\$594,000</u>		<u>\$ 581,775</u> ¹

1. $552,375 + 29,400 = 581,775$
2. $42\% \times 581,775 = 244,346$
3. $14\% \times 581,775 = 81,448$
4. $44\% \times 581,775 = 255,981$

Journal entry:

2017			
Apr. 12	Land	244,346	
	Land Improvements	81,448	
	Building	255,981	
	Cash		581,775
	<i>To record costs of lump-sum purchase.</i>		

Exercise 9-4 (20 minutes)

2017

Jan. 1	Land	1,296,000	
	Building	1,512,000	
	Equipment	1,123,200	
	Tools	388,800	
	Cash		1,104,000
	Notes Payable		3,216,000
	<i>To record lump-sum purchase.</i>		

Calculations:

PPE Asset	(a)	(b)	(c)
	Appraised Values	Ratio of Individual Appraised Value to Total Appraised Value <i>(a) ÷ Total Appraised Value</i>	Cost Allocation <i>(b) x Total Actual Cost</i>
Land	\$ 1,152,000	1,152,000 ÷ 3,840,000 = .30 or 30%	\$ 1,296,000 ¹
Building	1,344,000	1,344,000 ÷ 3,840,000 = .35 or 35%	1,512,000 ²
Equipment	998,400	998,400 ÷ 3,840,000 = .26 or 26%	1,123,200 ³
Tools	<u>345,600</u>	345,600 ÷ 3,840,000 = .09 or 9%	<u>388,800</u> ⁴
Totals	<u>\$ 3,840,000</u>		<u>\$ 4,320,000</u>

1. 30% x 4,320,000 = 1,296,000
2. 35% x 4,320,000 = 1,512,000
3. 26% x 4,320,000 = 1,123,200
4. 9% x 4,320,000 = 388,800

Exercise 9-5 (10 minutes)

2017

Jan 1	Truck		63,000	
		Cash		63,000

Calculation:

$$37,500 + 13,500 + 6,750 + 5,250 = 63,000$$

Jan 4	Prepaid insurance		3,600	
	Gas expense		180	
	Cash	3,780		

2017

Dec. 31	Depreciation Expense, Truck		11,100	
	Accumulated Depreciation, Truck			11,100

To record depreciation.

Calculation:

$$[(37,500 + 13,500 + 6,750 + 5,250) - 7,500] / 5 \text{ years} = 11,100$$

Note: Insurance expense entries could also be made, to move from prepaid insurance, although not required in question.

Exercise 9-6 (15 minutes)

	(a)	(b)	(c)
Year	Straight-line	Double-declining-balance (Rate = $2/4 = .50$ or 50%)	Units-of-production (Rate = $[(169,200 - 24,000)/181,500] = .80/\text{unit}$)
2017	36,300 ¹	$50\% \times 169,200 = 84,600$	30,640 ($.80 \times 38,300$)
2018	36,300	$50\% \times (169,200 - 84,600) = 42,300$	32,920 ($.80 \times 41,150$)
2019	36,300	\$18,300 ²	42,080 ($.80 \times 52,600$)
2020	36,300	0	39,560 ³

1. $(169,200 - 24,000)/4 = 36,300/\text{year}$

2. Maximum depreciation is limited to \$145,200 which is cost less residual ($\$169,200 - \$24,000$) therefore depreciation for 2019 is \$18,300 calculated as $\$145,200 - \$126,900$ accumulated depreciation recorded to date.

3. Maximum depreciation is limited to \$145,200 which is cost less residual ($\$169,200 - \$24,000$) therefore depreciation for 2020 is \$39,560 calculated as $\$145,200 - \$105,640$ accumulated depreciation recorded to date.

Exercise 9-7 (15 minutes)

- a. $(238,400 - 46,400)/5 = \$38,400$
- b. Rate = $2/5 = .40$ or 40%
 $40\% \times 238,400 = \$95,360$
- c. Rate = $(238,400 - 46,400)/240,000 \text{ km} = \$0.80/\text{km}$
 $\$0.80/\text{km} \times 38,000 \text{ km} = \$30,400$

Analysis component:

The units-of-production method will produce the highest profit in 2017 because it is the lowest depreciation expense for 2017.

Exercise 9-8 (30 minutes)

Year	Straight-Line ¹		Double-Declining-Balance ²		Units-of-Production ³	
	Depreciation Expense	Book Value at December 31	Depreciation Expense	Book Value at December 31	Depreciation Expense	Book Value at December 31
2017	21,250	104,000	50,100	75,150	16,875	108,375
2018	21,250	82,750	30,060	45,090	22,250	86,125
2019	21,250	61,500	18,036	27,054	30,000	56,125
2020	21,250	40,250	8,054	19,000	37,125	19,000
2021	21,250	19,000	0	19,000	0	19,000

Calculations:

- $125,250 - 19,000 = 106,250/5 = 21,250$
- $2/5 = .4$ or 40%; $.4 \times 125,250 = 50,100$; $.4 \times (125,250 - 50,100) = 30,060$;
 $.4 \times (125,250 - 50,100 - 30,060) = 18,036$;
 $.4 \times (125,250 - 50,100 - 30,060 - 18,036) = 10,822$; maximum = 8,054 calculated as cost less residual = $125,250 - 19,000 = 106,250$ less total deprec. taken of 98,196 = 8,054.
- $125,250 - 19,000 = 106,250/8,500 = \$12.50/\text{hour}$;
2017– $12.50 \times 1,350 = 16,875$;
2018– $12.50 \times 1,780 = 22,250$;
2019– $12.50 \times 2,400 = 30,000$;
2020– $12.50 \times 2,980 = 37,250$; maximum = 37,125; calculated as cost less residual = $125,250 - 19,000 = 106,250$ less total deprec. taken of 69,125 = 37,125.

Analysis component:

- 2017– Units-of-production; 2020– Straight-line
- 2017– Double-declining-balance; 2020– Units-of-production

Exercise 9-9 (30 minutes)

PPE Asset	(a) Appraised Values	(b) Ratio of Individual Appraised Value to Total Appraised Value <i>(a) ÷ Total Appraised Value</i>	(c) Cost Allocation <i>(b) x Total Actual Cost</i>
Land.....	\$ 700,000	700,000 ÷ 2,100,000 = .33 or 33.33%	\$ 840,000 ¹
Building.....	1,120,000	1,120,000 ÷ 2,100,000 = .533 or 53.33%	1,344,000 ²
Equipment.....	210,000	210,000 ÷ 2,100,000 = .10 or 10%	252,000 ³
Tools.....	<u>70,000</u>	70,000 ÷ 2,100,000 = .033 or 3.33%	<u>84,000</u> ⁴
Totals.....	<u>\$ 2,100,000</u>		<u>\$ 2,520,000</u>

1. $33.33\% \times 2,520,000 = 840,000$
2. $53.33\% \times 2,520,000 = 1,344,000$
3. $10.00\% \times 2,520,000 = 252,000$
4. $3.33\% \times 2,520,000 = 84,000$

PPE Asset	Cost	2017 Depreciation	2018 Depreciation
Land	\$ 840,000	N/A ⁵	N/A ⁵
Building.....	1,344,000	$1,344,000 \times 2/10 = 268,800$	$(1,344,000 - 268,800) \times 2/10 = 215,040$
Equipment.....	252,000	$252,000 \times 2/5 = 100,800$	$(252,000 - 100,800) \times 2/5 = 60,480$
Tools	84,000	$84,000 \times 2/3 = 56,000$	$(84,000 - 56,000) \times 2/3 = 18,667$

5. Land is not depreciated as it has an unlimited life and is not consumed when used.

Analysis component:

We do not depreciate the cost of land as it has an unlimited life and is not consumed when used.

Exercise 9-10 (20 minutes)

Cost Information						Depreciation		
Description	Date of Purchase	Depreciation Method	Cost	Residual	Life	Balance of Accum. Deprec. Dec. 31, 2016	Depreciation Expense for 2017	Balance of Accum. Deprec. Dec. 31, 2017
Building	2 May 2011	S/L	\$650,000	\$250,000	10 yr.	\$226,667	\$40,000 ¹	\$266,667 ²
Modular Furniture	2 May 2011	S/L	72,000	0	6 yr.	68,000	4,000 ³	72,000 ⁴
Truck	25 Jan 2014	DDB	80,000	10,000	8 yr.	45,313	8,672 ⁵	53,985 ⁶

1. $(650,000 - 250,000)/10 = 40,000/\text{year}$
2. $226,667 + 40,000 = 266,667$
3. $(72,000 - 0)/6 = 12,000$ per year; however the maximum accumulated depreciation = 72,000; 72,000 less total depreciation taken of 68,000(8,000 in 2011 $[(72,000 - 0)/6 = \$12,000$ per year X 8/12] plus 12,000 in years 2012– 2016) = 4,000
4. $68,000 + 4,000 = 72,000$
5. Rate = $2/8 = .25$ or 25%
 $25\% \times (80,000 - 45,313) = 8,672$
6. $45,313 + 8,672 = 53,985$

Analysis component:

Depreciation is the process of allocating an asset’s cost to expense over its useful life. It should be done using a rational and systematic manner. Dynamic uses the straight-line method and the double-declining balance method for its assets, which are both acceptable under GAAP. Dynamic has likely chosen different methods for depreciating its assets to better reflect the usage pattern of each asset, which is acceptable under GAAP.

Exercise 9-11 (15 minutes)

**DYNAMICEXPLORATION
Partial Balance Sheet
December 31, 2016**

Assets

Current assets.....		\$338,000
Property, plant and equipment:		
Furniture.....	\$72,000	
Less: Accumulated depreciation	<u>68,000</u>	\$4,000
Building.....	\$650,000	
Less: Accumulated depreciation	<u>226,667</u>	423,333
Truck	\$ 80,000	
Less: Accumulated depreciation	<u>45,313</u>	<u>34,687</u>
Total property, plant and equipment.....		<u>462,020</u>
Total assets.....		<u>\$800,020</u>

Exercise 9-12 (15 minutes)

a. Straight-line depreciation:

	Year 1	Year 2	Year 3	Year 4	Year 5	5-Year Totals
Profit before depreciation	\$171,000	\$171,000	\$171,000	\$171,000	\$171,000	\$855,000
Depreciation expense ¹	73,080	73,080	73,080	73,080	73,080	365,400
Profit	<u>\$97,920</u>	<u>\$97,920</u>	<u>\$97,920</u>	<u>\$97,920</u>	<u>\$97,920</u>	<u>\$489,600</u>

b. Double-declining-balance depreciation:

	Year 1	Year 2	Year 3	Year 4	Year 5	5-Year Totals
Profit before depreciation	\$171,000	\$171,000	\$171,000	\$171,000	\$171,000	\$855,000
Depreciation expense ²	188,160	112,896	64,344	0	0	365,400
Profit (loss)	<u>\$(17,160)</u>	<u>\$58,104</u>	<u>\$106,656</u>	<u>\$171,000</u>	<u>\$171,000</u>	<u>\$489,600</u>

1. $(470,400 - 105,000)/5 = 73,080$

2. Rate = $2/5 = .40$ or 40%

Year 1: $470,400 \times 40\% = 188,160$

Year 2: $(470,400 - 188,160) \times 40\% = 112,896$

Year 3: 64,344 max. depreciation expense (calculated as $470,400 - 105,000 - 188,160 - 112,896 = 64,344$)

Analysis component:

Kenartha Oil will choose straight-line depreciation to depreciate the equipment if its goal is to show the highest value possible for the equipment on the Year 1 balance sheet. Straight-line will result in lower depreciation than double declining balance in Year 1. The lower the depreciation, the greater the net book value of the asset (cost less accumulated depreciation appearing in the balance sheet).

Exercise 9-13 (15 minutes)

	Depreciation	
Year	Straight-Line ¹	Units-of-Production ³
2017	7,200	20,088
2018	21,600	43,416
2019	21,600	33,696

- $156,000 - 26,400 = 129,600/6 = 21,600 \times 4/12 = 7,200$
- $156,000 - 26,400 = 129,600/200,000 = \$0.648/\text{unit};$
 $.648 \times 31,000 = 20,088; .648 \times 67,000 = 43,416; .648 \times 52,000 = 33,696$

Analysis component:

If depreciation is not recorded, expenses are understated and net income is overstated on the income statement and on the balance sheet, assets and equity would be overstated.

Exercise 9-14 (25 minutes)

Year	Depreciation	
	Straight-Line ¹	Double-Declining-Balance ²
2017	11,000	22,000
2018	22,000	35,200
2019	22,000	21,120

Calculations:

- $110,000/5 = 22,000 \times 6/12 = 11,000$
- $2/5 = .4$ or 40%; $.4 \times 110,000 \times 6/12 = 22,000$;
 $.4 \times (110,000 - 22,000) = 35,200$; $.4 \times (110,000 - 22,000 - 35,200) = 21,120$

Analysis component:

If the furniture had been debited to an expense account in 2017 when purchased instead of being recorded as a PPE asset, expenses would have been overstated and net income would have been understated on the income statement in 2017 while assets and equity would have been understated on the balance sheet for the same year.

