74. Explain calculated columns.

ANSWER:	After you enter a single formula into a table cell, this feature fills in the remaining cells with the formula's results. The column continues to fill with the formula results as you enter rows in the table. This makes it easy to update your formulas because you only need to edit the formula once, and the change will fill in to the other column cells.

75. Explain the structured reference feature in Excel. Give an example.

ANSWER:	This feature allows your formulas to refer to table columns by names that are automatically generated when you create the table. These names automatically adjust as you add or delete table fields. An example of a table reference is =[Sales] - [Costs], where Sales and Costs are field names in the table.
