

Chapter 2

Property Acquisition and Cost Recovery

SOLUTIONS MANUAL

Discussion Questions

- [LO 1] Explain the reasoning why the tax laws require the cost of certain assets to be capitalized and recovered over time rather than immediately expensed.

Assets with an expected life of more than one year must be capitalized and recovered through depreciation, amortization, or depletion deductions—depending on the type of underlying asset. The policy attempts to match the revenues and expenses for these assets because the assets have a useful life of more than one year.

- [LO 1] Explain the differences and similarities between personal property, real property, intangible property, and natural resources. Also, provide an example of each type of asset.

Personal property, real property, and natural resources are all tangible property that can be seen and touched. Natural resources are assets that occur naturally (e.g. timber or coal). Real property is land and all property that is attached to land (e.g. buildings). Personal property is all tangible property that is not a natural resource or real property. Intangibles are all intellectual property rights (e.g. patents and copyrights) and any other value not assigned as a tangible asset during a purchase (e.g. goodwill). Each of these has an expected useful life of more than one year.

Asset Type	Examples
Personal property	Automobiles, equipment, furniture, and machinery
Real property	Land and items attached to land such as buildings (warehouse, office building, and residential dwellings)
Intangibles	Start-up and organizational costs, copyrights, patents, covenants not to compete and goodwill
Natural Resources	Commodities such as oil, coal, copper, timber, and gold

- [LO 1] Explain the similarities and dissimilarities between depreciation, amortization, and depletion. Describe the cost recovery method used for each of the four asset types (personal property, real property, intangible property, and natural resources).

There are three types of cost recovery: depreciation, amortization, and depletion. Each is similar in that they recover the cost basis of long-lived assets. Depreciation for real property, amortization, and cost depletion are on a straight-line basis. (Taxpayers may elect straight-line on tangible personal property as well.) The primary difference is that they are used for property with unique characteristics. Depreciation of tangible personal property is done on an accelerated (most often double-declining balance) method. Percentage depletion assigns a statutory rate that may recover more than the original cost of the asset.

Asset Type	Cost Recovery Type, Characteristics
Personal property	MACRS depreciation, characterized by double declining balance method (although 150% DB or straight-line may be elected), half-year convention (although mid-quarter may be required), and shorter recovery periods.
Real property	MACRS depreciation, characterized by straight-line method, mid-month convention, and longer recovery periods.
Intangibles	Amortization, characterized by straight-line method, full-month convention, various recovery periods (usually not based on actual life) depending on intangible type.
Natural Resources	Depletion (cost or percentage), cost depletion allocates the cost of a natural resource based on resource estimates (tons, ounces, barrels, etc.), straight-line method, based on actual extraction quantities, percentage depletion allocates a statutory expense (depending on resource type) based on gross income, but limited to 50% of net income, and is the only cost recovery method that allows a taxpayer to recover more than the original basis of an asset.

4. [LO 1] Is an asset's initial or cost basis simply its purchase price? Explain.

The initial basis of any purchased business asset is historical cost. This is generally the purchase price, plus any other expenses (e.g. sales tax and installation costs) incurred to get the asset in working condition. This does not include costs which substantially improve or extend the life of an asset such as a building addition.

5. [LO 1] Compare and contrast the basis of property acquired via purchase, conversion from personal use to business or rental use, a nontaxable exchange, gift, and inheritance.

The basis of purchased assets is historical cost. The basis rules for other acquisitions depend on whether the transaction was taxable or not. For taxable transactions there is usually a step-up in basis to fair market value. For non-taxable transactions, there is usually a carryover basis. Conversion of assets from personal use gets the lesser of the two values. The specific rules are as follows:

Acquisition Type	Basis Rules
Purchase	The initial basis is historical cost plus all costs incurred to get the asset to its destination and in working order.
Conversion from personal use	The depreciable basis would be the lesser of the fair market value of the asset on the date of conversion or the adjusted basis of the transferor.
Non-taxable exchange	The basis is a carryover basis of the transferor since there is no recognition of gain or loss on the transfer (not a taxable transaction).
Gift	The basis is generally a carryover basis, because these transactions usually aren't taxable. If gift tax is paid, the basis may be increased by a portion of the gift tax paid.
Inheritance	The basis is the fair market value on the date of death or the alternate valuation date six months later (if elected by the estate). The fair market value is used because the transfer arises from a taxable transaction.

6. [LO 1] Explain why the expenses incurred to get an asset in place and operable should be included in the asset's basis.

Additional expenses, including sales tax, shipping, installation costs, and the like are capitalized into an asset's basis because all costs required to place an asset into service are required to be included into its basis. That is, without these costs, the taxpayer would not be able to place in service or use the asset in a business.

7. [LO 1] Graber Corporation runs a long-haul trucking business. Graber incurs the following expenses: replacement tires, oil changes, and a transmission overhaul. Which of these expenditures may be deducted currently and which must be capitalized? Explain.

An expense that extends the useful life of an asset will be capitalized as a new asset—depreciated over the same MACRS recovery period of the original asset rather than the remaining life of the existing asset. Alternatively, expenses that constitute routine maintenance should be expensed immediately. An engine overhaul is likely to be a capitalized

expense. Tires and oil changes are likely to be expensed currently. However, all expenses are subject to a facts and circumstances test.

8. [LO 2] MACRS depreciation requires the use of a recovery period, method, and convention to depreciate tangible personal property assets. Briefly explain why each is important to the calculation.

MACRS depreciation calculations are straightforward once you know the recovery period (life), method, and convention for the asset. Recovery period is the statutory life or the period over which a taxpayer will allocate the depreciation expense. Profitable taxpayers prefer the recovery period to be as short as possible so that they may recoup the basis as quickly as possible. The method is generally the double-declining (200% DB) method. However, taxpayers may elect to use either the 150% DB method (useful if they are subject to AMT, to avoid calculating both regular and AMT depreciation) or straight-line method (to lengthen depreciation expense for taxpayers in an expiring NOL situation). The convention determines how much depreciation is taken in both the year of acquisition and the year of disposition. The half-year convention is used to simplify calculating depreciation based on the number of days an asset was owned during the year, but the mid-quarter convention is required if more than 40% of the tangible personal property placed in service during the year was placed in service during the fourth quarter.

9. [LO 2] Can a taxpayer with very little current year income choose to not claim any depreciation expense for the current year and thus save depreciation deductions for the future when the taxpayer expects to be more profitable?

Taxpayers must reduce the basis of depreciable property by the depreciation allowed or allowable (§1011). Therefore, taxpayers must reduce their basis whether or not they claim the depreciation expense. As a result, taxpayers are better off taking the depreciation expense even if it creates a net operating loss or is taxed at a relatively low marginal tax rate.

10. [LO 2] [Planning] What depreciation methods are available for tangible personal property? Explain the characteristics of a business likely to adopt each method.

Taxpayers may elect to use the 200% DB, 150% DB, or the straight-line method for tangible personal property. It is important to note that all three methods allow the same depreciation expense over the same recovery period. Nevertheless, profitable taxpayers will elect to use the 200% DB method because it minimizes the after-tax cost of the asset by maximizing the present value of the depreciation expenses—through accelerating the depreciation expenses. Taxpayers traditionally subject to the AMT may elect to use the 150% DB method because it saves them the administrative inconvenience of calculating depreciation under both methods when the resulting expense

under the 150% DB method required by AMT. Taxpayers may elect to use the straight-line method if they want to slow down depreciation expense—which is counterintuitive but often occurs for companies that regularly incur NOLs and would like to preserve these losses for a time when they expect profitability or will be acquired by another taxpayer that may be able to utilize the NOLs.

11. [LO 2] If a business places several different assets in service during the year, must it use the same depreciation method for all assets? If not, what restrictions apply to the business's choices of depreciation methods?

Taxpayers may generally choose the depreciation method used for assets placed in service. The MACRS general depreciation system generally uses the 200% DB method for tangible personal property and the straight line method for real property. However, taxpayers may elect either the 150% DB or straight-line method for tangible personal property on an asset class by asset class basis (§168(g)(7)). For example, if a taxpayer places in service a computer (5-year property), a delivery truck (5-year property), and machinery (7-year property) an election could be made to use the straight-line method for all 5 year property and continue to use the 200% DB method for the 7-year property. Alternatively, an election could be made to use the straight line method for only the 7-year property or all tangible personal property placed in service during the year. Once made, the method choice is an accounting method election and is irrevocable.

12. [LO 2] Describe how you would determine the MACRS recovery period for an asset if you did not already know it.

Rev. Proc. 87-56 is the definitive authority for determining the recovery period of all assets under MACRS. This guidance divides assets into asset classes (groups of similar property) upon which the recovery period is determined as the midpoint of the asset depreciation range (ADR) (the system developed by the IRS for pre-ACRS property). However, the "87" in the citation indicates that the Rev. Proc. was issued in 1987. As a result, taxpayers, or their advisors, must verify that the guidance is still valid. For example, qualified restaurant property, qualified leasehold improvement property, and qualified Alaska natural gas pipeline are examples of assets to which Congress has given preferential recovery periods since 1987.