Exercise 9-15 (10 minutes)

Year	(a) <u>Straight-Line</u>	(b) <u>Double-Declining-Balance</u>
2017	$(125,000 - 12,500)/5 = 22,500 \times 9/12 = 16,875$	Rate = $2/5 = .40$ or 40% $125,000 \times 40\% \times 9/12 = 37,500$
2018	$(125,000 - 12,500)/5 = 22,500$	$(125,000 - 37,500) \times 40\% = 35,000$

Exercise 9-16 (10 minutes)

- $(43,500 - 5,000)/4 = 9,625/\text{year} \times 2 \text{ years} = 19,250$ accumulated depreciation
 Book value = $43,500 - 19,250 = \underline{24,250}$
- $[(43,500 - 19,250) - 3,850]/3 = \underline{6,800}$

Exercise 9-17 (15 minutes)

2020

Dec. 31	Depreciation Expense, Machine.....	7,624	
	Accumulated Depreciation, Machine		7,624
	<i>To record depreciation.</i>		

Calculations:

$$\text{Revised depreciation} = \frac{(71,200 - 30,800^*) - 8,000}{7 - 2 \frac{9}{12} = 4.25 \text{ yrs}} = \underline{7,624/\text{year}}$$

*2017depreciation = 8,400 (71,200 – 15,200)/5 = 11,200 × 9/12

2018depreciation = 11,200

2019depreciation = 11,200

Accumulated
depreciation 30,800

Exercise 9-18 (20 minutes)

Part 1

2017			
Jan. 5	Warehouse – Door.....	25,500	
	Accounts Payable.....		25,500
	<i>To record addition of door on East wall of warehouse.</i>		

Part 2

2017			
Dec. 31	Depreciation Expense, Warehouse	14,700	
	Accumulated Depreciation, Warehouse....		14,700
	<i>To record revised depreciation on warehouse;</i>		
	<i>\$292,500 – \$90,000 = \$202,500; \$202,500 ÷ 15 yrs = \$13,500</i>		
	<i>PLUS \$25,500 - \$7,500 = \$18,000; \$18,000 ÷ 15 yrs = \$1,200;</i>		
	<i>Total depreciation on the warehouse = \$13,500 + \$1,200 = \$14,700.</i>		

Exercise 9-19 (30 minutes)

Part 1

2017			
Dec. 31	Impairment Loss	13,500	
	Equipment		12,000
	Office Building		1,500
	<i>To record impairment loss on equipment and office building.</i>		

Part 2

2018			
Dec. 31	Depreciation Expense, Equipment	1,800	
	Accumulated Depreciation, Equipment		1,800
	<i>To record revised depreciation on equipment.</i>		
31	Depreciation Expense, Furniture	491	
	Accumulated Depreciation, Furniture		491
	<i>To record depreciation on furniture.</i>		
31	Depreciation Expense, Office Building	3,838	
	Accumulated Depreciation, Office Building		3,838
	<i>To record depreciation on office building</i>		
31	Depreciation Expense, Warehouse	2,250	
	Accumulated Depreciation, Warehouse		2,250
	<i>To record depreciation on warehouse.</i>		

Calculations:

Asset	Cost	Accum. Deprec.	Book Value	Recoverable Amount	Impairment Loss	2018 Dep. Exp.
Equipment	\$40,000	\$20,000	\$20,000	\$ 8,000	\$12,000	1,800 ¹
Furniture	12,000	9,509	2,491	2,950	N/A	491 ²
Land	85,000	N/A	85,000	101,800	N/A	N/A
Office Bldng	77,000	23,000	54,000	52,500	1,500	3,838 ³
Warehouse	55,000	12,938	42,062	45,100	N/A	2,250 ⁴

- $[40,000 - 5,000] / 7,000 = \$5.00/\text{unit}$; $20,000 \text{ accum. dep.} \div \$5.00/\text{unit} = 4,000 \text{ units}$; $7,000 \text{ units in original useful life less } 4,000 \text{ units depreciated to date equals } 3,000 \text{ remaining units}$; $40,000 - 12,000 = 28,000 \text{ revised cost}$; $28,000 - 20,000 \text{ accum. dep.} = 8,000 \text{ revised book value}$; $8,000 - 5,000 \text{ residual value} = 3,000$; $3,000 \div 3,000 \text{ remaining units} = \$1.00/\text{unit revised depreciation rate}$; $1.00/\text{unit} \times 1,800 \text{ units} = 1,800$
- $12,000 - 9,509 = 2,491$; $2,491 \times 2/8 = 623$ which exceeds maximum allowable; maximum allowable = 2,491 remaining book value - 2,000 residual = 491
- $77,000 - 1,500 = 75,500 \text{ revised cost of office building}$; $75,500 - 23,000 = 52,500 \text{ remaining book value}$; $(52,500 - 17,000) \div 9.25 \text{ yrs remaining useful life} = 3,838$
- $55,000 - 10,000 = 45,000$; $45,000 \div 20 \text{ yrs} = 2,250$

Exercise 9-20 (20 minutes)

a.

2017

Mar. 1	Accumulated Depreciation, Truck	21,850	
	Cash	20,150	
	Truck		42,000
	<i>To record the sale of the truck for \$20,150.</i>		

b.

Mar. 1	Accumulated Depreciation, Truck	21,850	
	Cash	21,600	
	Truck		42,000
	Gain on Disposal		1,450
	<i>To record the sale of the truck for \$21,600.</i>		

c.

Mar. 1	Accumulated Depreciation, Truck	21,850	
	Cash	19,200	
	Loss on Disposal	950	
	Truck		42,000
	<i>To record the sale of the truck for \$19,200.</i>		

d.

Mar. 1	Accumulated Depreciation, Truck	21,850	
	Loss on Disposal	20,150	
	Truck		42,000
	<i>To record the sale of the truck for \$0; it was scrapped.</i>		

Exercise 9-21 (15 minutes)

To record partial year's depreciation in 2021:

2021			
July 1	Depreciation Expense.....	21,200	
	Accumulated Depreciation, Machine		21,200
	<i>To record partial year depreciation in year of disposal; $(296,800/7) \times 6/12 = 21,200$.</i>		

(a)			
July 1	Accumulated Depreciation, Machine.....	190,800*	
	Cash.....	112,000	
	Machine		296,800
	Gain on Disposal.....		6,000
	<i>To record sale of machine for 112,000.</i>		

(b)			
1	Accumulated Depreciation, Machine.....	190,800*	
	Cash.....	96,000	
	Loss on Disposal	10,000	
	Machine		296,800
	<i>To record receipt of \$96,000 from insurance settlement.</i>		

* $(296,800/7) \times 4.5 \text{ years} = \underline{190,800}$

Exercise 9-22 (10 minutes)

- a. $190,000 - 105,000 = \underline{85,000 \text{ book value}}$
- b. Book value of the assets given up = $(85,000 + 164,000) = 249,000$
 Less: Fair value of assets given up $(56,000 + 164,000) = \underline{220,000}$
 Loss on exchange..... 29,000
- c. 220,000
- d.

2017			
Oct. 6	Tractor (new)*	220,000	
	Accumulated Depreciation, Tractor (old).....	105,000	
	Loss on Exchange	29,000	
	Cash.....		164,000
	Tractor (old).....		190,000
	<i>To record exchange of old tractor for a new one.</i>		

* $\$56,000 + \$164,000 = \$220,000$.

Exercise 9-23 (20 minutes)

a.

2017

Nov. 3	Accumulated Depreciation, Computer (old).....	65,000	
	Computer (new) ¹	175,000	
	Computer (old)		150,000
	Cash		90,000

To record exchange of computers.

1. **Computer (new) = Cash paid + Book Value of asset given up**
= \$90,000 + \$85,000 = \$175,000

b.

2017

Nov. 3	Accumulated Depreciation, Computer (old).....	65,000	
	Computer (new) ¹	174,000	
	Loss on Disposal ²	1,000	
	Computer (old)		150,000
	Cash		90,000

To record exchange of computers.

1. **Computer (new) = Fair Value of Assets Received**
= \$174,000

2. **Loss on Disposal = Proceeds – Book Value of assets given up**
= \$174,000 – [(\$150,000 – \$65,000) + \$90,000] = \$1,000

Analysis component:

The dollar value that will be used to depreciate the new computer is \$174,000 because the Cost Principle requires that all transactions are to be recorded at their original cost. \$174,000 was determined to be the cost.

Exercise 9-24 (25 minutes)

(a)

Jan. 2	Accumulated Depreciation, Machine	45,250	
	Cash	32,500	
	Loss on Disposal.....	6,250	
	Machine		84,000
	<i>To record sale of machine;</i>		
	<i>32,500 – (84,000 – 45,250) = 6,250 loss.</i>		

(b)

Jan. 2	Accumulated Depreciation, Machine	45,250	
	Tools	115,750	
	Cash.....		77,000
	Machine		84,000
	<i>To record exchange of machine;</i>		
	<i>Value of assets given up = \$77,000 cash + \$38,750</i>		
	<i>book value of the old machine = \$115,750.</i>		

(c)

Jan. 2	Accumulated Depreciation, Machine	45,250	
	Van	104,000	
	Loss on Disposal.....	2,750	
	Cash.....		68,000
	Machine		84,000
	<i>To record exchange of machine;</i>		
	<i>104,000 – (68,000 + 38,750) = 2,750 loss.</i>		

(d)

Jan. 2	Accumulated Depreciation, Machine	45,250	
	Land	75,000	
	Machine		84,000
	Cash.....		25,000
	Gain on Disposal.....		11,250
	<i>To record exchange;</i>		
	<i>75,000 – (25,000 + 38,750) = 11,250 gain.</i>		

Exercise 9-25 (10 minutes)

2017			
Jan.	1	Copyrights	177,480
		Cash	177,480
		<i>To record purchase of copyright.</i>	
Dec.	31	Amortization Expense, Copyrights	14,790
		Accumulated Amortization, Copyrights	14,790
		<i>To record amortization of copyright;</i> <i>177,480/12 = 14,790</i>	

Exercise 9-26 (15 minutes)

Part 1

2017			
Sept.	5	Timber Rights.....	432,000
		Cash	96,000
		Long-Term Notes Payable.....	336,000
		<i>To record purchase of timber rights.</i>	
	27	Patent	148,000
		Accounts Payable.....	148,000
		<i>To record purchase of patent.</i>	

Part 2

2017			
Dec.	31	Amortization Expense, Timber Rights	48,000
		Accumulated Amort., Timber Rights	48,000
		<i>To record amortization of timber rights;</i> <i>\$432,000 ÷ 3 yrs = \$144,000/year × 4/12 = \$48,000.</i>	
	31	Amortization Expense, Patent	3,700
		Accumulated Amortization, Patent	3,700
		<i>To record amortization of patent;</i> <i>\$148,000 ÷ 10 yrs = \$14,800/year × 3/12 = \$3,700.</i>	
2018			
Dec.	31	Amortization Expense, Timber Rights	144,000
		Accumulated Amortization, Timber Rights	144,000
		<i>To record amortization of timber rights;</i> <i>\$432,000 ÷ 3 yrs = \$144,000/year.</i>	
	31	Amortization Expense, Patent	14,800
		Accumulated Amortization, Patent	14,800
		<i>To record amortization of patent;</i> <i>\$148,000 ÷ 10 yrs = \$14,800/year.</i>	

Exercise 9-27 (25 minutes)

**Huang Resources
Balance Sheet
October 31, 2017**

Assets

Current assets:

Cash.....		\$ 9,600	
Accounts receivable	\$ 27,200		
Less: Allowance for doubtful accounts.....	<u>1,920</u>	<u>25,280</u>	
Total current assets.....			\$ 34,880

Property, plant and equipment:

Land		\$ 89,600	
Building.....	\$ 147,200		
Less: Accumulated depreciation	<u>81,600</u>	65,600	
Equipment	\$184,000		
Less: Accumulated depreciation	<u>110,400</u>	<u>73,600</u>	
Total property, plant and equipment			228,800

Intangible assets:

Mineral rights.....	\$ 57,600		
Less: Accumulated amortization	<u>30,400</u>	\$ 27,200	
Trademark.....	\$ 33,600		
Less: Accumulated amortization	<u>22,400</u>	<u>11,200</u>	
Total intangible assets.....			<u>38,400</u>

Total assets.....			<u>\$302,080</u>
--------------------------	--	--	-------------------------

Liabilities

Current liabilities:

Accounts payable.....	\$18,400		
Current portion of long-term note.....	<u>34,000</u>		
Total current liabilities		\$ 52,400	

Non-current liabilities:

Note payable, less current portion.....		<u>38,000</u>	
---	--	---------------	--

Total liabilities			\$ 90,400
--------------------------------	--	--	------------------

Equity

Ave Huang, capital			<u>211,680¹</u>
Total liabilities and equity			<u>\$302,080</u>

Calculations:

1. 221,280 adjusted capital balance + 1,433,600 revenues – 1,443,200 expenses = 211,680 post-closing capital balance

Exercise 9-28 (35 minutes)

**Montalvo Bionics
Balance Sheet
April 30, 2017**

Assets

Current assets:

Cash.....		\$	9,000	
Accounts receivable	\$16,200			
Less: Allowance for doubtful accounts.....	<u>900</u>		15,300	
Prepaid rent.....			<u>1,080¹</u>	
Total current assets				\$ 25,380

Property, plant and equipment:

Furniture	\$21,600			
Less: Accumulated depreciation	<u>14,400²</u>	\$	7,200	
Machinery	\$48,600			
Less: Accumulated depreciation	<u>21,600³</u>	<u>27,000</u>		
Total property, plant and equipment				34,200

Intangible assets:

Patent.....		\$21,600		
Less: Accumulated amortization		<u>720⁴</u>	<u>20,880</u>	

Total assets.....				<u>\$80,460</u>
--------------------------	--	--	--	------------------------

Liabilities

Current liabilities:

Accounts payable.....	\$4,860			
Unearned revenues.....	5,760			
Current portion of long-term note.....	<u>5,400</u>		\$ 16,020	
Total current liabilities				

Non-current liabilities:

Note payable, less current portion.....		<u>8,100</u>		
---	--	--------------	--	--

Total liabilities				\$24,120
--------------------------------	--	--	--	-----------------

Equity

Josh Montalvo, capital			<u>56,340⁵</u>	
------------------------------	--	--	---------------------------	--

Total liabilities and equity				<u>\$80,460</u>
---	--	--	--	------------------------

Calculations:

1. $12,960 \times 11/12 = 11,880$ rent used; $12,960 - 11,880 = 1,080$ remaining in Prepaid Rent
2. $21,600 \div 5 = 4,320$; $4,320 + 10,080 = 14,400$ accum. dep.
3. $48,600 - 20,088 = 28,512$; $28,512 \times 2/10 = 5,702$; maximum depreciation is $48,600 - 27,000 = 21,600$ therefore 2017 depreciation expense is 1,512 and accum. dep. is $20,088 + 1,512 = 21,600$.
4. $21,600 \div 15 = 1,440$ /year; $1,440 \times 6/12 = 720$.
5. $22,572$ unadjusted capital + $223,200$ revenues – $82,800$ withdrawals – $88,200$ expenses – $4,320$ dep. furniture – $1,512$ dep. machinery – 720 amort. patent – $11,880$ rent expense = $56,340$ post-closing capital

Exercise 9-29

2015

April 1	Food Truck	52,000	
	Oven	6,000	
	Prepaid Insurance	3,600	
	Cash		61,600

To record the purchase of food truck, oven and insurance.

Oct 1	Repairs Expense	1,800	
	Cash		1,800

To record repairs for truck

Dec 31	Insurance Expense	2,700	
	Prepaid Insurance		2,700

To record 9 months of insurance expense

Dec 31	Depreciation Expense, Truck	6,300	
	Accumulated Depreciation, Truck		6,300

To record depreciation of truck;

Calculation:

$$[(48,000 + 4,000) - 10,000] / 5 \text{ years} = 8,400 \times 9/12 = \$6,300.$$

31	Depreciation Expense, Oven	750	
	Accumulated Depreciation, Oven		750

To record depreciation of oven;

$$(\$6,000 - 1000) \div 5 \text{ yrs} = \$1,000/\text{year} \times 9/12 = \$750.$$

2016

April 1	Repair Expense	2,100	
	Prepaid Insurance	3,600	
	Cash		5,700

To record purchase of tires and insurance for year

Dec 31	Insurance Expense	3,600	
	Prepaid Insurance		3,600
	<i>To record 1 year of insurance expense.</i>		
Dec 31	Depreciation Expense, Truck	8,400	
	Accumulated Depreciation, Truck		8,400
	<i>To record depreciation of truck;</i>		
	<i>Calculation:</i>		
	<i>[(48,000 + 4,000) – 10,000] / 5 years = 8,400</i>		
31	Depreciation Expense, Oven	1,000	
	Accumulated Depreciation, Oven		1,000
	<i>To record depreciation of oven;</i>		
	<i>(\$6,000-1000) ÷ 5 yrs = \$1,000/year</i>		
2017			
Mar 31	Depreciation Expense	2,100	
	Accumulated Depreciation, Truck		2,100
	<i>To record partial year depreciation in year of disposal; 8,400 × 3/12 = 2,100.</i>		
Mar 31	Depreciation Expense	250	
	Accumulated Depreciation, Oven		250
	<i>To record partial year depreciation in year of disposal; 1000 × 3/12 = 250.</i>		
Mar 31	Accumulated Depreciation, Truck.....	16,800	
	Accumulated Depreciation, Oven.....	2,000	
	Cash	21,000	
	Truck.....		52,000
	Oven.....		6,000
	Loss on Disposal.....	18,200	
	<i>To record loss on sale of truck;</i>		
	<i>16,800+2,000+21,000-52,000-6,000=18,200</i>		

***Exercise 9-30 (30 minutes)**

Part 1

2017

Jul. 3 Truck – Tool Carrier..... 9,600
 Cash..... 9,600
 To record installation of new component to truck.

