Chapter 2 Thinking Like an Economist

MULTIPLE CHOICE

- 1. Which of the following is *not* correct?
 - a. Economists use some familiar words in specialized ways.
 - b. Economics has its own language and its own way of thinking, but few other fields of study do.
 - c. Supply, demand, elasticity, comparative advantage, consumer surplus, and deadweight loss are all terms that are part of the economist's language.
 - d. The value of the economist's language lies in its ability to provide you with a new and useful way of thinking about the world in which you live.

- 152. Suppose an economy produces two goods, food and machines. This economy always operates on its production possibilities frontier. Last year, it produced 1000 units of food and 47 machines. This year it experienced a technological advance in its machine-making industry. As a result, this year the society wants to produce 1050 units of food and 47 machines. Which of the following statements is correct?
 - Because the technological advance occurred in the machine-making industry, it will not be possible to increase food production without reducing machine production below 47.
 - Because the technological advance occurred in the machine-making industry, increases in output can only occur in the machine industry.
 - In order to increase food production in these circumstances without reducing machine production, the economy must reduce inefficiencies.
 - d. The technological advance reduced the amount of resources needed to produce 47 machines, so these resources could be used to produce more food.

TOP: Economists MSC: Definitional

LET'S GET GOING

- 1. John Maynard Keynes referred to economics as an easy subject,
 - a. at which very few excel.
 - b. but not as easy as philosophy or the pure sciences.
 - c. which very few can enjoy.
 - d. which deals primarily with common sense.

ANS: A PTS: DIF: REF: 2-4 - 1 1 LOC: The study of economics and definitions in economics NAT: Analytic

MSC: Definitional TOP: Economists

- 2. How did the influential economist John Maynard Keynes explain his remark that though economics is an easy subject compared with the higher branches of philosophy or pure science, it is a subject at which few excel?
 - a. Most people who study economics are not very bright.
 - Good economists must possess a rare combination of gifts.
 - Economics is quite boring; hence, people tend to lose interest in it before mastering it.
 - Good thinkers become frustrated with economics because it does not make use of the scientific method.

ANS: B PTS: DIF: 2 REF: 2-4 LOC: The study of economics and definitions in economics NAT: Analytic TOP: Economists MSC: Interpretive

- 3. According to economist John Maynard Keynes, a great economist must also be a(n)
 - a. mathematician.
 - b. historian.
 - philosopher. c.
 - d. All of the above are correct.

ANS: D PTS: DIF: 1 REF: 2-4 NAT: Analytic LOC: The study of economics and definitions in economics

TOP: Economists MSC: Interpretive

- 4. The 1990 amendment to the Clean Air Act
 - a. banned all forms of pollution.
 - b. implemented tradable allowances for acid rain.
 - created a research council on asthma.
 - d. made global warming a national priority.

ANS: B PTS: DIF: REF: 2-4 NAT: Analytic LOC: The study of economics and definitions in economics

TOP: Environmental Economics MSC: Definitional

- 5. Economists have helped modify the debate over the environment
 - by pointing out that nature is invaluable.
 - b. by focusing discussion on issues of resource allocation.
 - c. by lobbying Congress for acid rain legislation.
 - d. by arguing against tradeable permits for pollution.

ANS: B PTS: DIF: REF: 2-4 NAT: Analytic LOC: The study of economics and definitions in economics

TOP: Environmental Economics MSC: Definitional

- 6. In the past, environmentalists thought of economics as a method of maximizing profits. Presently,
 - a. there is now realization that economics offers a framework for natural resource allocation.
 - b. economists are helping to formulate the intellectual framework behind approaches to protecting endangered species, reducing pollution, and preventing climate change.
 - c. economics informs environmental studies but economists still do not work for environmental advocacy groups.
 - d. More than one of the above is correct.