13. [LO 2] [Research] Compare and contrast the recovery periods used by MACRS and those used under generally accepted accounting principles (GAAP).

Rev. Proc. 87-56 is the definitive authority for determining the recovery period of all assets under MACRS. However, Congress in §168 has recently modified the recovery period of some assets. Financial accounting rules are vague at best. FASB Concept Statement 5 indicates that assets should be

recognized over the accounting period of their life. FASB Concept Statement 6 defines an asset as a probable future benefit. ARB 43 indicates that the cost should be spread over the assets useful life in a systematic and rational manner. APB 12 requires companies, through financial statement disclosure, to disclose to investors current depreciation expense, depreciation method, and recovery period used for assets. As a result, companies could use any rational recovery period for financial accounting purposes.

14. [LO 2] What are the two depreciation conventions that apply to tangible personal property under MACRS? Explain why Congress provides two methods.

The two depreciation conventions that apply to tangible personal property under MACRS are the half-year convention and the mid-quarter convention. MACRS uses a simplifying half-year convention. The half-year convention allows one-half of a full year's depreciation in the year the asset is placed in service, regardless of when it was actually placed in service. For example, when the half-year convention applies, an asset placed in service on either January 30 or December 17 is treated as though it was placed in service on July 1 which is the middle of the calendar year. The original ACRS system included only the half-year convention; however, Congress felt that some taxpayers were abusing the system by purposely acquiring assets at the end of the year that they otherwise would have acquired at the beginning of the next taxable year (allowable tax planning under ACRS). In 1987, as part of MACRS, the mid-quarter convention was implemented. The mid-quarter convention treats assets as though they were placed in service during the middle of the quarter in which the business actually placed the asset into service. For example, when the mid-quarter convention applies, if a business places an asset in service on December 1 (in the fourth quarter) it must treat the asset as though it was placed in service on November 15, which is the middle of the fourth quarter.

15. [LO 2] A business buys two identical tangible personal property assets for the same identical price. It buys one at the beginning of the year and one at the end of year. Under what conditions would the taxpayer's depreciation on each asset be exactly the same? Under what conditions would it be different?

MACRS has two conventions: half-year and mid-quarter conventions. The half-year convention is the general rule and simplifies the depreciation process by allowing one half year of depreciation taken on all assets placed in service during the year. The mid-quarter convention is required if more than 40% of a taxpayer's tangible personal property is placed in service during the fourth quarter of the year. The depreciation on the two assets would be the same if the taxpayer was using the half-year convention—which would apply if the taxpayer purchased and placed in service other assets

during the year so that the 40% placed in service fourth quarter test is failed. The depreciation on the two assets would be different if the two assets were the only assets placed in service during the year—so that 50% was placed in service during the 4th quarter and the mid-quarter convention was required to be used.

16. [LO 2] AAA, Inc., acquired a machine in year 1. In May of year 3, it sold the asset. Can AAA find its year 3 depreciation percentage for the machine on the MACRS table? If not, what adjustment must AAA make to its full year depreciation percentage to determine its year 3 depreciation?

The applicable depreciation convention applies in the year of disposal as well as the year of acquisition. The MACRS tables cannot anticipate an assets disposal and therefore assume the asset was used in a trade or business for the entire year. As a result, AAA must apply the applicable convention to the table percentage upon disposal to arrive at the correct percentage. If the half-year convention applies, then multiplying the MARCRS table full year depreciation by 50% (one-half of a year's depreciation) will help you arrive at the correct percentage. Alternatively, if the mid-quarter convention applies, the asset is treated as though it is sold in the middle of the quarter of which it was actually sold. The simplest process for calculating mid-quarter convention depreciation for the year of sale is to use the following four step approach: (1) determine the amount of depreciation expense for the asset as if the asset were held for the entire year; (2) subtract one-half of a quarter from the quarter in which the asset was sold (if sold in 3rd quarter subtract .5 from 3 to get 2.5); (3) divide the outcome from Step 2 by 4 (quarters) (2.5/4) this is the fraction of the full year's depreciation the taxpayer is eligible to deduct, and (4) multiply the Step (3) outcome by the full depreciation determined in Step (1).

17. [LO 2] There are two recovery period classifications for real property. What reasons might Congress have to allow residential real estate a shorter recovery period than nonresidential real property?

Non-residential property currently has a recovery period of 39 years while residential property has a recovery period of 27.5 years. Non-residential has longer lives because the construction methods are more substantial which results in longer lives. For example, non-residential often uses steel frame with concrete and/or block floors and walls. In contrast, residential uses balloon construction using 2x4 timbers for structure. The non-residential components often are built with more substantial materials as well. Some argue that residential property receives higher use percentages and is subject to more wear and tear.

18. [LO 2] Discuss why Congress has instructed taxpayers that real property be depreciated using the mid-month convention as opposed to the half-year or mid-quarter conventions used for tangible personal property.

The purpose of MACRS conventions is to simplify the calculation of depreciation. Real property is characterized by higher basis and less frequent acquisition than tangible personal property. These two reasons suggest that mid-month convention approximates actual wear and tear on real property better than the half-year and mid-quarter conventions would. For example, if a building was purchased in January or December it would be entitled to 11.5 or .5 months, respectively, of depreciation under the mid-month convention--which is close to the actual time the asset was placed in service. This contrasts with the half-year convention that would allow 6 months or the mid-quarter convention that would allow 10.5 or 1.5 months, respectively, of depreciation.

19. [LO 2] [Research] If a taxpayer has owned a building for 10 years and decides that it should make significant improvements to the building, what is the recovery period for the improvements?

MACRS generally classifies additions to property as a new asset placed in service subject to the same depreciable life as the original asset. For example, if a \$2,000,000 addition is made to an office building (non-residential property) then the asset's basis is \$2,000,000 and its recovery period is 39 years. However, if the improvements are in the form of minor repairs that simply maintain the integrity of the structure they would be expensed. A third alternative is that all or a portion of the improvements could represent non-structural components (such as leasehold improvements) of the non-residential property and, therefore, qualify as tangible personal property which is generally subject to accelerated methods and shorter recovery periods.

20. [LO 2] Compare and contrast the differences between computing depreciation expense for tangible personal property and depreciation expense for real property under both the regular tax and alternative tax systems.

MACRS allows the 200% DB method to be used whereas AMT requires the 150% DB method to be used for tangible personal property. Both MACRS and AMT require the straight-line method for real property. Therefore, the AMT adjustment for tangible personal property is the difference between depreciation calculated under the 200% DB and the 150% DB methods. There is no AMT adjustment required for real property. For taxpayers that elect either the 150% DB or straight-line method for tangible personal property there is no AMT adjustment required with respect to that property.

21. [LO 3] Discuss why a small business might be able to deduct a greater percentage of the assets it places in service during the year than a larger business.

The tax law allows for expensing of tangible personal property for certain businesses. The deduction is phased out for taxpayers that place more than a certain amount of property in service during the year. Since most large businesses place more than the limit of property in service, they are ineligible for the §179 deduction.

22. [LO 3] Explain the two limitations placed on the §179 deduction. How are they similar? How are they different?

The §179 deduction has two limitations: the property placed in service and the taxable income limitation. The property placed in service limitation phases out the maximum deduction amount dollar for dollar for property placed in service over the \$2,000,000 limit (limit in 2013, which we assume will be extended to 2014). After being limited by the property placed in service limitation, the §179 deduction is further limited to the taxpayer's taxable income after regular MACRS depreciation but before deducting any §179 expense. The two limitations are similar in that they both limit the §179 deduction. However, the first limitation was designed to limit the amount of property that can be expensed as a means of defining small businesses while the second limitation prevents the expense from creating a loss for the taxable year.

23. [LO 3] Compare and contrast the types of businesses that would benefit from and those that would not benefit from the §179 expense.

The availability of the §179 expense is limited by the property placed in service and income limitations. The property placed in service limitation phases out the §179 expense (\$500,000) dollar for dollar for tangible personal property placed in service over the \$2,000,000 threshold. (These are 2013 limits, which we assume to be extended into 2014. The §179 expense reverts back to \$25,000 in 2014 absent Congressional action, and the investment threshold reverts back to \$200,000.) Thus, firms that place \$2,500,000 of property in service during the year are ineligible to deduct any §179 expense. As a result, firms that place in service smaller amounts of property are eligible for the expensing election while those that place large amounts of property in service are ineligible. The second limitation is that firms can only currently expense assets up to net income (before the §179 expense, but after the regular MACRS depreciation expense). As a result, profitable firms are eligible for the §179 expense while firms in a loss position are currently ineligible but may carry the amount forward. Consequently, profitable firms that place a relatively small amount of property in service are able to elect the §179 expense. In contrast, firms that

place in service too much property or are unprofitable are unable to currently expense property under § 179.

24. [LO 3] What strategies will help a business maximize its current depreciation deductions (including §179)? Why might a taxpayer choose not to maximize its current depreciation deductions?