Part 2

Truck:							
Component	Date of Purchase	Cost	Est. Resid.	Est. Life	Accum. Dep. at Dec 31/16	Dep. Exp. Dec 31/17	Dep. Exp. Dec 31/18
Truck body	Jul 7/15	\$ 28,000	-0-	10 yr	\$ 4,200	\$ 2,800 ¹	\$ 2,800 ¹
Motor	Jul 7/15	8,000	-0-	10 yr	1,200	800 ²	800 ²
Tool Carrier	Jul 3/17	9,600	-0-	8 yr	-0-	600 ³	1,200 ³
		<u>\$ 45,600</u>			<u>\$ 5,400</u>	<u>\$4,200</u>	<u>\$4,800</u>

Calculations:

1. $28,000 \div 10 \text{ yrs} = 2,800/\text{yr}$
2. $8,000 \div 10 \text{ yrs} = 800/\text{yr}$
3. $9,600 \div 8 \text{ yrs} = 1,200/\text{yr} \times 6/12 = 600$ for partial period in 2017

Part 3

Book value of truck at December 31, 2017:
 $\$45,600 \text{ total cost} - (\$5,400 + \$4,200 = \$9,600) = \$36,000$

Book value of truck at December 31, 2018:
 $\$36,000 - \$4,800 = \$31,200$

PROBLEMS

Problem 9-1A (25 minutes)

Part 1

	<u>Land</u>	<u>Building Two</u>	<u>Building Three</u>	<u>Land Impmnts. One</u>	<u>Land Impmnts. Two</u>
Purchase price*	\$2,867,200	\$985,600		\$627,200	
Demolition	676,160				
Landscaping.....	267,520				
New building.....			\$3,230,400		
New improvements					\$252,800
Totals	<u>\$3,810,880</u>	<u>\$985,600</u>	<u>\$3,230,400</u>	<u>\$627,200</u>	<u>\$252,800</u>

*Allocation of purchase price:

	<u>Appraised Value</u>	<u>Percent of Total</u>	<u>Apportioned Cost</u>
Land	\$2,984,960	64%	\$2,867,200
Building Two	1,026,080	22	985,600
Land Improvements One	<u>652,960</u>	<u>14</u>	<u>627,200</u>
Totals	<u>\$4,664,000</u>	<u>100%</u>	<u>\$4,480,000</u>

Part 2

Mar. 31	Land.....	3,810,880	
	Building Two	985,600	
	Building Three	3,230,400	
	Land Improvements One.....	627,200	
	Land Improvements Two	252,800	
	Cash		8,906,880
	<i>To record costs of plant assets.</i>		

Problem 9-2A (25 minutes)

**Derlak Enterprises
Balance Sheet
December 31**

	2017	2016
Assets		
Current assets:		
Cash	\$ 12,000	\$ 28,800
Prepaid rent	40,000	48,000
Office supplies	<u>2,400</u>	<u>2,320</u>
Total current assets	\$ 54,400	\$ 79,120
Property, plant and equipment:		
Equipment	\$184,000	\$100,000
Less: Accumulated depreciation	<u>72,800</u> 111,200	<u>64,800</u> 35,200
Tools	\$143,920	\$100,800
Less: Accumulated depreciation	<u>44,800</u> 99,120	<u>42,400</u> 58,400
Vehicles	\$252,800	\$252,800
Less: Accumulated depreciation	<u>108,800</u> 144,000	<u>97,600</u> 155,200
Total property, plant and equipment	354,320	248,800
Intangible assets:		
Franchise	\$ 41,600	\$ 41,600
Less: Accumulated amortization	<u>19,200</u> 22,400	<u>11,200</u> 30,400
Patent	\$ 16,000	\$ 16,000
Less: Accumulated amortization	<u>4,000</u> 12,000	<u>2,400</u> 13,600
Total intangible assets	34,400	44,000
Total assets	<u>\$443,120</u>	<u>\$371,920</u>
Liabilities		
Current liabilities:		
Accounts payable	\$ 56,800	\$ 9,600
Salaries payable	<u>32,800</u>	<u>26,400</u>
Total current liabilities	\$ 89,600	\$ 36,000
Non-current liabilities:		
Notes payable, due in 2023	<u>240,000</u>	<u>129,600</u>
Total liabilities	\$329,600	\$165,600
Equity		
Lee Derlak, capital	<u>113,520</u> *	<u>206,320</u>
Total liabilities and equity	<u>\$443,120</u>	<u>\$371,920</u>

*206,320 – 32,000 – 780,800 + 720,000 = 113,520

Analysis component:

Derlak's assets are financed mainly by equity in 2016. In 2017, the assets are financed largely by debt. The change from 2016 to 2017 in how assets were mainly financed (from equity to debt) is unfavourable because the greater the debt the greater the risk associated with debt (is/will Derlak be in a position to pay the interest and principal as it comes due).

Problem 9-3A (25 minutes)

1. Purchased January 1, 2017	2017	2018	2019
A. Double-declining-balance method			
Equipment.....	\$375,000	\$375,000	\$375,000
Less: Accumulated depreciation.....	93,750	164,063	216,797
Year-end book value	\$281,250	\$210,937	\$158,203
Depreciation expense for the year ¹	\$93,750	\$70,313	\$52,734

B. Straight-line method

Equipment.....	\$375,000	\$375,000	\$375,000
Less: Accumulated depreciation.....	39,063	78,126	117,189
Year-end book value	\$335,937	\$296,874	\$257,811
Depreciation expense for the year	\$39,063 ²	\$39,063	\$39,063

- Rate = $2/8 = 0.25$ or 25%
 2017: $0.25 \times 375,000 = 93,750$
 2018: $0.25 \times (375,000 - 93,750) = 70,313$
 2019: $0.25 \times (375,000 - 93,750 - 70,313) = 52,734$
- $(375,000 - 62,500)/8 = 39,063 = 39,063$

2. Purchased July 1, 2017	2017	2018	2019
A. Double-declining-balance method			
Equipment.....	\$375,000	\$375,000	\$375,000
Less: Accumulated depreciation.....	46,875	128,906	190,430
Year-end book value	\$328,125	\$246,094	\$184,570
Depreciation expense for the year ³	\$46,875	\$82,031	\$61,524

B. Straight-line method

Equipment.....	\$375,000	\$375,000	\$375,000
Less: Accumulated depreciation.....	19,532	58,594	97,657
Year-end book value	\$355,468	\$316,405	\$277,342
Depreciation expense for the year	\$19,532 ⁴	\$39,063	\$39,063

- Rate = $2/8 = 0.25$ or 25%
 2017: $0.25 \times 375,000 \times 6/12 = 46,875$
 2018: $0.25 \times (375,000 - 46,875) = 82,031$
 2019: $0.25 \times (375,000 - 46,875 - 82,031) = 61,524$
- $(375,000 - 62,500)/8 = 39,063 \times 6/12 = 19,532$

Problem 9-4A (25 minutes)

Year	Depreciation Method ¹ :		
	Straight-line	Double-declining balance	Units-of-production ²
2017	$(828,000 - 192,000)/10 = 63,600/\text{year} \times 10/12 = 53,000$	Rate = $2/10 = .20$ or 20% $828,000 \times 20\% \times 10/12 = 138,000$	Rate = $(828,000 - 192,000)/13,250 = 48/\text{hour}$ $48 \times 720 = 34,560$
2018	63,600	$(828,000 - 138,000) \times 20\% = 138,000$	$48 \times 1,780 = 85,440$
2019	63,600	$(828,000 - 138,000 - 138,000) \times 20\% = 110,400$	$48 \times 1,535 = 73,680$

1. Depreciation is calculated to the nearest month.
2. Assume actual hours of service were: 2017: 720; 2018: 1,780; 2019: 1,535.

Analysis component:

If you could ignore the matching principle, you might record the purchase of the boats as a revenue expenditure which means the entire cost of \$828,000 would have been expensed in 2017, the year of purchase. This would have resulted in the net income being understated in 2017 and, because of depreciation expense not being recorded, net income would be overstated in the remaining years of the asset's useful life as well. On the balance sheet, recording the purchase of the boats as a revenue expenditure would have caused assets and equity to be understated in each year of the asset's life. It is interesting to note that the error would self-correct by the end of the asset's life if it would have gone undetected.

Problem 9-5A (25 minutes)

Year	Depreciation Method ¹ :		
	Straight-line	Double-declining balance	Units-of-production ²
2017	$(828,000 - 192,000)/10 = 63,600/\text{year} \times 6/12 = 31,800$	Rate = $2/10 = .20$ or 20% $828,000 \times 20\% \times 6/12 = 82,800$	Same as Problem 9-4A; Units-of-production is usage based and not affected by time 34,560
2018	63,600	$(828,000 - 82,800) \times 20\% = 149,040$	85,440
2019	63,600	$(828,000 - 82,800 - 149,040) \times 20\% = 119,232$	73,680

1. Depreciation is calculated using the half-year convention.
2. Assume actual hours of service were: 2017: 720; 2018: 1,780; 2019: 1,535.

Problem 9-6A (15 minutes)

1.

2017

Apr. 30	Depreciation Expense, Building	65,000	
	 Accumulated Depreciation, Building.....		65,000
	<i>To record annual depreciation;</i>		
	<i>975,000/15 = 65,000.</i>		
30	Depreciation Expense, Equipment	86,400	
	 Accumulated Depreciation, Equipment.....		86,400
	<i>To record annual depreciation;</i>		
	<i>Rate = 2/10 = .20 or 20%;</i>		
	<i>432,000 × 20% = 86,400.</i>		

2.

**BigSkyFarms
Partial Balance Sheet
April 30, 2018**

Property, plant and equipment:			
	Land		\$650,000
	Building	\$975,000	
	 Less: Accumulated depreciation.....	<u>780,000</u>	195,000
	Equipment	750,000	
	 Less: Accumulated depreciation.....	<u>404,400</u>	<u>345,600</u>
	Total property, plant and equipment		<u><u>\$1,190,600</u></u>

Problem 9-7A (50 minutes)

Part 1

	<i>Market Value</i>	<i>Percentage of Total</i>	<i>Apportioned Cost</i>
Building	\$652,800	48%	\$604,800
Land	462,400	34	428,400
Land improvements	68,000	5	63,000
Vehicles	<u>176,800</u>	<u>13</u>	<u>163,800</u>
Total	<u>\$1,360,000</u>	<u>100%</u>	<u>\$1,260,000</u>

2017

Mar. 1	Building	604,800	
	Land	428,400	
	Land Improvements.....	63,000	
	Vehicles	163,800	
	Cash		1,260,000
	<i>To record asset purchases.</i>		

Part 2 2017 straight-line depreciation on building:

$$(\$604,800 - \$41,040) / 15 \times 10 / 12 = \underline{\underline{\$31,320}}$$

Part 3 2017 double-declining-balance depreciation on land improvements:

$$\text{Rate} = 2/5 = .40 \text{ or } 40\%$$

$$\$63,000 \times 40\% \times 10 / 12 = \underline{\underline{\$21,000}}$$

Analysis component:

If the assets purchased on March 1, 2017 were put into service on May 23, 2017 the depreciation expense calculated in parts 2 and 3 above would be based on 7 months instead of 10 months because straight-line and double-declining-balance depreciation are both based on the time the assets are actually USED during the period.

Problem 9-8A (30 minutes)

<u>Year</u>	<u>Straight-Line^a</u>	<u>Units-of-Production^b</u>	<u>Double-Declining-Balance^c</u>
2017	\$ 38,000	\$ 20,544	\$ 84,000
2018	114,000	117,504	210,000
2019	114,000	114,816	105,000
2020	114,000	113,472	52,500
2021	<u>76,000</u>	<u>89,664</u>	<u>4,500</u>
Totals	<u>\$456,000</u>	<u>\$456,000</u>	<u>\$456,000</u>

^aStraight-line:

$$\text{Cost per year} = (504,000 - 48,000)/4 \text{ years} = \$114,000 \text{ per year} \times 4/12 = 38,000$$

^bUnits-of-production:

$$\text{Cost per unit} = (504,000 - 48,000)/475,000 \text{ units} = \$0.96 \text{ per unit}$$

<i>Year</i>	<i>Units</i>	<i>Unit Cost</i>	<i>Depreciation</i>
2017	21,400	\$0.96	\$ 20,544
2018	122,400	0.96	117,504
2019	119,600	0.96	114,816
2020	118,200	0.96	113,472
2021	102,000	0.96	<u>89,664*</u>
Total			<u>\$456,000</u>

**Take only enough depreciation in Year 2021 to reach the maximum accumulated depreciation of \$456,000 (which is cost less residual).*

^cDouble-declining-balance:

$$\text{Rate} = 2/4 = .50 \text{ or } 50\%$$

$$2017: 50\% \times 504,000 \times 4/12 = 84,000$$

$$2018: 50\% \times (504,000 - 84,000) = 210,000$$

$$2019: 50\% \times (504,000 - 84,000 - 210,000) = 105,000$$

$$2020: 50\% \times (504,000 - 84,000 - 210,000 - 105,000) = 52,500$$

$$2021: 456,000 - 451,500^* = 4,500$$

**Take only enough depreciation in Year 2021 to reach the maximum accumulated depreciation of \$456,000 (which is cost less residual).*

Problem 9-9A (30 minutes)

Cost Information						Depreciation		
Description	Date of Purchase	Depreciation Method	Cost	Residual	Life	Balance of Accum. Deprec. Dec. 31, 2017	Deprec. Expense for 2018	Balance of Accum. Deprec. Dec. 31, 2018
Office equipment	March 27/14	Straight-line	\$52,000	\$14,000	10 yr.	14,250 ¹	3,800 ²	18,050 ³
Machinery	June 4/14	Double-declining balance	\$275,000	\$46,000	6 yr.	209,362 ⁴	19,638 ⁵	229,000 ⁶
Truck	Nov. 13/17	Units-of-production	\$113,000	\$26,000	250,000 km.	4,872 ⁷	23,664 ⁸	28,536 ⁹

1. $(52,000 - 14,000)/10 = 3,800/\text{year} \times 3 \frac{9}{12} = 14,250$
2. $(52,000 - 14,000)/10 = 3,800/\text{year}$
3. $14,250 + 3,800 = 18,050$
4. Rate = $2/6 = .3333$ or 33.33%

2014:	$33.33\% \times 275,000 \times 7/12 =$	53,472
2015:	$33.33\% \times (275,000 - 53,472) =$	73,843
2016:	$33.33\% \times (275,000 - 53,472 - 73,843) =$	49,228
2017:	$33.33\% \times (275,000 - 53,472 - 73,843 - 49,228) =$	<u>32,819</u>
	Accumulated depreciation at Dec. 31, 2017=	<u>\$209,362</u>
5. 2018: $(275,000 - 46,000) 209,362 = \$19,638$
6. $\$209,362 + \$19,638 = 229,000$
7. Rate = $(113,000 - 26,000)/250,000 = \$0.348/\text{km}$; $14,000 \times 0.348 = 4,872$
8. $68,000 \times 0.348 = 23,664$
9. $4,872 + 23,664 = 28,536$

Problem 9-10A (20 minutes)

2017

Mar. 26	Delivery Truck	102,900	
	Cash		102,900
	<i>To record purchase of new truck; \$97,075 plus \$5,825 freight costs.</i>		
Dec. 31	Depreciation Expense, Delivery Truck¹	13,185	
	Accumulated Depreciation, Delivery Truck		13,185
	<i>To record depreciation from Mar. 26 to Dec. 31, 2017.</i>		

2018

Dec. 31	Depreciation Expense, Delivery Truck²	22,220	
	Accumulated Depreciation, Delivery Truck		22,220
	<i>To record depreciation.</i>		

1. $(102,900 - 15,000) / 5 \times 9/12 = 13,185$

2. $\frac{102,900 - 13,185 - 17,500}{4 - 9/12 = 3.25} = 22,220$

Problem 9-11A (30 minutes)

2018

Dec. 31	Depreciation Expense, Machinery¹	95,200	
	Accumulated Depreciation, Machinery		95,200
	<i>To record annual depreciation.</i>		
31	Depreciation Expense, Office Furniture²	11,733	
	Accumulated Depreciation, Office Furniture		11,733
	<i>To record annual depreciation.</i>		

Calculations:

	Cost	Accumulated Depreciation	Residual		
1.	<u>556,800 -</u>	<u>246,400 -</u>	<u>120,000</u>	=	95,200
		2			

	Cost	Accumulated Depreciation	Residual		
2.	<u>89,600 -</u>	<u>49,600 -</u>	<u>(11,200 - 6,400)</u>	=	11,733
		5 - 2 = 3			

Problem 9-12A (20 minutes)

Part 1

2017

Jan. 7	Machine #5027 – Blade (new)	10,400	
	Accumulated Depreciation, Machine #5027 – Blade	2,688 ¹	
	Loss on Disposal.....	5,032	
	Machine #5027 – Blade (old)		7,720
	Cash.....		10,400
	<i>To record installation of replacement blade.</i>		

Calculations:

1. $7,720 - 1,000 = 6,720$; $6,720 \div 5 \text{ yrs} = 1,344$ deprec. for 2015;
 $1,344 + 1,344$ deprec. for 2016 = 2,688 accum. deprec. at Dec. 31, 2016.

