

2

EXERCISE

Organ Systems Overview

Time Allotment: 1½ hours (rat dissection—1 hour; human torso model—½ hour).

Multimedia Resources: See Appendix B for a list of multimedia resource distributors.

Homeostasis (FHS: 20 minutes, DVD, 3-year streaming webcast)

Homeostasis: The Body in Balance (HRM, IM, 26 minutes, DVD)

Advance Preparation

1. Make arrangements for appropriate storage and disposal of dissection materials. Check with the Department of Health or the Department of Environmental Protection, or their counterparts, for state regulations.
2. Designate a disposal container for organic debris, set up a dishwashing area with hot soapy water and sponges, and provide lab disinfectant such as Wavicide-01 (Carolina) for washing down the lab benches.
3. Set out safety glasses and disposable gloves for dissection of freshly killed animals (to protect students from parasites) and for dissection of preserved animals.
4. Decide on the number of students in each dissecting group (a maximum of four is suggested; two is probably best). Each dissecting group should have a dissecting pan, dissecting pins, scissors, blunt probe, forceps, twine, and a preserved or freshly killed rat.
5. Preserved rats are more convenient to use unless small mammal facilities are available. If live rats are used, they may be killed a half hour or so prior to the lab by administering an overdose of ether or chloroform. To do this, remove each rat from its cage and hold it firmly by the skin at the back of its neck. Put the rat in a container with cotton soaked in ether or chloroform. Seal the jar tightly and wait until the rat ceases to breathe.
6. Set out human torso models and a predissected rat.

Comments and Pitfalls

1. Students may be overly enthusiastic when using the scalpel and cut away organs they are supposed to locate and identify. Have blunt probes available as the major dissecting tool and suggest that the scalpel be used to cut only when everyone in the group agrees that the cut is correct.
2. Be sure the lab is well ventilated, and encourage students to take fresh air breaks if the preservative fumes are strong. If the dissection animal will be used only once, it can be rinsed to remove most of the excess preservative.
3. Organic debris may end up in the sinks, clogging the drains. Remind the students to dispose of all dissection materials in the designated container.

Answers to Activity Questions

Activity 6: Examining the Human Torso Model (pp. 15–16)

Digestive: *esophagus, liver, stomach, pancreas, small intestine, large intestine (including rectum), gallbladder*

Urinary: *kidneys, ureters, bladder*

Cardiovascular: *heart, descending aorta, inferior vena cava*

Endocrine: *thyroid gland, pancreas, adrenal gland*

Reproductive: *uterus*

Respiratory: *lungs, bronchi, trachea, diaphragm*

Lymphatic: *spleen*

Nervous: *brain, spinal cord, medulla of adrenal gland*

2

EXERCISE

Name _____

Lab Time/Date _____

Organ Systems Overview

1. Using the key choices, indicate the body systems that match the following descriptions. Then, circle the organ systems (in the key) that are present in all subdivisions of the ventral body cavity.

Key: cardiovascular integumentary nervous skeletal
 digestive lymphatic reproductive urinary
 endocrine muscular respiratory

- urinary _____ 1. rids the body of nitrogen-containing wastes
endocrine _____ 2. is affected by removal of the adrenal gland
skeletal _____ 3. protects and supports body organs; provides a framework for muscular action
cardiovascular _____ 4. includes arteries and veins
endocrine _____ 5. composed of glands that secrete hormones
integumentary _____ 6. external body covering
lymphatic _____ 7. houses cells involved in the body's immune response
digestive _____ 8. breaks down ingested food into its absorbable units
respiratory _____ 9. loads oxygen into the blood
cardiovascular/endocrine _____ 10. uses blood as a transport vehicle
muscular _____ 11. generates body heat and provides for locomotion of the body as a whole
urinary _____ 12. regulates water and acid-base balance of the blood
reproductive _____ and endocrine _____ 13. necessary for conception and childbearing
integumentary _____ 14. is damaged when you fall and scrape your knee

2. Using the above key, choose the *organ system* to which each of the following sets of organs or body structures belongs:

- lymphatic _____ 1. lymph nodes, spleen, lymphatic vessels respiratory _____ 4. trachea, bronchi, alveoli
skeletal _____ 2. bones, cartilages, ligaments reproductive _____ 5. uterus, ovaries, vagina
endocrine _____ 3. thyroid, thymus, pituitary gland cardiovascular _____ 6. arteries, veins, heart

3. Using the key below, place the following organs in their proper body cavity. Some responses may be used more than once.

Key: abdominopelvic cranial spinal thoracic

- | | |
|------------------------------------------|------------------------------------------|
| <u>abdominopelvic</u> 1. stomach | <u>abdominopelvic</u> 6. urinary bladder |
| <u>thoracic</u> 2. esophagus | <u>thoracic</u> 7. heart |
| <u>abdominopelvic</u> 3. large intestine | <u>thoracic</u> 8. trachea |
| <u>abdominopelvic</u> 4. liver | <u>cranial</u> 9. brain |
| <u>spinal</u> 5. spinal cord | <u>abdominopelvic</u> 10. rectum |

4. Using the organs listed in item 3 above, record, by number, which would be found in the following abdominopelvic regions:

- | | |
|---------------------------------------|------------------------------------------|
| <u>3, 6, 10</u> 1. hypogastric region | <u>1, 3, 4</u> 4. epigastric region |
| <u>3</u> 2. right lumbar region | <u>3</u> 5. left iliac region |
| <u>3</u> 3. umbilical region | <u>1, 3</u> 6. left hypochondriac region |

5. The five levels of organization of a living body, beginning with the cell, are as follows: cell, tissue, organ, organ system, and organism.

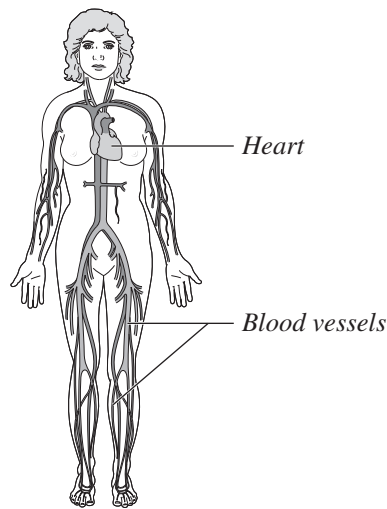

6. Define *organ*: A structure composed of two or more tissues that performs a specialized function

7. Using the terms provided, correctly identify all of the body organs provided with leader lines in the drawings below. Then name the organ systems by entering the name of each on the answer blank below each drawing.

Key: blood vessels heart nerves spinal cord urethra
 brain kidney sensory receptor ureter urinary bladder

1. Nervous

2. Cardiovascular

3. Urinary