There are several planning strategies that will help a taxpayer maximize its current depreciation deductions. For example, if a taxpayer is close to exceeding the 4th quarter placed in service limitation, which would require the mid-quarter convention resulting in less depreciation, the taxpayer could put off purchases to the beginning of the next taxable year. A taxpayer can elect to expense under §179 assets that are 7-year assets rather than 5-year assets because the first year depreciation percentage is lower for 7-year assets (14.29% versus 20%). As another example, a taxpayer otherwise eligible for §179 expensing can elect to expense assets placed in service during the 4th quarter because expensed assets are not included in the mid-quarter test.

25. [LO 3] Why might a business elect only the §179 expense it can deduct in the current year rather than claiming the full amount available?

Businesses can elect to expense §179 currently, and carry over the expense to future years if they meet the placed-in-service limitation but do not have sufficient income to expense the assets currently. However, a business may elect to expense only the amount it can currently deduct if it believes that maximizes the present value of current and future depreciation expenses. This may occur because carryovers of §179 expense are subject to future placed-in-service and income limitations. For example, a business could elect the expense in the current year (which reduces current and future MACRS depreciation expenses) and not be able to deduct the expense under §179 because the business is also limited in future years—so businesses that are generally limited would be wise not to make the election. Additionally, if taxpayers typically elect the maximum §179 expense annually, the amount would be suspended anyway.

26. [LO3] Describe assets that are considered to be listed property. Why do you think the Internal Revenue Service requires them to be “listed”?

Listed property comprises business assets that taxpayers may wish to use for both business and personal purposes. For example, automobiles, planes, boats, recreation vehicles, and computer equipment and peripherals are considered to be listed property. The IRS wants to track both the personal and business use of these assets to limit depreciation to the business use portion. Additionally, if the business use portion dips below 50%, then

taxpayers must use the straight-line method and potentially recapture excess depreciation deductions.

27. [LO 3] Are taxpayers allowed to claim depreciation expense on assets they use for both business and personal purposes? What are the tax consequences if the business use drops from above 50 percent in one year to below 50 percent in the next?

Yes, taxpayers may depreciate mixed use assets (those used for both business and personal use). However, the otherwise allowable depreciation is reduced by the non-business use, so that depreciation is only allowed to the extent of the business use. If the business use falls below 50% in any subsequent year, then the taxpayer must re-compute depreciation for all prior years as if it had been using the straight line method over the ADS recovery period. If the prior depreciation expenses exceed both the prior depreciation expenses and the current year expense then the taxpayer must recapture the difference into income during the current year.

28. [LO 3] Discuss why Congress limits the amount of depreciation expense businesses may claim on certain automobiles.

Automobiles have historically been the most abused, as well as expensive, type of listed property. To prevent subsidizing business owners' automobiles through deductible depreciation expenses, Congress decided to place a maximum allowable depreciation amount on them. One exception to this rule is bonus depreciation. Congress allows an additional expense of \$8,000 in the first year for automobiles placed into service during 2014 (assuming bonus depreciation is extended to 2014). However, one important exception from the luxury auto rules are that vehicles weighing more than 6,000 pounds are not subject to the limit and are also allowed to expense up to \$25,000 during the first year under §179.

29. [LO 3] Compare and contrast how a Land Rover SUV and a Mercedes Benz sedan are treated under the luxury auto rules. Also include a discussion of the similarities and differences in available §179 expense.

A Mercedes Benz sedan is less than 6,000 pounds and qualifies as a luxury automobile. This limits depreciation to the restrictive luxury auto amounts. In contrast, the Land Rover is more than 6,000 pounds and escapes the luxury auto rules. This is advantageous for two reasons: (1) the buyer may currently expense \$25,000 under §179 and (2) the property is not subject to the luxury auto limits.

30. [LO 4] What is a §197 intangible? How do taxpayers recover the costs of these intangibles? How do taxpayers recover the cost of a §197 intangible that expires (such as a covenant not to compete)?

A §197 intangible is a purchased intangible including: goodwill, going concern value, workforce in place, patents, customer lists, and similar assets. §197 intangibles are amortized over 180 months (15 years) using the straight-line method, and the full-month convention. To prevent game-playing among the basis allocations of various §197 intangibles acquired together, no loss is allowed on a §197 intangible until the last intangible purchased together is disposed of. For example, in the past, taxpayers would allocate substantial basis to a 3-year covenant not to compete or some other short-live intangible rather than goodwill (with a longer recovery period). If a §197 intangible expires or is disposed of before the 180 month amortization period expires any remaining basis of the disposed intangible is allocated among the remaining intangibles purchased at the same time.

31. [LO 4] Compare and contrast the tax and financial accounting treatment of goodwill. Are taxpayers allowed to deduct amounts associated with self-created goodwill?

US GAAP requires goodwill to be capitalized and tested annually for impairment. If and when the goodwill is impaired, the difference between the book value and the new fair value will be expensed. For tax purposes, goodwill is treated like any other §197 intangible. §197 intangibles are amortized over 180 months (15 years) using the straight-line method, and the full-month convention.

With respect to self-created assets taxpayers must amortize any capitalized costs (any unamortized research and experimentation expenses and with fees necessary to create the asset) over the life of the asset. For financial accounting these costs are normally expensed.

32. [LO 4] Compare and contrast the similarities and differences between organizational expenditures and start-up costs for tax purposes.

Organizational expenditures and start-up costs are sometimes confused because both expense types are similar in that they are both incurred about the time the business begins. However, the expenses relate to different concerns. Start-up costs are costs that would be deductible as ordinary trade or business expense under §162, except for the fact that the trade or business had not started. An example of start-up costs is employee wages incurred before actual production begins at the factory. Alternatively, organizational expenditures relate to professional fees related to creating the entity. An example of organizational expenditures is attorney fees incurred for preparation of the corporate charter or partnership agreement. Additionally, all businesses can deduct start-up costs, but only corporations and partnerships can deduct organizational expenditures.

33. [LO 4] Discuss the methodology used to determine the amount of organizational expenditures or start-up costs that may be immediately expensed in the year a taxpayer begins business.

Start-up costs can be expensed up to \$5,000 and organizational expenditures can each be expensed, up to \$5,000, in the year the business begins. However, the current expense is reduced dollar for dollar if the expenses exceed a threshold amount. The threshold for both start-up costs and organizational expenditures is \$50,000. Any remaining expenses can be amortized over 15 years (180 months) for both types of costs. For example, if a taxpayer incurs \$23,000 of organizational costs, it may currently expense \$5,000—since the total expense is less than the \$50,000 threshold. The remaining \$18,000 (\$23,000 - \$5,000 expense) may be amortized at a rate of \$100 per month (\$18,000 / 180 months).

34. [LO 4] Explain the amortization convention applicable to intangible assets.

MACRS uses the half-year, mid-quarter, and mid-month conventions. These simplifying conventions assume that the asset was placed in service during the middle of the year, quarter, or month, respectively. Intangibles are amortized using the full-month convention. This convention allows a full or entire month of amortization in each month the asset is owned—beginning with the month the intangible is placed in service.

35. [LO 4] Compare and contrast the recovery periods of §197 intangibles, organizational expenditures, start-up costs, and research and experimentation expenses.

All intangibles are amortized using the full-month convention over the applicable recovery period. §197 assets must be amortized over a 15-year recovery period. Organizational expenditures and start-up costs are eligible for up to \$5,000 of expensing in the year the business begins. This expense is reduced dollar for dollar over a \$50,000 threshold. The remaining expenses are amortized over a 15-year recovery period. Research and experimentation expenses may be capitalized or amortized over the determinable useful life, or if no determinable life, not less than 60 months. Any unamortized expense that is allocable to a self-created intangible such as a patent is amortized over the intangible's life.

36. [LO 5] Compare and contrast the cost and percentage depletion methods for recovering the costs of natural resources. What are the similarities and differences between the two methods?

Both cost and percentage depletion methods are used to recoup the cost of natural resources. A taxpayer is allowed to deduct the depletion method that results in the largest deduction in the current year. Cost depletion is a

cost recovery method based on the amount of the estimated raw materials used during the year. The basic premise is that a business ratably recovers the cost basis of the resource as it is used up. Cost depletion is taken until the basis of the asset is recovered. If the natural resource is exhausted before the basis is recovered then the remaining basis is expensed. In contrast, percentage depletion is a statutory method that allows an expense based on the lesser of 50% of net income from the activity or a percentage (statutorily determined) of the gross receipts from the business during the current year. Percentage depletion is allowed to continue even after the asset's basis has been fully recovered.

37. [LO 5] Explain why percentage depletion has been referred to as a government subsidy.

Percentage depletion is often referred to as a government subsidy because it is an expense designed to encourage production of specific resources. For example, oil and gas, coal, and many other natural resources are assigned specific percentage depletion rates (between 5% and 22%), while timber is excluded from resources applicable to the method. To encourage development of a certain resource, Congress can simply raise the statutory percentage for the resource type. In addition, percentage depletion expense can transcend reality. How many expenses are allowed to exceed the taxpayer's basis in an asset? Very few expenses, if any are allowed in excess of basis. Savvy taxpayers can underestimate the estimate of a natural resource, accelerate its cost recovery through cost depletion, and then continue to receive depletion benefits through percentage depletion. For these reasons, percentage depletion is referred to as a subsidy.