Part 2

Metal Housing $44,000 - 8,000 = 36,000$; $36,000 \div 15 \text{ yrs} = 2,400$ for 2015 *PLUS* 2,400 for 2016 = 4,800 accum. deprec. at Dec. 31/2016;
 Revised deprec. = $44,000 - 4,800 = 39,200$ book value;
 $39,200 - 8,600$ residual = 30,600 depreciable cost; \$1,700
 $30,600 \div 18 \text{ years}^* =$

**20 years – 2 yrs already depreciated = 18 yr remaining life*

Motor 2015: $26,000 \times 2/10 = 5,200$
 2016: $26,000 - 5,200 = 20,800 \times 2/10 = 4,160$
 2017: $20,800 - 4,160 = 16,640 \times 2/10 =$ 3,328

Blade $10,400 - 1,000 = 9,400$; $9,400 \div 5 \text{ yrs} =$ 1,880

Total depreciation expense to be recorded on Machine #5027 for 2017= \$6,908

Problem 9-13A (40 minutes)

Part 1

2017

Oct. 31	Impairment Loss	24,200	
	Equipment		24,200
	<i>To record impairment loss on equipment.</i>		
31	Impairment Loss	14,300	
	Furniture		14,300
	<i>To record impairment loss on furniture.</i>		

***Calculations:**

	Book Value	Recoverable Value	Impairment Loss
Land	\$105,600	\$136,400	NA
Building	57,200	105,600	NA
Equipment	52,800	28,600	\$24,200
Furniture	29,700	15,400	14,300

Problem 9-13A (concluded)
Part 2

Safety-First Company
Balance Sheet
October 31, 2017

Assets

Current assets:

Cash.....		\$ 11,000	
Accounts receivable	\$ 19,800		
Less: Allowance for doubtful accounts.....	<u>880</u>	18,920	
Merchandise inventory		<u>35,200</u>	
Total current assets			\$ 65,120

Property, plant and equipment:

Land		\$105,600	
Building.....	\$136,400		
Less: Accumulated depreciation	<u>79,200</u>	57,200	
Equipment	\$66,000 ¹		
Less: Accumulated depreciation	<u>37,400</u>	28,600	
Furniture	\$36,300 ²		
Less: Accumulated depreciation	<u>20,900</u>	<u>15,400</u>	
Total property, plant and equipment			<u>206,800</u>

Total assets.....			<u>\$271,920</u>
--------------------------	--	--	-------------------------

Liabilities

Current liabilities:

Accounts payable.....	\$ 11,220		
Unearned revenues	7,920		
Current portion of long-term note.....	<u>26,400</u>		
Total current liabilities		\$ 45,540	

Non-current liabilities:

Note payable, less current portion.....		<u>59,400</u>	
---	--	---------------	--

Total liabilities			\$104,940
--------------------------------	--	--	------------------

Equity

Tarifa Sharma, capital		<u>166,980³</u>	
------------------------------	--	----------------------------	--

Total liabilities and equity			<u>\$271,920</u>
---	--	--	-------------------------

Calculations:

1. 90,200 cost – 24,200 impairment loss = 66,000
2. 50,600 cost – 14,300 impairment loss = 36,300
3. 62,480 adjusted capital balance + 904,200 sales – 761,200 expenses – 24,200 impairment loss, equip. – 14,300 impairment loss, furn. = 166,980 post-closing capital balance

Analysis component:

An impairment loss causes net income to decrease on the income statement. On the balance sheet, an impairment loss causes total assets to decrease because of the decrease in property, plant and equipment. Equity also decreases on the balance sheet as a result of the decreased net income.

Problem 9-14A (30 minutes)

1.

2018

Sept. 27	Depreciation Expense, Building	4,950	
	Accumulated Depreciation, Building ¹		4,950
	<i>To record building depreciation for 2018.</i>		
27	Cash	592,000	
	Accumulated Depreciation, Building ²	398,550	
	Gain on Disposal		67,350
	Land		396,800
	Building		526,400
	<i>To record sale of land and building.</i>		

2.

Nov. 2	Depreciation Expense, Equipment	16,133	
	Accumulated Depreciation, Equipment ³		16,133
	<i>To record equipment depreciation for 2018.</i>		
2	Cash	56,800	
	Accumulated Depreciation, Equipment ⁴	90,533	
	Loss on Disposal	23,867	
	Equipment		171,200
	<i>To record sale of equipment.</i>		

1. Depreciation from Jan. 1, 2018 to Sept. 27, 2018
 $[(526,400 - 393,600) - 80,000] / 8 = 6,600/\text{year} \times 9/12 = 4,950$
2. Accumulated Depreciation, Building =
 $4,950 + 393,600 = 398,550$
3. Depreciation from Jan. 1, 2018 to Nov. 2, 2018
 Rate = $2/10 = .20$ or 20%
 $171,200 - 74,400 = 96,800 \times 20\% = 19,360 \times 10/12 = 16,133$
4. Accumulated Depreciation, Equipment =
 $16,133 + 74,400 = 90,533$

	Accumulated Depreciation, Machine 1795		22,646
	<i>To record depreciation.</i>		

2021

Dec. 31	Depreciation Expense, Machine BT-311 ⁵	77,810	
	Accumulated Depreciation, Machine BT-311		77,810
	<i>To record depreciation.</i>		

b. Purchase/exchange/disposal of each machine.

2017

Apr. 1	Machine 1550	52,900	
	Cash		52,900
	<i>To record purchase of Machine 15-50.</i>		

2020

Mar. 29	Machine 1795 (= assets given up).....	60,390	
	Accumulated Depreciation, Machine 1550 ²	24,300	
	Machine 1550		52,900
	Cash		31,790
	<i>To record exchange of Machine 1550.</i>		

2021

Oct. 2	Machine BT-311	537,000	
	Accumulated Depreciation, Machine 1795 ⁴	36,800	
	Loss on Disposal	3,590	
	Machine 1795		60,390
	Cash		517,000
	<i>To record exchange of Machine 1795.</i>		

2024

Aug. 21	Cash.....	81,200	
	Accumulated Depreciation, Machine BT-311 ⁶	348,890	
	Loss on Disposal	106,910	
	Machine BT-311		537,000
	<i>To record sale of Machine BT-311.</i>		

Problem 9-17A (continued)

Calculations:

1. $\frac{52,900 - 4,300}{6} = 8,100/\text{year} \times 9/12 = \underline{6,075}$

2. Depreciation 2017:	6,075			
	2018:	8,100		
	2019:	8,100		
	2020:	<u>2,025</u>	(8,100 × 3/12)	
Accum. Deprec.		<u>24,300</u>		

Book Value	52,900 – 24,300 =	28,600		
Cash Paid	62,000 – 30,210 =	31,790		
Book Value 28,600 plus cash paid 31,790 =	60,390			

3. Rate = $2/4 = .50$ or 50%
 $50\% \times 60,390 \times 9/12 = \underline{22,646}$ (deprec. for 2017)

4. $50\% \times (60,390 - 22,646) \times 9/12 =$		14,154	(deprec. for 2021)	
		<u>+ 22,646</u>	(deprec. for 2020)	
		<u>36,800</u>	(accum. deprec.)	

5. $(537,000 - 35,000)/200,000 = 2.51/\text{unit}$
 2021: 31,000 units × 2.51/unit = 77,810

6. Depreciation for Jan. 1/2022 to August 21/2024				
= 108,000 units × 2.51/unit		= 271,080		
		<u>+77,810</u>	(2021)	
		<u>348,890</u>	(accum. deprec.)

	Loss on Disposal.....	7,950	
	Truck		95,400
	<i>To record disposal of the truck;</i>		
	<i>\$19,875+ \$23,850 + \$23,850 + \$19,875 = \$87,450</i>		
	<i>accum. depreciation.</i>		

***Problem 9-20A (30 minutes)**

Part 1

a.

2017

Jun. 27	Depreciation Expense, Boat – Motor.....	2,660	
	Accumulated Depreciation, Boat – Motor		2,660
	<i>To update depreciation in 2017 regarding motor being replaced.</i>		

27	Boat – Motor (new)	63,000	
	Accumulated Depreciation, Boat – Motor	43,890 ¹	
	Loss on Disposal.....	9,310	
	Boat – Motor (old).....		53,200
	Cash		63,000
	<i>To record replacement of motor.</i>		

b.

Dec. 31	Depreciation Expense, Boat	3,113 ²	
	Accumulated Depreciation, Boat.....		3,113
	<i>To record revised depreciation for 2017 on the boat (boat body plus motor).</i>		

Calculations:

1. $53,200 \div 10 \text{ years} = 5,320/\text{year}$; $5,320 \times 9/12 = 3,990$ depreciation for 2009; $5,320 \times 7 \text{ years}$ for 2010thru 2016= 37,240; $5,320/\text{year} \times 6/12 = 2,660$ deprec. from Jan. 1/17to June 27/17; $37,240 + 3,990 + 2,660 = 43,890$ accumulated depreciation at June 27, 2017;

2. **Body:** Accumulated depreciation at Dec. 31, 2016:
 $23,800 - 7,000 = 16,800$; $16,800 \div 15 \text{ years} = 1,120/\text{year}$; $1,120 \times 9/12 = 840$ depreciation for 2009; $1,120 \times 7 \text{ years}$ (2010thru 2016) = 7,840; $7,840 + 840 = 8,680$
 Revised depreciation at Dec. 31, 2017(rounded):
 $23,800 - 8,680 - 7,000 = 8,120$ remaining depreciable cost;
 $8,120 \div 12.25^1 \text{ years} =$ **\$ 663***

¹ $20 - 7 \frac{9}{12} = 12 \frac{3}{12}$ or 12.25 years remaining useful life

Motor: $63,000 - 4,200 = 58,800$; $58,800 \div 12 \text{ years} = 4,900/\text{yr} \times 6/12 =$ **2,450**
\$3,113

*rounded to the nearest whole dollar since depreciation is based on estimates.

Part 2

Total 2017depreciation = \$2,660 + \$3,113 = \$5,773

	Land Improvements C.....	40,500	
	Cash		1,238,700
	<i>To record costs of plant assets.</i>		

Problem 9-2B (25 minutes)

Xentel Interactive		Balance Sheet		September 30	
		2017		2016	
Assets					
Current assets:					
Cash	\$	900		\$	2,700
Accounts receivable		1,800			4,320
Prepaid insurance		<u>-0-</u>			<u>1,530</u>
Total current assets			\$ 2,700		\$ 8,550
 Property, plant and equipment:					
Land			68,400		68,400
Machinery	\$295,200			\$115,200	
Less: Accumulated depreciation	<u>90,000</u>	205,200		<u>82,800</u>	32,400
Building	\$225,000			\$225,000	
Less: Accumulated depreciation	<u>54,000</u>	<u>171,000</u>		<u>50,400</u>	<u>174,600</u>
Total property, plant and equipment			444,600		275,400
Intangible assets:					
Copyright	\$	7,200		\$	7,200
Less: Accumulated amortization	<u>1,080</u>	<u>6,120</u>		<u>540</u>	<u>6,660</u>
Total assets			<u>\$453,420</u>		<u>\$290,610</u>
 Liabilities					
Current liabilities:					
Accounts payable	\$	4,320		\$	3,150
Unearned fees		<u>82,800</u>			<u>5,580</u>
Total current liabilities			\$ 87,120		\$ 8,730
Non-current liabilities:					
Notes payable, due in 2022			<u>230,220</u>		<u>55,800</u>
Total liabilities			\$317,340		\$ 64,530
Equity					
Mason Xentel, capital			<u>136,080*</u>		<u>226,080</u>
Total liabilities and equity			<u>\$453,420</u>		<u>\$290,610</u>

$$*226,080 - 72,000 + 540,000 - 558,000 = 136,080$$

Analysis component:

Xentel's assets were mainly financed by equity in 2016. In 2017, Xentel's assets were mainly financed by debt. The increase in the debt financing has weakened the balance sheet as opposed to strengthening it.

