## Provide an appropriate response.

69) The following graph shows the number of car accidents occurring in one city in each of the years 2006 through 2011 (Year $1=2006$, Year $2=2007$ etc). The number of accidents dropped in 2008 after a new speed limit was imposed. How is the bar graph misleading? How would you redesign the graph to be less misleading?

Answer: The bar graph is misleading because the vertical axis starts at 60 instead of 0 . This tends to indicate that the number of accidents decreased at a faster rate than they actually did. The graph would be less misleading if the vertical scale began at 0 or if a symbol were used to clearly indicate that the vertical scale is truncated and has a gap.