Problems

38. [LO 1] Jose purchased a delivery van for his business through an online auction. His winning bid for the van was \$24,500. In addition, Jose incurred the following expenses before using the van: shipping costs of \$650; paint to match the other fleet vehicles at a cost of \$1,000; registration costs of \$3,200 which included \$3,000 of sales tax and a registration fee of \$200; wash and detailing for \$50; and an engine tune-up for \$250. What is Jose's cost basis for the delivery van?

\$29,150, cost basis in the delivery van, computed as follows:

<i>Description</i>	<i>Amount</i>	<i>Explanation*</i>
<i>Purchase price</i>	<i>\$24,500</i>	
<i>Shipping costs</i>	<i>650</i>	<i>Business preparation cost</i>

Paint	1,000	Business preparation cost
Sales tax	<u>3,000</u>	Business preparation cost
Total cost basis	\$29,150	

**Note that the registration fee, washing and detailing, and engine tune-up are costs for repairs and maintenance that are not required to be capitalized.*

39. [LO 1] Emily purchased a building to store inventory for her business. The purchase price was \$760,000. Beyond this, Emily incurred the following necessary expenses to get the building ready for use: \$10,000 to repair the roof, \$5,000 to make the interior suitable for her finished goods, and \$300 in legal fees. What is Emily's cost basis in the new building?

\$765,300 cost basis, computed as follows:

Description	Amount	Explanation
Purchase price	\$760,000	
Improvements	5,000	Business preparation costs
Legal fees	<u>300</u>	Business preparation costs
Cost basis in building	\$765,300*	

**Note that the \$10,000 repair for the roof was not capitalized. The repair is likely a routine maintenance expenditure rather than a capitalized cost. However, if the expense improved or prolonged the life of the asset beyond what would be considered maintenance to keep it in its working condition, it would be capitalized.*

40. [LO 1] Dennis contributed business assets to a new business in exchange for stock in the company. The exchange did not qualify as a nontaxable exchange. The fair market value of these assets was \$287,000 on the contribution date. Dennis's original basis in the assets he contributed was \$143,000, and the accumulated depreciation on the assets was \$78,000.

- a. What is the business's basis in the assets it received from Dennis?
- b. What would be the business's basis if the transaction qualified as a nontaxable exchange?

- a. *Because this exchange is a fully taxable transaction, the business's basis in Dennis's assets is the \$287,000 fair market value of the assets.*
- b. *If the transaction qualified as a nontaxable exchange, the business would take the same adjusted basis in the assets that Dennis had. That is, the business will receive an exchanged basis of \$65,000 (\$143,000 original basis minus accumulated depreciation of \$78,000) in the assets.*

41. [LO 1] Brittany started a law practice as a sole proprietor. She owned a computer, printer, desk, and file cabinet she purchased during law school (several years ago) that she is planning to use in her business. What is the depreciable basis that Brittany should use in her business for each asset, given the following information?

Asset	Purchase Price	FMV at Time Converted to Business use
Computer	\$2,500	\$800
Printer	\$300	\$150
Desk	\$1,200	\$1,000
File cabinet	\$200	\$225

The basis of assets converted from personal use to business use is the lesser of (1) fair market value on date of conversion or (2) basis on the date of conversion. The basis of each asset is as follows:

Asset	(1) FMV	(2) Basis on Date of Conversion	Lesser of (1) or (2) Depreciable Basis
<i>Computer</i>	<i>\$800</i>	<i>\$2,500</i>	<i>\$800</i>
<i>Printer</i>	<i>\$150</i>	<i>\$300</i>	<i>\$150</i>
<i>Desk</i>	<i>\$1,000</i>	<i>\$1,200</i>	<i>\$1,000</i>
<i>File cabinet</i>	<i>\$225</i>	<i>\$200</i>	<i>\$200</i>

42. [LO 1] Meg O'Brien received a gift of some small-scale jewelry manufacturing equipment that her father had used for personal purposes for many years. Her father originally purchased the equipment for \$1,500. Because the equipment is out of production and no longer available, the property is currently worth \$4,000. Meg has decided to begin a new jewelry manufacturing trade or business. What is her depreciable basis for depreciating the equipment?

The basis of a gift is a carryover basis from the donor. Therefore Meg's depreciable basis in the property is \$1,500.

43. [LO 1] Gary inherited a Maine summer cabin on 10 acres from his grandmother. His grandparents originally purchased the property for \$500 in 1950 and built the cabin at a cost of \$10,000 in 1965. His grandfather died in 1980 and when his grandmother recently passed away, the property was appraised at \$500,000 for the land and \$700,000 for the cabin. Since Gary doesn't currently live in New England, he decided that it would be best to put the property to use as a rental. What is Gary's basis in the land and in the cabin?

The basis of inherited property is the fair market value on the date of death or, if elected by the estate, the alternate valuation date if less.

Consequently, Gary's basis will be \$500,000 in the land and \$700,000 for the cabin.

44. [LO 1] Wanting to finalize a sale before year-end, on December 29, WR Outfitters sold to Bob a warehouse and the land for \$125,000. The appraised fair market value of the warehouse was \$75,000, and the appraised value of the land was \$100,000.
- What is Bob's basis in the warehouse and in the land?
 - What would be Bob's basis in the warehouse and in the land if the appraised value of the warehouse is \$50,000, and the appraised value of the land is \$125,000?
 - Which appraisal would Bob likely prefer?

NOTE: This is a bargain purchase. The sales price is less than the appraised value. This solution uses the relative appraised values of the land and the warehouse to allocate the purchase price between these two assets.

a. Bob's cost basis in the land is \$71,429. Because the purchase price is less than the appraised values for the land and the warehouse, the purchase price must be allocated between the land and the warehouse. The \$71,429 basis for the land is the amount of the \$125,000 purchase price that is allocated to the land based on the relative value of the land (\$100,000) to the value of the land (\$100,000) plus the value of the warehouse (\$75,000) based on the appraisal. The formula used to determine the basis allocated to the land is $\$125,000 \text{ (purchase price)} \times \$100,000 / (\$100,000 + 75,000)$. Use the same process to determine that Bob's basis in the warehouse is \$53,571.

b. Bob's cost basis for the land is \$89,286. Because the purchase price is less than the appraised values for the land and the warehouse, the purchase price must be allocated between the land and the warehouse. The \$89,286 basis for the land is the amount of the \$125,000 purchase price that is allocated to the land based on the relative value of the land (\$125,000) to the value of the land (\$125,000) plus the value of the warehouse (\$50,000) based on the appraisal. The formula used to determine the basis allocated to the land is $\$125,000 \text{ (purchase price)} \times \$125,000 / (\$50,000 + 125,000)$. Use the same process to determine that Bob's basis in the warehouse is \$35,714.

c. Bob would likely prefer the appraisal from part (a), because the appraisal allows him to allocate more basis to the warehouse, which is depreciable.

45. [LO 2] At the beginning of the year, Poplock began a calendar-year dog boarding business called Griff's Palace. Poplock bought and placed in service the following assets during the year:

Asset	Date Acquired	Cost Basis
Computer equipment	3/23	\$5,000
Dog grooming furniture	5/12	\$7,000
Pickup truck	9/17	\$10,000
Commercial building	10/11	\$270,000
Land (one acre)	10/11	\$80,000

Assuming Poplock does not elect §179 expensing or bonus depreciation, answer the following questions:

- What is Poplock's year 1 depreciation expense for each asset?
- What is Poplock's year 2 depreciation expense for each asset?

a. \$5,445, under the half-year convention for personal property, calculated as follows:

<u>Asset</u>	<u>Purchase Date</u>	<u>Quarter</u>	<u>Recovery period</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
Computer equipment	23-Mar	1 st	5 years	\$5,000	20.00%	\$1,000
Dog grooming furniture	12-May	2 nd	7 years	\$7,000	14.29%	\$1,000
Pickup truck	17-Sep	3 rd	5 years	\$10,000	20.00%	\$2,000
Building	11-Oct	4 th	39 years	\$270,000	0.535%	<u>\$1,445</u>
						\$5,445

b. \$13,437, calculated as follows:

<u>Asset</u>	<u>Purchase Date</u>	<u>Quarter</u>	<u>Recovery period</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
Computer equipment	23-Mar	1 st	5 years	\$5,000	32.00%	\$1,600
Dog grooming furniture	12-May	2 nd	7 years	\$7,000	24.49%	\$1,714
Pickup truck	17-Sep	3 rd	5 years	\$10,000	32.00%	\$3,200
Building	11-Oct	4 th	39 years	\$270,000	2.564%	<u>\$6,923</u>
						\$13,437

46. [LO 2] DLW Corporation acquired and placed in service the following assets during the year:

Asset	Date Acquired	Cost Basis
-------	---------------	------------

Computer equipment	2/17	\$10,000
Furniture	5/12	\$17,000
Commercial building	11/1	\$270,000

Assuming DLW does not elect §179 expensing or bonus depreciation, answer the following questions:

- a. What is DLW's year 1 cost recovery for each asset?
- b. What is DLW's year 3 cost recovery for each asset if DLW sells all of these assets on 1/23 of year 3?

a. \$5,296, under the half-year convention for personal property, calculated as follows:

<u>Asset</u>	<u>Purchase Date</u>	<u>Quarter</u>	<u>Recovery period</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
Computer equipment	17-Feb	1 st	5 years	\$10,000	20.00%	\$2,000
Furniture	12-May	2 nd	7 years	\$17,000	14.29%	\$2,429
Building	1-Nov	4 th	39 years	\$270,000	0.321%	\$867
						\$5,296

b. \$2,735, calculated as follows:

<u>Asset</u>	<u>Original Basis</u>	<u>Recovery period</u>	<u>Rate</u>	<u>Portion of Year</u>	<u>Depreciation Expense</u>
Computer equipment	\$10,000	5 years	19.2%	50.00%	\$960
Furniture	\$17,000	7 years	17.49%	50.00%	\$1,487
Building	\$270,000	39 years	2.564%	4.17%	\$288
Total Depreciation Expense					\$2,735

47. [LO 2] At the beginning of the year, Dee began a calendar-year business and placed in service the following assets during the year:

Asset	Date Acquired	Cost Basis
Computer equipment	3/23	\$5,000
Furniture	5/12	\$7,000
Pickup truck	11/15	\$10,000
Commercial building	10/11	\$270,000

Assuming Dee does not elect §179 expensing or bonus depreciation, answer the following questions:

- a. What is Dee's year 1 cost recovery for each asset?

b. What is Dee's year 2 cost recovery for each asset?

a. \$4,945, using the mid-quarter convention for personal property, as calculated below. Dee is required to use the mid-quarter convention because more than 40 percent of the tangible personal property was placed in service during the 4th quarter. Dee placed 45.45% ($\$10,000 / (\$5,000 + \$7,000 + \$10,000)$) of the tangible personal property in service during the 4th quarter.

<u>Asset</u>	<u>Purchase Date</u>	<u>Quarter</u>	<u>Recovery period</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Cost Recovery</u>
Computer equipment	23-Mar	1 st	5 years	\$5,000	35.00%	\$1,750
Furniture	12-May	2 nd	7 years	\$7,000	17.85%	\$1,250
Pickup truck	15-Nov	4 th	5 years	\$10,000	5.00%	\$500
Building	11-Oct	4 th	39 years	\$270,000	0.535%	\$1,445
						\$4,945

b. \$13,666, using the mid-quarter convention for personal property, calculated as follows:

<u>Asset</u>	<u>Purchase Date</u>	<u>Quarter</u>	<u>Recovery period</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Cost Recovery</u>
Computer equipment	23-Mar	1 st	5 years	\$5,000	26.00%	\$1,300
Furniture	12-May	2 nd	7 years	\$7,000	23.47%	\$1,643
Pickup truck	15-Nov	4 th	5 years	\$10,000	38.00%	\$3,800
Building	11-Oct	4 th	39 years	\$270,000	2.564%	\$6,923
						\$13,666

48. [LO 2] Evergreen Corporation (calendar year end) acquired the following assets during the current year (ignore §179 expense and bonus depreciation for this problem):

<u>Asset</u>	<u>Placed in Service Date</u>	<u>Original Basis</u>
Machinery	October 25	\$70,000
Computer Equipment	February 3	\$10,000
Used Delivery Truck*	August 17	\$23,000
Furniture	April 22	\$150,000

*The delivery truck is not a luxury automobile.

- What is the allowable MACRS depreciation on Evergreen's property in the current year?
- What is the allowable MACRS depreciation on Evergreen's property in the current year if the machinery had a basis of \$170,000 rather than \$70,000?

a. \$38,038, under the half year convention, calculated as follows:

<u>Asset</u>	<u>Placed in Service</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
Computer equipment (5 year)	February 3	\$10,000	20.00%	\$2,000
Furniture (7 year)	April 22	\$150,000	14.29%	\$21,435
Used delivery truck (5 year)	August 17	\$23,000	20.00%	\$4,600
Machinery (7 year)	October 25	<u>\$70,000</u>	14.29%	<u>\$10,003</u>
Total		\$253,000		\$38,038

Evergreen isn't required to use the mid-quarter convention because only 27.67% of its tangible personal property was placed in service during the 4th quarter (70,000/253,000). Additionally, the delivery truck is not considered to be a luxury auto

b. \$39,794, under the mid-quarter convention, as computed below. Evergreen is required to use the mid-quarter convention because greater than 40 percent of tangible personal property was placed in service during the 4th quarter. Evergreen placed 48.2% [$\$170,000 / (\$10,000 + \$23,000 + \$150,000 + \$170,000)$] of its tangible personal property in service during the 4th quarter.

(1)

<u>Asset</u>	<u>Placed in Service</u>	<u>Quarter</u>	<u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
Computer equipment (5 year)	February 3	1 st	\$10,000	35.00%	\$3,500
Furniture (7 year)	April 22	2 nd	\$150,000	17.85%	\$26,775
Used delivery truck (5 year)	August 17	3 rd	\$23,000	15.00%	\$3,450
Machinery (7 year)	October 25	4 th	<u>\$170,000</u>	3.57%	<u>\$6,069</u>
Total			\$353,000		\$39,794

49. [LO 2] Convers Corporation (June 30 year-end) acquired the following assets during the current tax year (ignore §179 expense and bonus depreciation for this problem):

<u>Asset</u>	<u>Placed in Service Date</u>	<u>Original Basis</u>
Machinery	October 25	\$70,000
Computer Equipment	February 3	\$10,000
Used Delivery Truck*	March 17	\$23,000
Furniture	April 22	<u>\$150,000</u>
Total		\$253,000

*The delivery truck is not a luxury automobile.

What is the allowable MACRS depreciation on Convers' property in the current year?

\$22,800, under the mid-quarter convention, as computed below. *Convers is required to use the mid-quarter convention because greater than 40 percent of tangible personal property was placed in service during its 4th quarter. Convers placed 59.3% [$\$150,000 / (\$70,000 + \$10,000 + \$23,000 + \$150,000)$] of its tangible personal property in service during the 4th quarter (April – June).*

<u>Asset</u>	<u>Placed in Service</u>	<u>Quarter</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) × (2) <u>Depreciation</u>
Machinery (7 year)	October 25	2 nd	\$70,000	17.85%	\$12,495
Computer Equipment (5 year)	February 3	3 rd	\$10,000	15.00%	\$1,500
Used delivery truck (5 year)	March 17	3 rd	\$23,000	15.00%	\$3,450
Furniture (7 year)	April 22	4 th	<u>\$150,000</u>	3.57%	<u>\$5,355</u>
Total			\$253,000		\$22,800

50. [LO 2] {Planning} Parley needs a new truck to help him expand Parley's Plumbing Palace. Business has been booming and Parley would like to accelerate his tax deductions as much as possible (ignore §179 expense and bonus depreciation for this problem). On April 1, Parley purchased a new delivery van for \$25,000. It is now September 26 and Parley, already in need of another vehicle, has found a deal on buying a truck for \$22,000 (all fees included). The dealer tells him if he doesn't buy the truck (Option 1), it will be gone tomorrow. There is an auction (Option 2) scheduled for October 5 where Parley believes he can get a similar truck for \$21,500, but there is also a \$500 auction fee.

- Which option allows Parley to generate more depreciation expense deductions this year (the vehicles are not considered to be luxury autos)?
- Assume the original facts except that the delivery van was placed in service one day earlier on March 31 rather than April 1. Which option generates more depreciation expense?

a. Option 1 generates more depreciation. Option 1 generates \$9,400 of depreciation and Option 2 generates \$7,350.

Option 1: Half-year convention applies

<u>Asset</u>	<u>Date Placed in Service</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
Delivery Van	April 1	\$25,000	20.00%	\$5,000
Option 1	September 26	\$22,000	20.00%	<u>\$4,400</u>
Total				\$9,400

Option 2: Mid-quarter convention applies

<u>Asset</u>	<u>Date Placed in Service</u>	<u>Quarter</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
Delivery Van	April 1	2 nd	\$25,000	25.00%	\$6,250

Option 2	October 5	4 th	\$22,000	5.00%	<u>\$1,100</u>
Total					<u>\$7,350</u>

b. Option 2 generates more depreciation expense (\$9,850 vs. 9,400).

Under Option 1, because the half-year convention applies, the depreciation expense is \$9,400, the same as it is in part a.