Problem 9-3B (30 minutes)

Part 1. Purchase made on January 1, 2017

A. Double-declining balance method

	2017	2018	2019
Machinery	\$588,000	\$588,000	\$588,000
Less: Accumulated depreciation.....	58,800	164,640	249,312
Year-end book value	\$529,200	\$423,360	\$338,688
Depreciation expense for the year¹	\$58,800	\$105,840	\$84,672

B. Straight-line method

Machinery	\$588,000	\$588,000	\$588,000
Less: Accumulated depreciation.....	26,600	79,800	133,000
Year-end book value	\$561,400	\$508,200	\$455,000
Depreciation expense for the year²	\$26,600	\$53,200	\$53,200

1. Rate = $2/10 = .20$ or 20%

2017: $20\% \times 588,000 \times 6/12 = 58,800$ note – using half year rule

2018: $20\% \times (588,000 - 58,800) = 105,840$

2019: $20\% \times (588,000 - 58,800 - 105,840) = 84,672$

2. $(588,000 - 56,000)/10 = 53,200 \times 6/12 = 26,600$

Problem 9-3B (continued)

Part 2. Purchase made on April 1, 2017

A. Double-declining balance method

	2017	2018	2019
Machinery	\$588,000	\$588,000	\$588,000
Less: Accumulated depreciation.....	58,800	164,640	249,312
Year-end book value	\$529,200	\$423,360	\$338,688
Depreciation expense for the year ¹	\$58,800	\$105,840	\$84,672

B. Straight-line method

Machinery	\$588,000	\$588,000	\$588,000
Less: Accumulated depreciation.....	26,600	79,800	133,000
Year-end book value	\$561,400	\$508,200	\$455,000
Depreciation expense for the year ²	\$26,600	\$53,200	\$53,200

3. Rate = 2/10 = .20 or 20%

2017: $20\% \times 588,000 \times 6/12 = 58,800$ (note – using half year rule)

2018: $20\% \times (588,000 - 58,800) = 105,840$

2019: $20\% \times (588,000 - 58,800 - 105,840) = 84,672$

4. $(588,000 - 56,000)/10 = 53,200 \times 6/12 = 26,600$

Problem 9-4B (30 minutes)

Year	Depreciation Method:		
	Straight-line	Double-declining balance	Units-of-production
2017	$(145,000 - 25,000)/5 =$ $24,000/\text{year} \times 2/12 =$ 4,000	Rate = $2/5 = .40$ or 40% $145,000 \times 40\% \times 2/12 =$ 9,667	Rate = $(145,000 - 25,000)/100,000 = 1.20/\text{km}$ $1.20 \times 5,800 =$ 6,960
2018	24,000	$(145,000 - 9,667) \times 40\% =$ 54,133	$1.20 \times 19,400 =$ 23,280

Truck.....	<u>24,120</u>	<u>2</u>	<u>20,880</u>
Total	<u>\$1,206,000</u>	<u>100%</u>	<u>\$1,044,000</u>

2017

Sept. 30	Building	574,200	
	Land	344,520	
	Land Improvements	104,400	
	Truck.....	20,880	
	Cash		1,044,000
	<i>To record asset purchases.</i>		

Part 2 2017straight-line depreciation on building:

$$(\$574,200 - 45,000)/15 \times 3/12 = \underline{\underline{\$8,820}}$$

Part 3 2017double-declining-balance depreciation on land improvements:

$$\text{Rate} = 2/8 = .25 \text{ or } 25\%$$

$$\$104,400 \times 25\% \times 3/12 = \underline{\underline{\$6,525}}$$

Problem 9-8B (45 minutes)

<u>Year</u>	<u>Straight-Line^a</u>	<u>Units-of-Production^b</u>	<u>Double-Declining-Balance^c</u>
2017	\$ 31,304	\$32,928	\$ 72,800
2018	46,956	51,744	80,080
2019	46,956	47,040	48,048
2020	46,956	44,688	28,829
2021	46,956	37,240	5,023*
2022	<u>15,652</u>	<u>21,140</u>	<u>0</u>
Totals	<u>\$234,780</u>	<u>\$234,780</u>	<u>\$234,780</u>

^aStraight- line:

$$\text{Cost per year} = (273,000 - 38,220)/5 \text{ years} = \$46,956 \text{ per year} \times 8/12$$

$$= \$31,304 \text{ for 2017}$$

$$= \$46,956/\text{year} \times 4/12 = \$15,652 \text{ for 2022}$$

^bUnits-of-production:

$$\text{Cost per unit} = (273,000 - 38,220)/168,000 \text{ units} = \$1.40 \text{ per unit}$$

(rounded)

<i>Year</i>	<i>Units</i>	<i>Unit Cost</i>	<i>Depreciation</i>
2017	23,520	\$1.40	\$32,928
2018	36,960	1.40	51,744
2019	33,600	1.40	47,040
2020	31,920	1.40	44,688
2021	26,600	1.40	37,240
2022	30,940	1.40	<u>21,140*</u>
Total			<u>\$234,780</u>

*Take only enough depreciation in Year 2022 to reach the maximum accumulated depreciation of \$234,780.

^cDouble-declining-balance:

$$\text{Rate} = 2/5 = .40 \text{ or } 40\%$$

$$2017: 40\% \times 273,000 \times 8/12 = 72,800$$

$$2018: 40\% \times (273,000 - 72,800) = 80,080$$

$$2019: 40\% \times (273,000 - 72,800 - 80,080) = 48,048$$

$$2020: 40\% \times (273,000 - 72,800 - 80,080 - 48,048) = 28,829$$

$$2021: 234,780 - 229,757^* = 5,023$$

*Take only enough depreciation in Year 2021 to reach the maximum accumulated depreciation of \$234,780.

Problem 9-9B (40 minutes)

Cost Information						Depreciation		
Description	Date of Purchase	Depreciation Method	Cost ¹	Residual	Life	Balance of Accum. Deprec. Apr. 30, 2017	Depreciation Expense for 2018	Balance of Accum. Deprec. Apr. 30, 2018
Equipment	Oct. 3/14	Straight-line	\$ 62,400	\$ 16,800	20 yr.	\$ 5,700 ¹	\$ 2,280 ²	\$ 7,980 ³
Machinery	Oct. 28/14	Units-of-production	540,000	180,000	100,000 units	73,332 ⁴	38,124 ⁵	111,456 ⁶
Tools	Nov. 3/14	Double-declining balance	64,000	15,000	5 yr.	45,568 ⁷	3,432 ⁸	49,000 ⁹

1. $(62,400 - 16,800)/20 = 2,280/\text{year} \times 2 \frac{6}{12} = \underline{5,700}$
2. $(62,400 - 16,800)/20 = \underline{2,280/\text{year}}$
3. $5,700 + 2,280 = \underline{7,980}$
4. Rate = $(540,000 - 180,000)/100,000 = 3.60/\text{unit}$;
 2015: $940 \times 3.60 = 3,384$
 2016: $10,150 \times 3.60 = 36,540$
 2017: $9,280 \times 3.60 = \underline{33,408}$
73,332
5. $10,590 \times 3.60 = \underline{38,124}$
6. $73,332 + 38,124 = \underline{111,456}$
7. Rate = $2/5 = .40$ or 40%
 2015: $40\% \times 64,000 \times 6/12 = 12,800$
 2016: $40\% \times (64,000 - 12,800) = 20,480$
 2017: $40\% \times (64,000 - 12,800 - 20,480) = \underline{12,288}$
 Accumulated depreciation at Apr. 30, 2017 = \$45,568
8. 2018: $(64,000 - 15,000) - 45,568 = \underline{3,432}$
9. $45,568 + 3,432 = \underline{49,000}$

Problem 9-10B (20 minutes)

2017

		20		

	Cost	Accumulated Depreciation	Residual	
2.	<u>117,600</u>	<u>38,400</u>	<u>6,000</u>	= <u>7,320</u>
		10		

Problem 9-12B (40 minutes)

2017

Jan. 3	Warehouse – Furnace (new)	39,000	
	Accumulated Depreciation, Warehouse – Furnace	18,153 ¹	
	Loss on Disposal	8,847	
	Warehouse – Furnace (old)		27,000
	Accounts Payable		39,000

To record installation of new warehouse furnace.

Calculations:

- 2012 Deprec.: $27,000 \times 2/10 = 5,400$;
 2013 Deprec.: $(27,000 - 5,400) \times 2/10 = 4,320$;
 2014 Deprec.: $(27,000 - 9,720) \times 2/10 = 3,456$;
 2015 Deprec.: $(27,000 - 13,176) \times 2/10 = 2,765$;
 2016 Deprec.: $(27,000 - 15,941) \times 2/10 = 2,212$;
 Accum. Deprec. Dec. 31, 2016 = $5,400 + 4,320 + 3,456 + 2,765 + 2,212 = 18,153$.

Part 2

Windows	$51,750 \div 15 =$	\$ 3,450
Doors	$105,000 \div 20 = 5,250/\text{yr}$; $5,250/\text{yr} \times 5 \text{ yrs} = 26,250$ Accum. Dep.; $105,000 - 26,250 = 78,750$ book value; $78,750 - 23,100 = 55,650$ revised depreciable value; $55,650 \div (12 \text{ yrs} - 5 \text{ yrs} = 7 \text{ yrs}) =$	7,950
Roofing	$43,500 \div 10 =$	4,350
Siding	$54,000 \div 25 =$	2,160
Framing/Walls	$222,000 - 60,000 = 162,000$; $162,000 \div 30 =$	5,400
Furnace	$39,000 \times 2/16 =$	4,875
Misc.	Maximum allowable depreciation reached ¹	-0-
Total depreciation expense to be recorded on the warehouse for 2017 =		<u>\$28,185</u>

- 2012: $61,500 \times 2/5 = 24,600$;
 2013: $(61,500 - 24,600) \times 2/5 = 14,760$;
 2014: $(61,500 - 39,360) \times 2/5 = 8,856$;
 2015: $(61,500 - 48,216) \times 2/5 = 5,314$;
 2016: $(61,500 - 53,530) \times 2/5 = 3,188$ which exceeds max. allowable accumulated depreciation of 54,000 therefore the maximum that can be recorded in 2016 is $54,000 - 53,530 = 470$ with no depreciation recorded in any subsequent years.

Calculations:

1. 241,250 cost – 23,750 impairment loss = 217,500
2. 72,500 cost – 26,000 impairment loss = 46,500
3. 407,875 adjusted capital balance + 1,227,500 revenues – 1,246,750 expenses – 26,000 impairment loss, computer equip. – 23,750 impairment loss, machinery. = 338,875 post-closing capital balance

Analysis component:

The recording of an impairment loss causes expenses to increase which in turn causes net income to decrease. Decreases in income cause equity on the balance sheet to decrease.

Problem 9-14B (45 minutes)

Part 1

2017

Mar.	2	Depreciation Expense, Van	1,575	
		Accumulated Depreciation, Van ¹		1,575
		<i>To record depreciation on van for 2017.</i>		
	2	Cash	17,920	
		Accumulated Depreciation, Van ¹	42,175	
		Loss on Disposal	4,305	
		Van		64,400
		<i>To record sale of van.</i>		

Part 2

Aug.	27	Depreciation Expense, Machinery	12,642	
		Accumulated Depreciation, Machinery ²		12,642
		<i>To record depreciation on machinery for 2017.</i>		
	27	Cash	95,718	
		Accumulated Depreciation, Machinery ²	33,082	
		Machinery		128,800
		<i>To record sale of machinery.</i>		

Part 3

June 29		Depreciation Expense, Equipment	3,500	
		Accumulated Depreciation, Equipment ³		3,500
		<i>To record depreciation on equipment for 2017.</i>		
	29	Cash	27,720	
		Accumulated Depreciation, Equipment ³	48,300	
		Gain on Disposal		420
		Equipment		75,600
		<i>To record sale of equipment.</i>		

Calculations:

1. Depreciation from Feb. 1/17 to Mar. 2/17:		
<u>64,400</u>	– 40,600	– 9,800
= \$0.35/km × 4,500 km =		1,575
40,000		
		<u>+ 40,600</u>
		<u>42,175</u>

(calculations continued on next page)

Problem 9-14B (concluded)

2. Depreciation from Feb. 1/17 to Aug. 27/17:	
$128,800 - 20,440 = 108,360$ Book Value	
Rate = $2/10 = .20$ or 20%	
$108,360 \times 20\% \times 7/12 =$	12,642
	<u>+ 20,440</u>
	<u>33,082</u>
3. Depreciation from Feb. 1/17 to June 29/17:	
$\frac{75,600 - 44,800 - 5,600}{3} \times 5/12 =$	3,500
	<u>+ 44,800</u>
	<u>48,300</u>

Problem 9-15B (60 minutes)

Part 1

2017

Jan.	1	Machine	156,000	
		Cash		156,000
		<i>To record purchase of machine.</i>

***Problem 9-20B (40 minutes)**

1.a.	2017		
	Oct. 3	Depreciation Expense, Equipment – Fan	3,840
		Accum. Deprec., Equipment – Fan	3,840
		To update depreciation on replaced fan from Jan 1/17to Oct 3/17.	
	3	Cash.....	8,400
		Accum. Deprec., Equipment – Fan	28,800¹
		Equipment – Fan (old)	32,400
		Gain on Disposal.....	4,800
		To record sale of replaced fan on the equipment.	
	3	Equipment – Fan (new).....	36,000
		Cash	36,000
		To record purchase of replacement fan on equipment.	
1.b.	Dec. 31	Depreciation Expense, Equipment	22,370²
		Accum. Deprec., Equipment.....	22,370
		To record depreciation for 2017on the equipment (sum of all components).	

Calculations:

- $32,400 - 3,600 = 28,800$; $28,800 \div 5 \text{ yrs} = 5,760/\text{yr}$;
 $5,760 \times 4/12 = 1,920$ deprec. for 2012;
 $5,760/\text{yr} \times 4 \text{ yrs (2013to 2016inclusive)} = 23,040$;
 $5,760/\text{yr} \times 8/12$ (max depreciation to depreciate 5 years) = 3,840 deprec. from Jan. 1/17to Oct. 3/17;
 $1,920 + 23,040 + 3,840 = 28,800$ accum. deprec. at Oct. 3/17.

***Problem 9-20B (continued)**

2. Metal Frame	$144,000 - 36,000 = 108,000$; $108,000 \div 20 \text{ yrs} = 5,400/\text{yr}$; $5,400/\text{yr} \times 4/12 = 1,800$ deprec. for 2012; $5,400/\text{yr} \times 4 \text{ yrs (2013 to 2016 inclusive)} = 21,600$; $1,800 + 21,600 = 23,400$ accum. deprec. at Dec. 31/16; Revised deprec. = $144,000 - 23,400$ accum. deprec. = $120,600$ remaining book value; $120,600 - (36,000 - 12,000 =$ $24,000 \text{ residual value}) = 96,600$ remaining depreciable cost; $96,600 \div 20 \text{ yrs} =$	\$4,830
Engine	2012: $96,000 \times 2/10 \times 4/12 = 6,400$ 2013: $96,000 - 6,400 = 89,600 \times 2/10 = 17,920$ 2014: $89,600 - 17,920 = 71,680 \times 2/10 = 14,336$ 2015: $71,680 - 14,336 = 57,344 \times 2/10 = 11,469$ 2016: $57,344 - 11,469 = 45,875 \times 2/10 = 9,175$ 2017: $45,875 - 9,175 = 36,700 \times 2/10 =$	7,340
New Fan	$36,000 - 4,800 = 31,200$; $31,200 \div 5 \text{ yrs} = 6,240 \times 3/12 =$	1,560
Conveyor System	$126,000 - 39,600 = 86,400$; $86,400 \div 10 \text{ yrs} =$	8,640
Misc. Parts	2012: $27,600 \times 2/5 \times 4/12 = 3,680$ 2013: $27,600 - 3,680 = 23,920 \times 2/5 = 9,568$ 2014: $23,920 - 9,568 = 14,352 \times 2/5 = 5,741$ 2015: $14,352 - 5,741 = 8,611 \times 2/5 = 3,444$ 2016: $8,611 - 3,444 = 5,167 \times 2/5 = 2,067$ which exceeds max.; maximum that can be taken in 2016 is $5,167 - 4,800 =$ 367 ; therefore, no depreciation is taken in 2017	-0-
		<u>\$22,370</u>

Part 2

Total 2017 depreciation = \$3,840 + \$22,370 = \$26,210

ANALYTICAL AND REVIEW PROBLEMS

A&R Problem 9-1

The following points should be set out in the report:

- 1. Assets on which depreciation was charged were purchased for use in the business and not for resale. Therefore, the fact that they may be sold for more than cost is not relevant since, in keeping with the cost principle, PPE are maintained in the accounting records at cost.**
- 2. Because these assets are subject to both physical and economic (obsolescence) deterioration, they have a limited useful life span, however long it may be, and their cost, less any residual value, must be allocated over their useful life.**
- 3. Maintenance expenditures maintain these assets in a properly functioning order. They, however, do not eliminate the fact of physical and economic deterioration.**
- 4. Not charging periodic depreciation is in violation of the matching principle and results in an understatement of expenses and overstatement of net income.**
- 5. Depreciation is a process of allocation not of valuation.**

ETHICS CHALLENGE

- 1. When managers acquire new assets a variety of decisions relative to depreciation must be made. The asset must be assigned a useful life and residual value, and a method of depreciation must be chosen.**
- 2. It is true that managers can choose a useful life and residual value based on an estimate. However, the estimated life should be the manager's realistic expectation of how long the asset will actually be used in the operations of the business. The estimated residual value should not be arbitrary; it should reflect expectations of the recoverable value of the asset at the end of its useful life to the business, even if it is zero. The depreciation method should reflect a systematic allocation of the asset's cost based on how the asset is actually consumed by the business.**
- 3. By selecting a useful life that is significantly greater than what is realistic in combination with an unreasonably high residual value, the profit margin will be overstated since depreciation expense will be greatly understated.**

FOCUS ON FINANCIAL STATEMENTS

FFS9-1

a.