ANS: D PTS: 1 DIF: 2 REF: 2-4 NAT: Analytic LOC: The study of economics and definitions in economics

TOP: Environmental Economics MSC: Interpretive

GRAPHING: A BRIEF REVIEW

- 1. Which of the following is *not* correct?
 - a. When developing economic theories, graphs offer a way to visually express ideas that might be less clear if described with equations or words.
 - b. Graphs are one way of expressing the relationships among variables.
 - c. When studying the relationship between two economic variables, graphs allow economists to draw indisputable conclusions about causes and effects.
 - d. When analyzing economic data, graphs provide a powerful way of finding and interpreting patterns.

ANS: C PTS: 1 DIF: 2 REF: 2-5
NAT: Analytic LOC: The study of economics and definitions in economics
TOP: Graphs MSC: Interpretive

- 2. Which of the following is *not* an example of a graph of a single variable?
 - a. a pie chart
 - b. a bar graph
 - c. a time-series graph
 - d. a scatterplot

ANS: D PTS: 1 DIF: 2 REF: 2-5
NAT: Analytic LOC: The study of economics and definitions in economics

- TOP: Graphs MSC: Interpretive
 - 3. Graphs such as bar graphs and pie charts are limited in that they
 - a. can only show variables that are positively related.
 - b. can only show variables that have a negative correlation.
 - c. provide information on only one variable.

manded by customers. He should use a(n)

d. provide information on no more than two variables.

- 2. The prairie dog has always been considered a problem for American cattle ranchers. They dig holes that cattle and horses can step in, and they eat grass necessary for cattle. Recently, ranchers have discovered that there is a demand for prairie dogs as pets. In some areas, prairie dogs can sell for as high as \$150 each. Cattlemen are now fencing off prairie dog towns on their land so these towns will not be disturbed by their cattle. Draw a rancher's production possibilities frontier showing increasing opportunity cost of cattle production in terms of prairie dog production. Using a separate graph for each situation, show what would happen to the initial production possibilities frontier in each of the following situations:
 - The outcome is efficient, with ranchers choosing to produce equal numbers of cattle and prairie dogs.
 - b. As a protest against the government introducing the gray wolf back into the wild in their state, ranchers decide to withhold 25 percent of the available grassland for grazing.
 - c. The price of prairie dogs increases to \$200 each, so ranchers decide to allot additional land for prairie dogs.
 - d. The government grants new leases to ranchers, giving them 10,000 new acres of grassland each for grazing.
 - e. A drought destroys most of the available grass for grazing of cattle, but not for prairie dogs since they also eat plant roots.

- 5. Which of the following statements are positive and which are normative?
 - The minimum wage creates unemployment among young and unskilled workers.
 - The minimum wage ought to be abolished.
 - If the price of a product in a market decreases, then, other things equal, quantity demanded will increase. c.
 - A little bit of inflation is worse for society than a little bit of unemployment.
 - There is a tradeoff between inflation and unemployment in the short run.
 - If consumer income increases, then, other things equal, the demand for automobiles will increase.
 - The U.S. income distribution is not fair.
 - U.S. workers deserve more liberal unemployment benefits.
 - i. If interest rates increase, then investment will decrease.
 - If welfare benefits were reduced, then the country would be better off. į.

ANS:

a, c, e, f, and i are positive statements. b, d, g, h, and j are normative statements.

- 6. Use the following graph to answer the following questions.
 - How would point J be represented as an ordered pair?
 - b. What type of curve is this?
 - Does this curve show a positive or negative correlation between price and quantity?
 - Compute the slope of D_1 between points J and L.
 - What is the slope of D_1 between points L and N? Why would you not have to calculate this e. answer?
 - What is it called if we move from D_1 to D_2 ? f.
 - How do you know that the slope of D_2 is the same as the slope of D_1 ?

ANS:

- (20,24)
- a demand curve b.
- a negative correlation between price and quantity c.
- d. -8/20 or -2/5
- -2/5; because the slope of a straight line is constant e.
- f. an increase in demand.
- because the 2 lines are parallel g.