Under Option 2, because the mid-quarter convention applies and the Delivery Van was placed in service in the first quarter (on March 31), Parley is allowed to deduct more depreciation overall. The depreciation under Option 2 in this scenario is \$9,850, computed as follows:

Option 2: Mid-quarter convention applies

<u>Asset</u>	<u>Date Placed in Service</u>	<u>Quarter</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
Delivery van	March 31	1 st	\$25,000	35.00%	\$8,750
Option 2	October 5	4 th	\$22,000	5.00%	<u>\$1,100</u>
Total					<u>\$9,850</u>

51. [LO 2] Way Corporation disposed of the following tangible personal property assets in the current year. Assume that the delivery truck is not a luxury auto. Calculate Way Corporation's 2014 depreciation expense (ignore §179 expense and bonus depreciation for this problem).

Asset	Date acquired	Date sold	Convention	Original Basis
Furniture (7 year)	5/12/10	7/15/14	HY	\$55,000
Machinery (7 year)	3/23/11	3/15/14	MQ	\$72,000
Delivery truck* (5 year)	9/17/12	3/13/14	HY	\$20,000
Machinery (7 year)	10/11/13	8/11/14	MQ	\$270,000
Computer (5 year)	10/11/14	12/15/14	HY	\$80,000

*Used 100 percent for business.

Depreciation is \$51,851, calculated as follows:

<u>Asset</u>	<u>Original Basis</u>	<u>Quarter If mid quarter</u>	<u>Rate</u>	<u>Portion of Year</u>	<u>Depreciation Expense</u>
Furniture	\$55,000	n/a	8.93%	50.00%	\$2,456
Machinery	\$72,000	1 st	10.93%	12.50%	\$984
Delivery truck	\$20,000	n/a	19.20%	50.00%	\$1,920
Machinery	\$270,000	4 th	27.55%	62.50%	\$46,491
Computer	\$80,000	n/a	0.00%	50.00%	<u>\$0 *</u>
Total Depreciation Expense					\$51,851

*No depreciation for assets acquired and disposed of in the same year.

52. [LO 2] On November 10 of year 1 Javier purchased a building, including the land it was on, to assemble his new equipment. The total cost of the purchase was \$1,200,000; \$300,000 was allocated to the basis of the land and the remaining \$900,000 was allocated to the basis of the building.

- a. Using MACRS, what is Javier's depreciation expense on the building for years 1 through 3?
- b. What would be the year 3 depreciation expense if the building was sold on August 1 of year 3?
- c. Answer the question in part (a), except assume the building was purchased and placed in service on March 3 instead of November 10.
- d. Answer the question in part (a), except assume that the building is residential property.
- e. What would be the depreciation for 2014, 2015, and 2016 if the property were nonresidential property purchased and placed in service November 10, 1997 (assume the same original basis)?

a. The depreciation for the 3 years is computed as follows:

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
1	SL	39	Nov. 10	\$900,000	0.321%	\$2,889
2				\$900,000	2.564%	\$23,076
3				\$900,000	2.564%	\$23,076

b. The depreciation for year 3 would be \$14,423 and is computed as follows (The building is sold in month 8 so depreciation for the year is for 8 minus one-half month = 7.5 months.):

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
3	SL	39	Nov. 10	\$900,000	2.564%	\$23,076
					Partial year	$\times \frac{7.5}{12}$
						\$14,423

c. The depreciation for years 1 – 3 is computed as follows (note that years 2 and 3 are the same):

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	(1) <u>Original Basis</u>	(2) <u>Rate</u>	(1) x (2) <u>Depreciation</u>
1	SL	39	March 3	\$900,000	2.033%	\$18,297
2				\$900,000	2.564%	\$23,076
3				\$900,000	2.564%	\$23,076

d. If the property was residential real property, the building is depreciated over 27.5 years instead of 39 years. The depreciation for years 1 - 3 is computed as follows:

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
1	SL	27.5	Nov. 10	\$900,000	0.455%	\$4,095
2				\$900,000	3.636%	\$32,724
3				\$900,000	3.636%	\$32,724

e. If the property was nonresidential real property purchased in 1997, the depreciation for the 3 years is computed as follows for years 18, 19, and 20 in the depreciation table:

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
2014	SL	39	1997	\$900,000	2.564%	\$23,076
2015				\$900,000	2.564%	\$23,076
2016				\$900,000	2.564%	\$23,076

53. [LO 2] Carl purchased an apartment complex for \$1.1 million on March 17 of year 1. \$300,000 of the purchase price was attributable to the land the complex sits on. He also installed new furniture into half of the units at a cost of \$60,000.
- What is Carl's allowable depreciation expense for his real property for years 1 and 2?
 - What is Carl's allowable depreciation expense for year 3 if the real property is sold on January 2 of year 3?

a. The depreciation on the real property for the 2 years is computed as follows:

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
1	SL	27.5	March 17	\$800,000	2.879%	\$23,032
2				\$800,000	3.636%	\$29,088

Note that the furniture is depreciable personal property.

b. The depreciation for year 3 is computed as follows:

<u>Year</u>	<u>Method</u>	<u>Recovery Period</u>	<u>Date Placed in Service</u>	<u>(1) Original Basis</u>	<u>(2) Rate</u>	<u>(1) x (2) Depreciation</u>
3	SL	27.5	March 17	\$800,000	3.636%	\$29,088
					Partial year*	$x .5/12$
						\$1,212

*mid- month convention applies to real property in year of acquisition and year of disposition.

54. [LO 2, LO 3] AMP Corporation (calendar year end) has 2014 taxable income of \$900,000 before the §179 expense. During 2014, AMP acquired the following assets:

<u>Asset</u>	<u>Placed in Service</u>	<u>Basis</u>
Machinery	September 12	\$1,550,000
Computer Equipment	February 10	365,000
Office Building	April 2	<u>480,000</u>
Total		\$2,395,000

- a) What is the maximum amount of §179 expense AMP may deduct for 2014 (assume the 2013 §179 limits are extended to 2014)?
 b) What is the maximum total depreciation expense, including §179 expense, that AMP may deduct in 2014 on the assets it placed in service in 2014 assuming no bonus depreciation (assume the 2013 §179 limits are extended to 2014)?

a. The maximum §179 expense is \$500,000.

Description	Amount	Explanation
(1) Property placed in service in 2014	\$1,915,000	Total §179 qualified property
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	\$-0-	(1) – (2) (<i>permanently disallowed</i>), not less than \$0.
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>\$-0-</u>	From (3)
Maximum §179 expense after phase-out	\$500,000	(4) – (5)

b. The maximum depreciation expense is \$731,776 (half-year convention).

Depreciation is maximized by applying the §179 expense against 7-year rather than 5-year property.

Asset	Original Basis	§179 Expense	Remaining Basis	Rate	Depreciation Expense
Machinery (7-year)	\$1,550,000	\$500,000	\$1,050,000	14.29%	\$150,045
Computer Equipment (5-year)	\$365,000		\$365,000	20.00%	\$73,000
Office building (39 year)	\$480,000		\$480,000	1.819%	\$8,731
§179 Expense					<u>\$500,000</u>
Total cost recovery					\$731,776

55. [LO 2, LO 3] Assume that TDW Corporation (calendar year end) has 2014 taxable income of \$650,000 before the §179 expense, acquired the following assets during 2014:

Asset	Placed in Service	Basis
Machinery	October 12	\$1,270,000
Computer Equipment	February 10	263,000
Furniture	April 2	<u>880,000</u>
Total		\$2,413,000

- a) What is the maximum amount of §179 expense TDW may deduct for 2014 (assume the 2013 §179 limits are extended to 2014)?
 b) What is the maximum total depreciation expense, including §179 expense, that TDW may deduct in 2014 on the assets it placed in service in 2014 assuming no bonus depreciation (assume the 2013 §179 limits are extended to 2014)?

a. The maximum §179 expense is \$87,000.

Description	Amount	Explanation
(1) Property placed in service in 2014	\$2,413,000	Total qualified property
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	\$413,000	(1) – (2) (<i>permanently disallowed</i>)
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>\$413,000</u>	From (3)
(6) Maximum §179 expense after phase-out	\$87,000	(4) – (5)

b. The maximum depreciation expense is \$378,363 (mid-quarter convention).

Depreciation is maximized by applying the §179 expense against 7-year rather than 5-year property, and in this case, depreciation is maximized by applying the §179 expense against the machinery.

Asset	Original Basis	§179 Expense	Remaining Basis	Rate	Depreciation Expense
Machinery (7-year)	\$1,270,000	\$87,000	\$1,183,000	3.57%	\$42,233
Computer Equipment (5-year)	\$263,000		\$263,000	35.00%	92,050
Furniture (7 year)	\$880,000		\$880,000	17.85%	157,080
§179 Expense					<u>87,000</u>
Total cost recovery					\$378,363

56. [LO 2, LO 3] Assume that Timberline Corporation has 2014 taxable income of \$240,000 before the §179 expense (assume the 2013 §179 limits are extended to 2014).