Cost Information						Depreciation/Amortization		
Description	Date of Purchase	Deprec. Method	Original Cost	Residual	Life	Accum. Balance Dec. 31, 2016	Expense for 2017	Accum. Balance
Land	July 3/14		\$280,000			n/a	n/a	n/a
Building	July 3/14	S/L	454,000	\$40,000	15 yr.	\$ 69,000 ¹	\$46,000 ²	\$115,000

Calculations:

- $(454,000 - 40,000)/15 = 27,600/\text{year} \times 6/12 = 13,800$ for 2014
 $27,600$ for 2015
27,600 for 2016
69,000 Accum. deprec. at Dec. 31/16
- $(454,000 - 40,000 - 69,000)/(10 - 2.5 = 7.5) = 46,000$ for 2017
- $(150,000 - 30,000)/250,000 = \$0.48/\text{unit}$
 - $\times 45,000 = 21,600$ for 2014
 - $\times 55,000 = 26,400$ for 2015
 - $\times 52,000 = 24,960$ for 201672,960 Accum. deprec. at Dec. 31/16
- $\$0.48/\text{unit} \times 65,000 = 31,200$ for 2017
- $(298,800 - 30,000)/7 = 38,400/\text{year} \times 10/12 = 32,000$ for 2014
 $38,400$ for 2015
38,400 for 2016
108,800 Accum. deprec. Dec. 31/16
- $(298,800 - 30,000)/7 = 38,400/\text{year}$ depreciation for 2017

FFS 9-1 (continued)

7. $24,000 \times \frac{2}{5} \times \frac{10}{12} = 8,000$ for 2014
 $(24,000 - 8,000) \times \frac{2}{5} = 6,400$ for 2015
 $24,000 - (8,000 + 6,400) \times \frac{2}{5} = \underline{3,840}$ for 2016
18,240 Accum. deprec. Dec. 31/16

8. $[24,000 - (8,000 + 6,400 + 3,840)] \times \frac{2}{5} \times \frac{3}{12} = \underline{576}$ for 2017

9. $(103,800 - 0)/5 = 20,760/\text{year} \times \frac{2}{12} = 3,460$ for 2015
20,760 for 2016
24,220 Total dep. taken to Dec. 31/16

10. This has a -0- balance at December 31, 2014 because the asset was disposed of (donated to charity).

11.

	Appraised Values	Ratio	Cost Allocation
Office Equipment	96,000	$96/168 \times 114,000$	= 65,143
Furniture	<u>72,000</u>	$72/168 \times 114,000$	= <u>48,857</u>
Totals	<u>168,000</u>		<u>114,000</u>

12. $65,143 \times \frac{2}{4} \times \frac{9}{12} = \underline{24,429}$ for 2017

13. $48,857 \times \frac{2}{5} \times \frac{9}{12} = \underline{14,657}$ for 2017

FFS 9-1 (continued)

b.

**Times TeleCom
Income Statement

FFS 9-2

Part 1

NOTE: Both Danier Leather and WestJet use the term 'amortization' instead of 'depreciation' in the statements referenced in this question. To be consistent with the textbook, the answers use the term 'depreciation'.

- a.
The \$16,826 (thousand) represents the book value of the PPE. The June 28, 2014, book value is the \$46,166 (thousand) total cost of the PPE assets less the \$28,161 (thousand) total accumulated depreciation of the PPE. (Note to instructor: Point out to students that this additional information — cost and accumulated depreciation — is found in Danier's Note 6 of the financial statements.)
- b. The full disclosure principle requires financial statements to report all relevant information about the operations and financial position of the entity. In conformance with the full disclosure principle, information in addition to the \$16,826 (thousand) book value is reported in Note 1(k) (depreciation methods) and Note 6 (cost, accumulated depreciation, and book value).
- c. The depreciation expense for the year ended June 28, 2014, was \$3,517 (thousand). Although depreciation expense typically appears on the income statement, Danier does not detail it there but these amounts do appear on the statement of cash flows and in Note 6.

Part 2

- a. WestJet's property and equipment at December 31, 2014 is 60.11% of total assets calculated as $(\$2,793,194/\$4,646,433) \times 100$.
- b. Indigo's property, plant and equipment at March 29, 2014 represent 11.41% of total assets calculated as $(\$58,476,000/\$512,588,000) \times 100$.
- c. WestJet and Indigo operate in different industries: WestJet is an airline while Indigo operates bookstores. As such, WestJet has relatively little inventory in comparison to Indigo. Indigo's inventory at March 29, 2014 is \$218,979 thousand or 42.72% of total assets (calculated as $\$218,979,000/\$512,588,000 \times 100$). Indigo's inventory represents close to half of its total assets while WestJet's property and equipment represent over half of its assets. Indigo needs a large stock of inventory in order to operate. WestJet primarily needs property and equipment (planes) to operate its business. Therefore, it seems logical that the mix of assets would be different for each company.

2. CRITICAL THINKING MINI-CASE

CT 9-1

Note to instructor: Student responses will vary and therefore the answer here is only suggested and not inclusive of all possibilities; it is presented in point form for brevity.

Problem:

- Taking the perspective of both the external and internal auditors, there is a problem with how a number of revenue expenditures were recorded as capital expenditures.

Goal:*

- To identify which transactions were recorded incorrectly, correct them, and restate net income on the income statement and restate assets and equity on the balance sheet.
- Another goal, from the perspective of the auditor, would be to bring these issues to the attention of the board of directors for their action because there may be ethical concerns regarding the behaviour of the business manager (bonus is tied to income so he/she may be manipulating the recording of transactions to maximize income).

Principles:

- The matching principle has been violated; it requires costs to be allocated or matched to the period in which it helped generate revenues.
- The prudence principle was also violated; it states that assets and income should never be overstated.
- Another GAAP requires consideration: materiality. If the misstatements are not material in nature (not significant in dollar amount so that the decisions of shareholders would not have been affected), the conclusions are affected. Therefore, we must look at the numbers to determine whether materiality has been violated or not.

CT 9-1 (continued)

Facts:

as stated in the mini case

—The insurance was incorrectly debited to the Truck account; it should have been debited to a current asset account: Prepaid Insurance. The result of this error is an overstatement of net income in 2015 of \$7,800 ($36,000/24 \text{ months} = 1,500/\text{month}$ insurance used $\times 10 \text{ months} = 15,000$ for 2015 vs. $36,000/5 \text{ yrs useful life} = 7,200$; $15,000 - 7,200 = 7,800$). 2015 net income is not known but if it is assumed that it approximates 2016 net income as reported (\$78,000), then the \$7,800 overstatement of net income in 2015 is material in nature since it approximates 10%.

—The net income in 2016 would also have been materially overstated; by \$10,800 ($1,500$ insurance expense per month $\times 12 \text{ months used} = 18,000 -$ depreciation of $7,200 = 10,800$). Net income in 2017 would have been understated by \$4,200 ($7,200$ depreciation $- 3,000$ insurance used $= 4,200$).

—It is unclear from the information provided how the insurance renewal was treated: as a capital or revenue expenditure; this would have affected the impact of the misstatement in 2017.

—It is unclear from the information provided whether revised depreciation was calculated when the subsequent expenditures (motors) were debited to the truck account (which is correct assuming that the motors enhanced the trucks which is likely). We will assume that this was treated correctly (capital expenditure with resulting calculation of revised depreciation) given no information to the contrary. The \$32,000 and \$2,500 costs regarding the tires and brakes were capitalized in error; they should have been expensed when incurred in 2017. Therefore, net income in 2017 is overstated by a potential \$34,500 ($32,000 + 2,500$) — I say potential because it is unclear whether revised depreciation was calculated on the truck; this additional depreciation would affect the amount of any misstatement in 2016 and 2017.

—There is also the issue of when the bonus was recorded; these were recorded in the incorrect accounting periods (recorded when paid as opposed to the period which triggered the cost — violation of matching and realization principles). In addition, because the bonuses were based on overstated net income amounts, the bonuses would have been overstated for 2015 and 2016 and potentially in 2017.

—It appears that the 2016 net income was overstated by almost 50%.

Conclusions/Consequences:

- **To do 'nothing' would mean that shareholders/owners are making decisions based on inaccurate information.**
- **If the manager did, in fact, engage in unethical actions, a longer term implication from the perspective of the manager is that he/she may lose their job and future employability prospects in addition to damaging the credibility of the company and its share values assuming it is publicly held.**
- **The board of directors need to be made aware of the errors made in recording capital expenditures so that they can deal appropriately with the manager responsible and negative repercussions with shareholders/owners.**

***The goal is highly dependent on perspective.**

Chapter Outline

Property, plant and equipment (LO1)

Property, plant and equipment may be tangible or intangible. Assets used in the operations to help generate revenue and have a useful life of more than one accounting period are property, plant and equipment.

Cost of Property, plant and equipment

- A. Consistent with cost principle, property, plant and equipment are recorded at cost. Cost includes all normal and reasonable expenditures necessary to get the asset in place and ready for its intended use.
- B. Subsequent expenditures may be incurred after an asset is placed in service. *Capital expenditures* are costs of PPE that provide material benefits extending beyond the current period. They are debited to PPE accounts and appear on the balance sheet. *Revenue expenditures* are normal costs incurred to keep an asset in its normal running condition. They are expenses and would appear on the income statement.
- C. Subsidiary ledgers may be kept for maintaining control of large numbers of assets. Low cost asset purchases are usually expensed under the materiality principle.
- D. Low cost assets may be expensed (treated as revenue expenditures) under the *materiality principle*.
- E. Land purchased as a building site—cost includes purchase price, commissions, title insurance, legal fees, accrued property taxes, surveying, clearing, landscaping, and local government assessments (current or future) for streets, sewers, etc. Also includes cost of removal of any existing structures (less proceeds from sale of residual material)
- F. Land Improvements—Costs that increase the usefulness of the land.
 - 1. Examples: parking lot surfaces, driveways, fences, and lighting systems have limited useful lives.
 - 2. Costs are charged to a separate Land Improvement account.
 - 3. Costs are allocated to the periods they benefit through depreciation.
- G. Buildings
 - 1. If purchased—Cost usually include its purchase price, brokerage fees, taxes, title fees, attorney costs, and all expenditures to make it ready for its intended use. (any necessary repairs or renovations such as wiring, lighting, flooring and wall coverings).
 - 2. If constructed for own use—Costs includes materials and labour plus a reasonable amount of indirect overhead cost (heat, lighting, power, and depreciation on machinery used to construct the asset). Cost also includes design fees, building permits, and insurance during construction.
- H. Leasehold improvements are alterations or improvements made to leased property. Leasehold improvements become part of the property and revert to the lessor at the end of the lease. These amounts are depreciated over the life of the lease or life of the improvements, whichever is less.
- I. Machinery and Equipment—costs include all normal and necessary expenditures to purchase them and prepare them for their intended use (purchase price, taxes, transportation charges, insurance while in transit, and the installing, assembling and testing of machinery and equipment).

J. Lump-Sum Purchase—a group of property, plant and equipment purchased with a single transaction for a lump-sum price. Individual asset cost determined by allocating the cost of the purchase among the different types of assets acquired based on their relative values.

Depreciation (LO2)

The process of allocating to expense the cost of a capital asset to the accounting periods benefiting from its use. Recorded as a debit to Depreciation Expense and a credit to Accumulated Depreciation.

A. Factors in Computing Depreciation

1. Cost—described above.
2. Residual value—(*residual value*) an estimate of the asset's value at the end of its benefit period.
3. Useful life—(*service life*) length of time the asset is expected to be productively used in a company's operations. Factors affecting useful life include:
 - a) *Inadequacy*—a condition in which the capacity of property, plant and equipment becomes too small for the productive demands of the business.
 - b) *Obsolescence*—a condition in which, because of new inventions and improvements, a capital asset can no longer be used to produce goods or services with a competitive advantage.

B. Depreciation Methods

1. Straight-line Method—charges the same amount to expense for each period of the asset's useful life. *Calculation:*
 - Cost minus residual value (*equals the cost to be depreciated*) divided by the asset's useful life. (*usually in years*)
2. Units-of-Production Method—charges a varying amount to expense for each period of an asset's useful life depending on its usage. Charges are based on the consumed capacity of the asset. Examples of capacity measurements: miles driven, product outputs, hours used.
Calculation:
 - Cost minus residual value divided by the number of units to be produced equals the *depreciation per unit*.
 - Depreciation per unit X number of units consumed in period equals the period's depreciation.
3. Declining-Balance Method—an accelerated depreciation method. Charges larger depreciation during the early years of an asset's life and smaller expenses in the later years.
Double-declining balance method (DDB) is also referred to as being twice the straight line rate.
4. *Calculation:*

Calculate the rate. $2/\text{useful life} = \%$ (or $100\%/\text{useful life} \times 2$)

Calculate annual depreciation as :

Net Book Value X Rate

Note: Depreciation is a method of allocation, not of valuation. The cost of a capital

asset, less estimated residual, is allocated over the estimated useful life in a systematic and rational manner. The amount of depreciation charged per year may vary with the different methods. However, the total depreciation over an asset's life will be the same regardless of which method is used.

Depreciation for Tax Reporting—differences between financial and tax accounting systems are normal and expected.

1. Many companies use accelerated depreciation in computing taxable income because it postpone its tax payments by charging higher depreciation expense in the early years and lower amounts in the later years.
4. Federal income tax regulations require a company to depreciate assets according to the Capital Cost Allowance system (CCA)
5. The income tax regulations specify maximum CCA rates that businesses may claim but a business may decide to claim less than the maximum or claim none at all.