Asset	Purchase Date	Basis
Furniture (7-year)	December 1	\$350,000
Computer Equipment (-5 year)	February 28	90,000
Copier (5-year)	July 15	30,000
Machinery (7-year)	May 22	<u>480,000</u>
Total		\$950,000

- What is the maximum amount of §179 expense Timberline may deduct for 2014? What is Timberline's §179 carryforward to 2015, if any?
- What would Timberline's *maximum* depreciation expense be for 2014 assuming no bonus depreciation?
- What would Timberline's *maximum* depreciation expense be for 2014 if the furniture cost \$2,000,000 instead of \$350,000 and assuming no bonus depreciation?

a) *The maximum section 179 expense would be \$240,000:*

Description	Amount	Explanation
(1) <i>Property placed in service</i>	\$950,000	Total qualified assets
(2) <i>Threshold for §179 phase-out</i>	<u>(2,000,000)</u>	2014 amount (§179(b)(2))
(3) <i>Phase-out of maximum §179 expense</i>	\$0	(1) – (2) (permanently disallowed), not less than \$0.
(4) <i>Maximum 179 expense before phase-out</i>	\$500,000	2014 amount (§179(b)(1))
(5) <i>Phase-out of maximum §179 expense</i>	<u>\$0</u>	From (3)
(6) Maximum §179 expense after phase-out	\$500,000	(4) – (5)
(7) <i>Taxable income before §179 deduction</i>	\$240,000	Given in problem
(8) §179 expense after taxable income limitation.	\$240,000	Lesser of (6) and (7)
§179 carryforward to next year	\$260,000	(6) – (8)

b) *The half-year convention applies because only 15.49% of its personal property was placed in service in the 4th quarter $((\$350,000 - 240,000) / (950,000 - 240,000)) = 110,000 / 710,000$. (Because the mid-quarter test is applied after taking §179 expense, it is optimal to take the §179 expense against qualified property placed into service during the fourth quarter.)*

Timberline's depreciation expense is \$348,311 computed as follows:

Asset	Original Basis	§179 Expense	Remaining Basis*	Rate	Depreciation Expense
--------------	-----------------------	---------------------	-------------------------	-------------	-----------------------------

<i>Furniture</i>	\$350,000	\$240,000	\$110,000	14.29%	\$15,719
<i>Computer Equipment</i>	\$90,000		\$90,000	20.00%	\$18,000
<i>Copier</i>	\$30,000		\$30,000	20.00%	\$6,000
<i>Machinery</i>	\$480,000		\$480,000	14.29%	\$68,592
<i>§179 Expense</i>					<u>\$240,000</u>
<i>Total Depreciation Expense</i>					<u>\$348,311</u>

Depreciation expense is maximized by applying the §179 expense against 7-year instead of 5-year property.

c) The maximum section 179 expense would be \$0, computed as follows:

Description	Amount	Explanation
(1) Property placed in service	\$2,600,000	Total of qualifying assets
(2) Threshold for §179 phase-out	(2,000,000)	2014 amount (§179(b)(2))
(3) Phase-out of maximum §179 expense	\$600,000	(1) – (2) (permanently disallowed)
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>\$600,000</u>	From (3)
Maximum §179 expense after phase-out	\$0	(4) – (5), but not below 0

The maximum depreciation expense for 2014 using the mid-quarter convention would be \$193,080, computed as follows:

Asset	Original Basis	§179 Expense	Remaining Basis*	Quarter	Rate	Depreciation Expense
<i>Furniture</i>	\$2,000,000		\$2,000,000	4 th	3.57%	\$71,400
<i>Computer Equipment</i>	\$90,000		\$90,000	1 st	35.00%	\$31,500
<i>Copier</i>	\$30,000		\$30,000	3 rd	15.00%	\$4,500
<i>Machinery</i>	\$480,000		\$480,000	2 nd	17.85%	\$85,680
<i>§179 Expense</i>						<u>\$0</u>
<i>Total Depreciation Expense</i>						\$193,080

57. [LO 2, LO 3] {Planning} Dain's Diamond Bit Drilling purchased the following assets this year. Assume its taxable income for the year was \$53,000 before deducting any §179 expense (assume no bonus depreciation but assume that the 2013 §179 limits are extended to 2014).

Asset	Purchase Date	Original Basis
Drill Bits (5-year)	January 25	\$90,000
Drill Bits (5-year)	July 25	95,000
Commercial Building	April 22	220,000

- a) What is the maximum amount of §179 expense Dain may deduct for the year?

- b) What is Dain's *maximum* depreciation expense for the year (including §179 expense)?
- c) If the January drill bits' original basis was \$2,375,000, what the maximum amount of §179 expense Dain may deduct for the year?
- d) If the January drill bits' basis was \$2,495,000, what the maximum amount of §179 expense Dain may deduct for the year?

a) The maximum section 179 expense is \$53,000, computed as follows:

Description	Amount	Explanation
(1) Property placed in service this year	\$185,000	Total of qualifying assets
(2) Threshold for §179 phase-out	(2,000,000)	2014 amount (§179(b)(2))
(3) Phase-out of maximum §179 expense	\$0	(1) – (2) (<i>permanently disallowed</i>), not less than \$0
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount (§179(b)(1))
(5) Phase-out of maximum §179 expense	\$0	From (3)
(6) Maximum §179 expense after phase-out	\$500,000	(4) – (5)
(7) Taxable income before §179 deduction	\$53,000	Assumed in problem
§179 expense deductible in 2013 after taxable income limitation.	\$53,000	Lesser of (6) and (7)

b) Dain's depreciation expense would be \$83,402, calculated as follows:

Asset	Original Basis	§179 Expense	Remaining Basis*	Rate	Depreciation Expense
Drill Bits (5 year)	\$90,000	\$53,000	\$37,000	20.00%	\$7,400
Drill Bits (5 year)	\$95,000		\$95,000	20.00%	\$19,000
Commercial Building (39 year)	\$220,000		\$220,000	1.819%	\$4,002
§179 Expense					\$53,000
Total Depreciation Expense					\$83,402

c) The maximum section 179 expense would be \$30,000:

Description	Amount	Explanation
(1) Property placed in service	\$2,470,000	Total of qualifying assets
(2) Threshold for §179 phase-out	(2,000,000)	2014 amount (§179(b)(2))
(3) Phase-out of maximum §179 expense	\$470,000	(1) – (2) (<i>permanently disallowed</i>)
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount (§179(b)(1))
(5) Phase-out of maximum §179 expense	\$470,000	From (3)
(6) Maximum §179 expense after phase-out	\$30,000	(4) – (5)
(7) Taxable income before §179 deduction	\$53,000	Assumed in problem
Maximum §179 expense after taxable income limitation.	\$30,000	Lesser of (6) and (7)

d) The maximum section 179 expense would be \$0:

Description	Amount	Explanation
(1) Property placed in service	\$2,590,000	Total of qualifying assets
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount (§179(b)(2))
(3) Phase-out of maximum §179 expense	\$590,000	(1) – (2) (<i>permanently disallowed</i>)
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount (§179(b)(1))
(5) Phase-out of maximum §179 expense	<u>\$590,000</u>	From (3)
(6) Maximum §179 expense after phase-out	\$0	(4) – (5) , not less than \$0
(7) Taxable income before §179 deduction	<u>\$53,000</u>	Assumed in problem
Maximum §179 expense after taxable income limitation.	\$0	Lesser of (6) and (7)

58. [LO 2, LO 3] {Research} Assume that ACW Corporation has 2014 taxable income of \$1,000,000 before the §179 expense, acquired the following assets during 2014 (assume no bonus depreciation but assume that the 2013 §179 limits are extended to 2014):

Asset	Placed in Service	Basis
Machinery	September 12	\$470,000
Computer equipment	February 10	70,000
Delivery truck	August 21	93,000
Qualified leasehold improvements	April 2	<u>380,000</u>
Total		\$1,013,000

- What is the maximum amount of §179 expense ACW may deduct for 2014?
- What is the maximum *total* depreciation expense that ACW may deduct in 2014 on the assets it placed in service in 2014?

a. The maximum §179 expense is \$500,000.

Description	Amount	Explanation
(1) Qualifying property placed in service in 2014	\$1,013,000	Total of qualifying assets
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	\$-0-	(1) – (2) (<i>permanently disallowed</i>), not less than \$0
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>\$-0-</u>	From (3)

Maximum §179 expense after phase-out	\$500,000	(4) – (5)
---	------------------	-----------

b. The maximum depreciation expense is \$568,371 (half year convention). The American Taxpayer Relief Act of 2012 extended §179 for qualified leasehold improvements up to \$250,000 for 2013. Therefore depreciation is maximized by applying the §179 expense against the qualified real property first up to its maximum amount and then applying to the 7-year rather than 5- year property.