Partial Year Depreciation (LO3)

When an asset is purchased (or disposed of) at a time other than the beginning or end of an accounting period, depreciation is recorded for the part of the year the asset was in use. The two methods we will examine are:

1. Nearest whole month, depreciation is calculated if the asset was in use for more than half of the month of acquisition.
2. Half-Year Convention, six months depreciation is recorded for the partial year, regardless of when the asset was acquired.

Revising Depreciation Rates (LO4)

A. If estimated residual value and/or useful life is revised:

Depreciation expense calculations are revised by spreading the remaining cost to be depreciated over the revised useful life remaining.

Calculation:

Remaining Book value-Revised residual value

Revised remaining useful life

The revision is referred to as a *change in an accounting estimate* and is reflected in future financial statements. Past statements are not changed.

B. Subsequent Capital Expenditures:

Subsequent capital expenditures will change the book value of the asset. A revision to depreciation is required to reflect the change. The first step is to bring depreciation up to date at the time of the subsequent capital expenditure. (using the original rate) The capital expenditure may involve replacing a portion of an asset or adding to the asset without removing any portion. A journal entry is done to record the addition or the addition and removal of an old part. If an old part is removed there may be a loss recorded. Depreciation is then calculated at the revised rate.

Impairment of PPE Assets (LO5)

An impairment loss happens when a PPE item's book value is greater than the amount to be recovered through the asset's use or sale. Assets should be assessed for impairment annually. Technological, economic or legal factors can all cause impairments to occur. The journal entry to record impairment:

Date	Impairment loss	XX
	Asset account	XX

The asset's book value will be reduced. Depreciation would be revised to reflect this change.

Disposals of property, plant and equipment (LO6)

Assets may be *discarded, sold, or exchanged* due to wear and tear, obsolescence, inadequacy, or damage by fire or other accident.

A. In general, accounting for disposals requires the following steps:

1. Record depreciation expense up to the date of disposal. This updates the accumulated depreciation account.
2. Remove the balances of the disposed asset and related accumulated depreciation accounts.
3. Record any cash (and other assets) received or paid in the disposal.
4. Record any gain or loss resulting from comparing the asset's book value with the value received in the disposal.

B. Discarding Property, plant and equipment—follow general accounting procedure above.

1. If fully depreciated—no loss (can never have a gain if discarding)
2. If not fully depreciated—Record a loss (debit) equal to the book value.

C. Selling Property, plant and equipment—follow general accounting procedure above.

Compare value received to book value to determine gain (receive value greater than book value) or loss (receive value less than book value).

1. Sale is at a gain if value received exceeds book value.
2. Sale is at a loss if value received is less than book value.

Students frequently have difficulty in deriving the journal entry involving a gain or loss. It is very helpful to have them journalize the parts of the entry that they already know such as cash received, debit to accumulated depreciation and credit to the asset account. I usually leave a space between the debits and credits and show the calculation as being the difference between the two sides. A debit or credit can then be recorded with the entry still in the correct order. They just have to fill in the space!

D. Exchanging assets

Assets are often exchanged (traded-in) for new assets. The exchange is treated as a sale of the old asset and the purchase of a new asset. The cost and accumulated depreciation of the old asset is removed from the books. The cost of the new asset will be recorded at the fair value of the asset(s) received. If the fair value cannot be reliably determined, the new asset will be recorded at the carrying value of the assets given up. Any gains or losses realized on the exchange are recorded at the time of disposal.

Intangible Assets (LO7)

Intangible assets have no physical substance but provide future economic benefits. This is a difficult topic for students to grasp. Examples include patents, copyrights, leaseholds, drilling rights and trademarks. Accounting for intangibles is similar to accounting for PPE. Intangibles are recorded at cost when purchased. Cost is allocated to the asset over its useful life through amortization. The asset account itself is reduced. There is no accumulated account used. In this way intangibles will always be shown at net book value. Intangible assets are shown on the balance sheet separately from goodwill and property, plant and equipment.

APPENDIX 9A (LO8)

Revised Depreciation When There Is a Subsequent Capital Expenditure That Creates Partial Period Depreciation

In this case depreciation is calculated and recorded using the following steps:

1. Depreciation on the asset is updated to the date of the subsequent capital expenditure.
2. The subsequent capital expenditure is recorded.
3. If the subsequent capital expenditure is a replacement, the component being replaced is removed from the books and any resulting gain or loss is recorded.
4. Revised depreciation is calculated.

VISUAL #9-1

FORMULAE FOR DEPRECIATION METHODS

1. STRAIGHT LINE

$$\frac{\text{Cost-Estimated Residual Value}}{\text{Estimated Useful Life (in years)}} = \text{Annual Depreciation}$$

2. UNITS OF PRODUCTION

$$\text{a) } \frac{\text{Cost- Estimated Residual Value}}{\text{Predicted units of production}} = \frac{\text{Depreciation}}{\text{per Unit}}$$

$$\text{b) Depreciation per unit} \times \text{units produced} = \text{Depreciation for PERIOD}$$

Depreciation should stop when book value is equal to residual value.

3. DOUBLE DECLINING BALANCE

Step 1: Calculate rate to be used---2/Estimated useful life

Step 2. Multiply Net Book Value by Rate

$$\text{Net Book Value} = \text{Cost} - \text{Accumulated Depreciation to Date}$$

Depreciation should stop when book value is equal to residual value.

Alternate Demo Problem Chapter 9

A new machine cost \$100,000, has an estimated useful life of five years and an estimated residual value of \$15,000 at the end of that time. It is expected that the machine can produce 170,000 widgets during its useful life.

The New Times Company purchases this machine on January 1, 2017, and uses it for exactly three years. During these years the annual production of widgets has been 80,000, 50,000, and 30,000 units, respectively. On January 1, 2017, the machine is sold for \$45,000.

Required:

1. Calculate the depreciation expense for each of the first three years using
 - a. straight-line
 - b. units-of-production
 - c. double-declining-balance

2. Prepare the proper journal entry for the sale of the machine under the three different depreciation methods.

Solution to Alternate Demo Problem Chapter 9

1a. Straight-line

The depreciation expense each year is equal to (cost - residual) / useful life. In this example the cost is \$100,000, the residual is \$15,000, and the useful life is 5 years. Therefore,

$$\begin{aligned}\text{Annual depreciation} &= (100,000 - 15,000) / 5 \\ &= 17,000 \text{ each year}\end{aligned}$$

1b. Units-of-production

The depreciation expense each year is equal to a rate [(cost-residual) / total production] multiplied by the actual number of units produced that year. In this example the rate would be \$0.50 per widget, $(100,000 - 15,000) / 170,000$, and the depreciation expense for each of the first three years would be:

$$\begin{array}{rclclcl} 2017 & = & .50 & \times & 80,000 & = & 40,000 \\ 2018 & = & .50 & \times & 50,000 & = & 25,000 \\ 2019 & = & .50 & \times & 30,000 & = & 15,000 \end{array}$$

1c. Double-declining-balance

The depreciation expense each year is equal to a rate (twice the straight-line rate, or $2 / \text{useful life}$) multiplied by the asset's net book value (cost less accumulated depreciation) at the beginning of the year. In this example the rate would be $2/5$, or 40%, and the depreciation expense for each of the first three years would be

$$\begin{array}{rclclcl} 2017 & = & .40 & \times & 100,000 & = & 40,000 \\ 2018 & = & .40 & \times & 60,000 & = & 24,000 \\ 2019 & = & .40 & \times & 36,000 & = & 14,400 \end{array}$$

2. The journal entry for the sale of the asset will have the same general form regardless of the method of depreciation adopted, except that whether there is a gain or a loss on the sale may change according to the depreciation method used. The gain or loss on disposal of the asset is determined by comparing the sale price, in this case \$45,000, with the net book value of the asset at the time of the sale.

Straight-line

Cash	45,000	
Accumulated depreciation	51,000	
Loss on sale of machine.....	4,000	
Machine		100,000

Units-of-production

Cash	45,000	
Accumulated depreciation	80,000	
Machine		100,000
Gain on sale of machine.....		25,000

Double-declining-balance

Cash	45,000	
Accumulated depreciation	78,400	
Machine		100,000
Gain on sale of machine.....		23,400

Alternate Demo Problem Chapter 9

A new machine cost \$100,000, has an estimated useful life of five years and an estimated residual value of \$15,000 at the end of that time. It is expected that the machine can produce 170,000 widgets during its useful life.

The New Times Company purchases this machine on January 1, 2017, and uses it for exactly three years. During these years the annual production of widgets has been 80,000, 50,000, and 30,000 units, respectively. On January 1, 2017, the machine is sold for \$45,000.

Required:

1. Calculate the depreciation expense for each of the first three years using
 - a. straight-line
 - b. units-of-production
 - c. double-declining-balance

2. Prepare the proper journal entry for the sale of the machine under the three different depreciation methods.

Solution to Alternate Demo Problem Chapter 9

1a. Straight-line

The depreciation expense each year is equal to (cost - residual) / useful life. In this example the cost is \$100,000, the residual is \$15,000, and the useful life is 5 years. Therefore,

$$\begin{aligned} \text{Annual depreciation} &= (100,000 - 15,000) / 5 \\ &= 17,000 \text{ each year} \end{aligned}$$

1b. Units-of-production

The depreciation expense each year is equal to a rate [(cost-residual) / total production] multiplied by the actual number of units produced that year. In this example the rate would be \$0.50 per widget, (100,000-15,000)/ 170,000, and the depreciation expense for each of the first three years would be:

$$\begin{array}{rclclcl} 2017 & = & .50 & \times & 80,000 & = & 40,000 \\ 2018 & = & .50 & \times & 50,000 & = & 25,000 \\ 2019 & = & .50 & \times & 30,000 & = & 15,000 \end{array}$$

1c. Double-declining-balance

The depreciation expense each year is equal to a rate (twice the straight-line rate, or 2 / useful life) multiplied by the asset's net book value (cost less accumulated depreciation) at the beginning of the year. In this example the rate would be 2/5, or 40%, and the depreciation expense for each of the first three years would be

$$\begin{array}{rclclcl} 2017 & = & .40 & \times & 100,000 & = & 40,000 \\ 2018 & = & .40 & \times & 60,000 & = & 24,000 \\ 2019 & = & .40 & \times & 36,000 & = & 14,400 \end{array}$$

2. The journal entry for the sale of the asset will have the same general form regardless of the method of depreciation adopted, except that whether there is a gain or a loss on the sale may change according to the depreciation method used. The gain or loss on disposal of the asset is determined by comparing the sale price, in this case \$45,000, with the net book value of the asset at the time of the sale.

Straight-line

Cash	45,000	
Accumulated depreciation	51,000	
Loss on sale of machine.....	4,000	
Machine		100,000

Units-of-production

Cash	45,000	
Accumulated depreciation	80,000	
Machine		100,000
Gain on sale of machine.....		25,000

Double-declining-balance

Cash	45,000	
Accumulated depreciation	78,400	
Machine		100,000
Gain on sale of machine.....		23,400

Fundamental ACCOUNTING PRINCIPLES

Fifteenth Canadian Edition

Volume 2

LARSON • JENSEN • DIECKMANN

Property, Plant and Equipment and Intangibles

CHAPTER

9

PowerPoint Slides to accompany
Fundamental Accounting Principles, 15ce

Prepared by

Betty Young, Red River College

© 2016 McGraw-Hill Education

Learning Objectives

1. Describe property, plant and equipment (PPE) and calculate their cost. (LO¹)
2. Explain, record, and calculate depreciation using the methods of straight-line, units of production, and double-declining balance. (LO²)
3. Explain and calculate depreciation for partial years. (LO³)

Learning Objectives

4. Explain and calculate revised depreciation. (LO⁴)
5. Explain and record impairment losses. (LO⁵)
6. Account for asset disposal through discarding, selling, or exchanging an asset. (LO⁶)
7. Account for intangible assets and their amortization. (LO⁷)

Learning Objectives

8. Explain and calculate revised depreciation when there is a subsequent capital expenditure that creates partial period depreciation. Appendix 9A (LO⁸)

Vignette Video

YVR Builds State-of-the-Art Airside Operations Building: Vancouver Airport Authority is building a new state-of-the-art Airside Operations Building. The facility, scheduled to open in January 2015, will consolidate all airside operations into one airside building to support a heightened level of collaboration and cooperation.

<https://www.youtube.com/watch?v=xS60bqgB8VM>

Property, Plant and Equipment (PPE)

Characteristics:

- Non-current assets used in the operations of a business.
- Have a useful life greater than one accounting period.
- May be classified as Tangible or Intangible.

Property, Plant and Equipment (PPE)

- Also referred to as Fixed Assets.
- Examples: buildings, land, equipment, machinery, leasehold improvements, and vehicles.

Intangible Assets

- Lack physical substance.
- Examples: patents, trademarks, copyrights, leaseholds and drilling rights.

Issues in Accounting for PPE

EXHIBIT 9.1

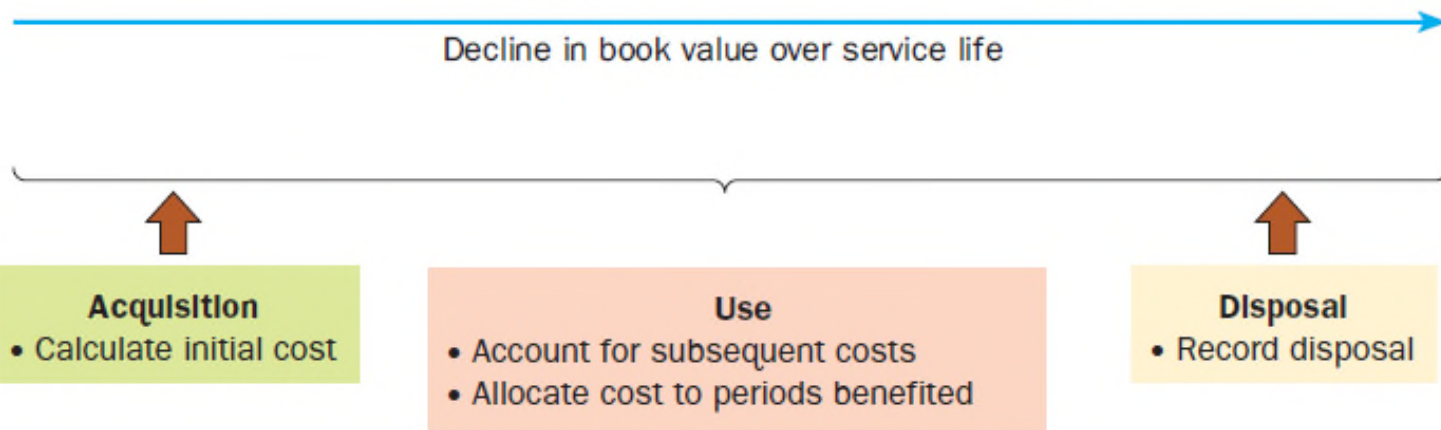

© Paha_/Dreamstime.com/GetStock.com

© 6thgearadvertising/Dreamstime.com/GetStock.com

© Hartphotography/Dreamstime.com/GetStock.com

Cost of PPE

- PPE are recorded at cost, which includes all normal and reasonable expenditures necessary to get the asset in place and ready for its intended use.
- Examples: installation costs, design and engineering, legal and surveying fees.

Capital Expenditures

- Are costs of PPE that provide material benefits extending beyond the current period.
- Are reported on the balance sheet under PPE.

Revenue Expenditures

- Are costs that maintain an asset but do not materially increase the asset's life or productive capabilities.
- Are reported on the income statement as expenses.
- Examples: supplies, lubricants, repair and maintenance costs.

Subsequent Expenditures

- Expenditures that make PPE more efficient or productive and/or extend the useful life of the PPE beyond original expectations.
- Examples: roofing replacement, plant expansion and major overhauls of machinery and equipment.

EXHIBIT 9.2

Land

- Is not subject to depreciation.
- Cost of land includes:
 - Purchase price
 - Legal fees
 - Real estate commissions
 - Accrued property taxes
 - Payments for surveying, grading, draining, and clearing the land
 - Assessments by local governments

Land Improvements

- Assets that increase the usefulness of the land but have a limited life.
- Costs are charged to a separate PPE account.
- Costs are allocated over the period they benefit.
- Cost examples include parking lot surfaces, driveways, fences and lighting systems.

Buildings

- Costs include all expenditures to make the building ready for its intended use.
- Costs are depreciated over the period they benefit.
- Cost examples include purchase price, brokerage fees, taxes, title fees and legal costs.

Leasehold Improvements

- Costs of alterations or improvements to leased property.
- Costs are depreciated over the life of the improvements or the life of the lease, whichever is shorter.
- Examples include interior modifications, flooring, painting and storefronts.

Machinery and Equipment

- Costs include all expenditures normal and necessary to purchase it and prepare it for its intended use.
- Costs are depreciated over the periods they benefit.
- Cost examples include purchase price, less discounts, plus non-refundable sales taxes, transportation charges, insurance while in transit.

Lump-Sum Asset Purchase

- PPE may be purchased in a group with a single transaction for a lump-sum price.
- The cost of the purchase is allocated to the various PPE based on their relative values.

Depreciation

- A process of matching (or allocating) the depreciable cost of an asset in a rational and systematic manner over the asset's estimated useful life.
- Depreciation does not measure the decline in market value of an asset.
- Depreciation begins to be recorded when the asset is put into use.

Depreciation

- PPE help the organization earn revenues over several accounting periods.
- The cost of these PPE are depreciated (spread out) over these same periods.

Depreciation

Factors relevant in determining depreciation:

1. Cost
2. Residual value
3. Useful (service) life

Depreciation Methods

The most commonly used methods are:

1. Straight-line
2. Units-of-production
3. Double-declining balance

Straight-Line Method

The same amount is expensed each period of the asset's useful life.

$$\text{Straight-line depreciation expense} = \frac{\text{Cost} - \text{Estimated residual value}}{\text{Estimated useful life in years}}$$

Straight-Line Method - Illustration

A piece of shoe-production equipment is purchased on January 1, 2017. The relevant data is as follows:

Cost	\$10,000
Estimated residual value	-1,000
Cost to be depreciated	<u>\$9,000</u>

Estimated useful life:

Accounting periods 5 years

Units produced 36,000 shoes

EXHIBIT 9.7

$$\frac{\text{Cost} - \text{Est. Residual value}}{\text{Estimated useful life in years}} = \frac{\text{Total cost to be depreciated}}{\text{Estimated useful life in years}} = \frac{\$10,000 - \$1,000}{5 \text{ years}} = \$1,800 \text{ per year}$$

Straight-Line Method - Illustration

The annual adjusting entry to record depreciation on this equipment would be:

Depreciation Expense	1,800
Accumulated Deprec. -Equipment	1,800

	2017	2018	2019	2020	2021
Equipment	\$10,000	\$10,000	\$10,000	\$10,000	\$10,000
Less: Acc. Deprec.	<u>1,800</u>	<u>3,600</u>	<u>5,400</u>	<u>7,200</u>	<u>9,000</u>
Book Value	\$8,200	\$6,400	\$4,600	\$2,800	\$1,000

Financial Statement Effects of Straight-Line Depreciation

EXHIBIT 9.10

Units-of-Production Method

- This method is employed when the use of an asset varies greatly from one period to the next.
- The amount charged to expense is based on the usage of the asset.

$$\text{Depreciation per unit} = \frac{\text{Cost} - \text{Estimated residual value}}{\text{Total estimated units of production}}$$

$$\text{Annual depreciation expense} = \text{Actual production} \times \text{depreciation per unit}$$

Illustration: Units-of-Production Method

EXHIBIT 9.12

Step 1:

$$\text{Depreciation per unit} = \frac{\text{Cost} - \text{Est. residual value}}{\text{Total est. units}} = \text{Deprec. per unit}$$

$$\begin{aligned} \text{Depreciation per unit} &= \frac{\text{Cost} - \text{Estimated residual value}}{\text{Total estimated units of production}} = \frac{\$10,000 - \$1,000}{36,000 \text{ units}} \\ &= \$0.25 \text{ per shoe} \end{aligned}$$

Step 2:

$$\begin{aligned} \text{Depreciation expense} &= \text{Depreciation per unit} \times \text{Units produced in period} \\ &= \$0.25 \text{ per shoe} \times 7,000 \text{ shoes} = \mathbf{\$1,750} \end{aligned}$$

EXHIBIT 9.13

Period	Depreciation for the Period			End of Period	
	Number of Units	Depreciation Per Unit	Depreciation Expense	Accumulated Depreciation	Book Value
	—	—	—	—	\$10,000*
2017	7,000	\$0.25	\$1,750	\$1,750	8,250
2018	8,000	0.25	2,000	3,750	6,250
2019	9,000	0.25	2,250	6,000	4,000
2020	7,000	0.25	1,750	7,750	2,250
2021	6,000**	0.25	1,250***	9,000	1,000

*Cost on January 1, 2017

**6,000 units were actually produced, but the maximum number of units on which depreciation can be calculated in 2021 is 5,000 [36,000 total estimated units less 31,000 units depreciated to date (7,000 + 8,000 + 9,000 + 7,000)]. Recall that an asset must not be depreciated below its residual value.

***5,000 × \$0.25 = \$1,250

Illustration: Units-of-Production Method – Balance Sheet Presentation

	2017	2018	2019	2020	2021
Equipment	\$10,000	\$10,000	\$10,000	\$10,000	\$10,000
Less: Acc. Deprec.	<u>1,750</u>	<u>3,750</u>	<u>6,000</u>	<u>7,750</u>	<u>9,000</u>
Book Value	\$8,250	\$6,250	\$4,000	\$2,250	\$1,000

Declining-Balance Method

- This method provides higher depreciation expenses in the early years of an asset's life and lower charges in later years.
- A depreciation rate, of up to twice the straight-line rate, is applied to the asset's beginning-of-the period book value.

Double-Declining Balance Method

Steps:

1. Calculate the double-declining balance rate.*
rate(= 2 / Estimated years of useful life)
2. Calculate depreciation expense by multiplying the rate by the asset's beginning-of-period book value.
(depreciation expense = rate x book value)

*Note: Residual value is not used in these calculations.

Illustration: Double-Declining Balance Method

$$\text{Rate} = 2 / 5 \text{ years} \times 100\% = 40\% \text{ per year}$$

EXHIBIT 9.15

Period	Depreciation for the Period		End of Period		
	Beginning-of-Period Book Value	Depreciation Rate	Depreciation Expense	Accumulated Depreciation	Book Value
	—	—	—	—	\$10,000*
2017	\$10,000	40%	\$4,000	\$4,000	6,000
2018	6,000	40	2,400	6,400	3,600
2019	3,600	40	1,440	7,840	2,160
2020	2,160	40	864	8,704	1,296
2021	1,296	40	296**	9,000**	1,000

*Cost on January 1, 2017

**Year 2021 depreciation is \$1,296 – \$1,000 = \$296. This is because maximum accumulated depreciation equals cost minus residual as we depreciate the asset only up to the residual value.

Illustration: Double-Declining Balance Method – Balance Sheet Presentation

	2017	2018	2019	2020	2021
Equipment	\$10,000	\$10,000	\$10,000	\$10,000	\$10,000
Less: Acc. Deprec.	<u>4,000</u>	<u>6,400</u>	<u>7,840</u>	<u>8,704</u>	<u>9,000</u>
Book Value	\$6,000	\$3,600	\$2,160	\$1,296	\$1,000

Comparison of Depreciation Methods

EXHIBIT 9.16

Period	Straight-Line	Units-of-Production		Double-Declining-Balance
	$\frac{\text{Cost} - \text{Est. residual}}{\text{Est. useful life}}$	$\frac{\text{Cost} - \text{Est. residual}}{\text{Total est. units of production}}$	× Actual units produced in period	Book value × $2/n$, where $n = \text{Est. useful life}$
2017	\$ 1,800	\$ 1,750		\$ 4,000
2018	1,800	2,000		2,400
2019	1,800	2,250		1,440
2020	1,800	1,750		864
2021	1,800	1,250		296
	<u>\$ 9,000</u>	<u>\$ 9,000</u>		<u>\$ 9,000</u>

Graphic Comparison of Depreciation Methods

EXHIBIT 9.17 **Graphic Comparison of Depreciation Methods**

Partial-Year Depreciation

- Assets may be purchased or disposed of at any time during the year.
- Depreciation for a partial year is recorded when the purchase or disposal is made at a time other than the beginning or end of the accounting period.

Depreciation for Income Tax Reporting

- The Income Tax Act requires that companies use a declining–balance method called Capital Cost Allowance (CCA) for business tax reporting purposes.
- The Income Tax Act specifies the CCA rates for various groups of assets.

Partial-Year Depreciation

Methods:

1. Nearest whole month

- If the asset was in use for more than half of the month, depreciation is calculated for the whole month.
- If the asset was in use for less than half of the month, depreciation is not calculated for the month.

2. Half-year convention

- Six months' depreciation is recorded regardless when an asset is acquired or disposed of.

Mini-Quiz

Gamma Company purchased a computer costing \$4,000 on April 18. It is expected to last for three years and then sell for \$400.

Calculate depreciation* for the first year using the:

1. Straight-line method.
2. Double declining balance method.

**Use the nearest whole month method.*

Mini-Quiz

Gamma Company purchased a computer costing \$4,000 on April 18. It is expected to last for three years and then sell for \$400.

$$\begin{aligned} \text{Straight-line depreciation expense} &= \frac{\text{Cost} - \text{Estimated residual value}}{\text{Estimated useful life in years}} \times \text{Portion of year} \\ &= \frac{\$4,000 - \$400}{3 \text{ years}} \times 8/12 \text{ year} \\ &= \$800 \end{aligned}$$

Mini-Quiz

Gamma Company purchased a computer costing \$4,000 on April 18. It is expected to last for three years and then sell for \$400.

$$\begin{array}{l} \text{DDB} \\ \text{depreciation} \\ \text{expense} \end{array} = \text{DDB rate} \times \text{Cost} \times \text{Portion of year}$$

$$= (2 \times 1/3) \times \$4,000 \times 8/12$$

$$= \$1,778 \text{ (rounded)}$$

Revising Depreciation Rates

Depreciation rates for current and future periods may be revised if there is a change in an asset's:

1. Estimated residual value and/or useful life.

or

2. Cost due to subsequent capital expenditures.

Changes in Estimated Residual Value and/or Estimated Useful Life

- The undepreciated cost of the asset is depreciated (allocated) over the remaining life of the asset.
- This is considered to be a **change in an accounting estimate** and not an error.

Changes in Estimated Residual Value and/or Estimated Useful Life

Example: Straight-line Method

$$\begin{array}{l} \text{Revised} \\ \text{depreciation} \\ \text{for} \\ \text{remaining} \\ \text{years} \end{array} = \frac{\begin{array}{l} \text{Remaining} \\ \text{book value} \end{array} - \begin{array}{l} \text{Revised residual} \\ \text{value} \end{array}}{\text{Revised remaining useful life}}$$

Revising Depreciation Rates When There is a Subsequent Capital Expenditure

- Subsequent capital expenditures cause the cost of an asset to change.
- These expenditures can be the addition of a component to an existing asset or the replacement or overhaul of a component.

Revising Depreciation Rates When There is a Subsequent Capital Expenditure

- Revised depreciation is calculated to reflect the new cost and/or changes in estimated life/residual value.
- When a subsequent expenditure results in a replacement of a component, the cost and accumulated depreciation of the component must be removed and a gain or loss is recorded.

Impairment of PPE Assets

- An impairment loss occurs when the book value of PPE is greater than the amount to be recovered through the asset's use or sale.
- Impairments may result from:
 - A significant decline in the market value of the asset.
 - Technological, economic, or legal factors.

Impairment of PPE Assets

If an impairment loss occurs:

- The loss is recorded.
- Depreciation is revised for future periods.

Disposal of Capital Assets

Capital assets may be disposed of for a variety of reasons such as:

1. Obsolescence
2. Wear and tear
3. Damage
4. Changing business plans

Disposal of PPE

Accounting for disposal involves:

1. Record depreciation up to date of disposal.
2. Compare the asset's book value with the net amount received/paid at disposal and record any resulting gain/loss.
3. Remove the balances of the disposed asset and related accumulated depreciation accounts.
4. Record any cash (and other assets) received or paid in the disposal.

Exchanging PPE

Accounting for exchange involves:

1. Record depreciation up to date of exchange.
2. Compare the asset's book value with the net amount received/paid on exchange and record any resulting gain/loss.
3. Remove the balances of the exchanged asset and related accumulated depreciation accounts.
4. Record the new asset and cash received or paid in the exchange.

Intangible Assets

- Have no physical substance.
- Are used in operations.
- Provide future economic benefits.
- Are recorded at cost when purchased.
- Examples include patents, copyrights, trademarks, drilling rights, trademarks and trade names, and leaseholds.

Intangible Assets

- Are recorded at cost when purchased.
- Cost is amortized* over estimated useful life.
- The straight-line method is usually used.
- Are shown on the balance sheet separately from PPE.
- * *Amortization is the systematic allocation of the cost of an intangible asset over its useful life*

Goodwill

The amount by which the price paid for a company exceeds the fair market value of the company's net assets if purchased separately.

Goodwill

- Is not an intangible asset.
- Is reported separately on the balance sheet.
- Is not amortized but may be decreased if it is impaired.

Review

Explain the difference between revenue and capital expenditures and how they are recorded in the accounting system.

- Revenue expenditures such as ordinary repairs expire in the current accounting period. They are debited to expense and are thus matched with current revenues.
- Capital expenditures provide material benefits extending beyond the current period. They are debited to PPE accounts and are matched with future periods through depreciation expense.
- Immaterial long-term expenditures are treated as current period expenses.

Revised Depreciation When There Is a Subsequent Capital Expenditure That Creates Partial Period Depreciation- Appendix 9A

Steps in Revising Depreciation:

1. Depreciation is updated to the date of the subsequent capital expenditure.
2. Record the subsequent capital expenditure and remove the component being replaced
3. Calculate and record the revised depreciation on the capital asset.

Summary – Chapter 9

1. Describe property, plant and equipment (PPE) and calculate their cost.
2. Explain, record, and calculate depreciation using the methods of straight-line, units of production, and double-declining balance.
3. Explain and calculate depreciation for partial years.

Summary – Chapter 9

4. Explain and calculate revised depreciation.
5. Explain and record impairment losses.
6. Account for asset disposal through discarding, selling, or exchanging an asset.
7. Account for intangible assets and their amortization.

Summary – Chapter 9

- Explain and calculate revised depreciation when there is a subsequent capital expenditure that creates partial period depreciation. Appendix 9A

End of Chapter