Asset	Original Basis	§179 Expense	Remaining Basis*	Rate	Depreciation Expense
Machinery (7-year)	\$470,000	\$250,000	\$220,000	14.29%	\$31,438
Computers (5- year)	\$70,000		\$70,000	20.00%	\$14,000
Delivery Truck (5 year)	\$93,000		\$93,000	20.00%	\$18,600
Leasehold improvements (15 year)*	\$380,000	250,000	\$130,000	3.33%	\$4,333
§179 Expense					<u>\$500,000</u>
Total Depreciation Expense					\$568,371

**The leasehold improvements are 15-year property and must be depreciated using the half-year convention (§168(d)(1) and the straight-line method (§168(e)(3)(E)(iv)).*

59. (LO2, LO3) Chaz Corporation has taxable income in 2014 of \$312,000 before the §179 expense and acquired the following assets during the year:

Asset	Placed in Service	Basis
Office furniture	September 12	\$1,280,000
Computer Equipment	February 10	930,000
Delivery Truck	August 21	<u>68,000</u>
Total		\$2,278,000

What is the maximum *total* depreciation expense that Chaz may deduct in 2014 (assume that the 2013 §179 limits and bonus depreciation are extended to 2014)?

The maximum depreciation expense is \$1,425,394 determined as follows:

Description	Amount	Explanation
(1) Property placed in service	\$2,278,000	Total of qualifying assets
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	\$278,000	(1) – (2) (<i>permanently disallowed</i>)
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>278,000</u>	From (3)

Maximum §179 expense after phase-out	\$ 222,000	(4) – (5), not limited by taxable income
---	-------------------	--

Chaz will receive the most benefit by applying the §179 amount to the furniture (7-year property).

Asset	Original Basis	§179 Expense	Remaining Basis	Bonus Depreciation	Remaining Basis	Rate	Depreciation Expense
Furniture (7-year)	\$1,280,000	\$222,000	\$1,058,000	529,000	\$529,000	14.29%	\$75,594
Computers (5-year)	930,000		930,000	465,000	465,000	20.00%	93,000
Delivery Truck (5 year)	68,000		68,000	34,000	34,000	20.00%	6,800
§179 Expense							\$222,000
Bonus depreciation				\$1,028,000			<u>\$1,028,000</u>
Total Depreciation Expense							\$1,425,394

60. (LO2, LO3) Woolard Inc. has taxable income in 2014 of \$150,000 before any depreciation deductions (§179, bonus, or MACRS) and acquired the following assets during the year:

Asset	Placed in Service	Basis
Office furniture (used)	March 20	\$600,000

- If Woolard elects \$50,000 of §179, what is Woolard's total depreciation deduction for the year (assume that the 2013 §179 limits are extended to 2014)?
- If Woolard elects the maximum amount of §179 for the year, what is the amount of deductible §179 expense for the year? What is the *total* depreciation expense that Woolard may deduct in 2014? What is Woolard's §179 carryforward to next year, if any (assume that the 2013 §179 limits are extended to 2014)?
- Woolard is concerned about future limitations on its §179 expense. How much §179 expense should Woolard expense this year if it wants to maximize its depreciation this year and to avoid any carryover to future years (assume that the 2013 §179 limits are extended to 2014)?

a. Woolard's total deductible depreciation is \$128,595 calculated as follows:

Description	Amount	Explanation
(1) Property placed in service	\$600,000	Total of qualifying assets
(2) Elected §179 amount	<u>(50,000)</u>	Given in problem
(3) Remaining asset basis	\$550,000	(1) – (2)
(4) MACRS depreciation rate	<u>14.29%</u>	7-yr, half-year convention
(5) MACRS depreciation	\$78,595	(3) x (4)
(6) Taxable income limitation for §179	71,405	\$150,000 – (5);

(7) Deductible §179	50,000	Lesser of elected amount or (6)
(7) Total deductible depreciation	\$128,595	(5) + (7)

The furniture does not qualify for bonus depreciation since it is used.

- b. Woolard deducts \$135,710 of §179. Woolard carries forward §179 expense of \$364,290 to next year. The total deductible depreciation is \$150,000 determined as follows:

Description	Amount	Explanation
(1) Property placed in service	\$600,000	Total of qualifying assets
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	0	(1) – (2) (<i>permanently disallowed</i>), not less than \$0
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>0</u>	From (3)
(6) Maximum §179 expense after phase-out	\$500,000	(4) – (5) This is the amount Woolard elects for the year.
(7) Remaining basis in furniture	100,000	(1) – (6)
(8) MACRS depreciation rate	<u>14.29%</u>	7-year, half-year convention
(9) MACRS depreciation	14,290	(7) x (8)
(10) §179 taxable income limitation	\$135,710	\$150,000 – (9)
(11) Maximum deductible §179 expense after taxable income limitation.	\$135,710	Lesser of (6) or (10)
Excess §179 expense carried forward	\$364,290	(6) – (11)
Woolard's total depreciation deduction	\$150,000	(9) + (11)

Woolard elects the maximum allowed for the year and must reduce the assets' bases by this amount. The remaining basis is subject to regular MACRS depreciation. Since the furniture is used property it is not eligible for bonus depreciation. The §179 taxable income limitation is taxable income after regular depreciation deductions but before the §179 expense. Woolard's §179 deduction is limited to this taxable income amount. The remaining §179 amount that Woolard elected but is not allowed to deduct this year can be carried over to future years.

- c. Woolard should elect to expense \$74,974 of §179 to maximize its depreciation this year and to avoid any carryover determined as follows:

Description	Amount	Explanation
(1) Property placed in service	\$600,000	Total of qualifying assets
(2) Threshold for §179 phase-out	<u>(2,000,000)</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	0	(1) – (2) (<i>permanently disallowed</i>)
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>0</u>	From (3)

(6) Maximum §179 expense after phase-out	\$500,000	(4) – (5)
(7) §179 amount Woolard elects to maximize the current year total depreciation deduction	\$74,974	See discussion below
(8) Remaining basis in furniture	525,026	(1) – (7)
(9) MACRS depreciation rate	<u>14.29%</u>	7-year, half-year convention
(10) MACRS depreciation	75,026	(9) x (8)
(11) §179 taxable income limitation	\$74,974	\$150,000 – (10)
(12) Maximum §179 expense after taxable income limitation.	\$74,974	Lesser of (7) or (11). This is the amount Woolard elects for the year.
Excess §179 expense	\$-0-	(7) – (12)
Woolard's total depreciation deduction	\$150,000	(10) + (12)

Woolard must determine the maximum §179 amount allowed for the year without being limited by the taxable income limitation. To do this, Woolard determines the §179 amount as follows:

§179 amount = Taxable income before any depreciation minus regular MACRS depreciation.

The MACRS depreciation amount is determined after the §179 elected amount because the depreciable basis is reduced by the elected §179 amount and would be determined as follows:

MACRS depreciation = Depreciation rate x (asset cost minus elected §179)

To solve this, assume the following labels:

I = taxable income before any depreciation

R = MACRS depreciation rate

C = asset cost

S = §179 expense

The elected §179 amount will equal:

$$S = I - R(C - S)$$

Rearranging and solving for S:

$$S = (I - RxC)/(1 - R)$$

Substituting in Woolard's facts:

$$S = (\$150,000 - 14.29\% \times \$600,000)/(1 - 14.29\%)$$

$$S = \$74,974.$$

This amount of §179 minimizes Woolard's required basis reduction of its assets and produces the most depreciation Woolard is eligible to take this year.

61. [LO 2, LO 3] {Planning} Assume that Sivart Corporation has 2014 taxable income of \$750,000 before the §179 expense, acquired the following assets during 2014:

Asset	Placed in Service	Basis
Machinery	October 12	\$1,440,000
Computer Equipment	February 10	70,000
Delivery Truck - used	August 21	93,000
Furniture	April 2	<u>310,000</u>
Total		\$1,913,000

- a) What is the maximum amount of §179 expense Sivart may deduct for 2014 (assume that bonus depreciation and the 2013 179 limits are extended to 2014)?
 b) What is the maximum *total* depreciation expense (§179, bonus, MACRS) that Sivart may deduct in 2014 on the assets it placed in service in 2014 (assume that bonus depreciation and the 2013 179 limits are extended to 2014)?

a. *The maximum §179 expense is \$500,000.*

Description	Amount	Explanation
(1) Property placed in service in 2014	\$1,913,000	Total of qualifying assets
(2) Threshold for §179 phase-out	<u>2,000,000</u>	2014 amount [§179(b)(2)]
(3) Phase-out of maximum §179 expense	\$0	(1) – (2) (<i>permanently disallowed</i>), not less than \$0
(4) Maximum 179 expense before phase-out	\$500,000	2014 amount [§179(b)(1)]
(5) Phase-out of maximum §179 expense	<u>\$0</u>	From (3)
(6) Maximum §179 expense after phase-out	\$500,000	(4) – (5), not limited by taxable income

b. *The maximum depreciation expense is \$1,230,647 (mid-quarter convention). Depreciation is maximized by (1) applying the §179 expense against 7-year rather than 5 year property and (2) applying against the 7-year property placed in service in the 4th quarter (machinery) rather than the furniture that was placed in service in the second quarter because, due to the mid-quarter convention, the percentage for computing depreciation on the machine is only 3.57% while it is 17.85% for the furniture. As a general rule, the taxpayer will maximize current year depreciation expense by applying the §179 expense against the asset with the lowest depreciation percentage. The new assets are eligible for 50 percent bonus. The truck does not qualify for bonus depreciation because it is used property.*

Asset	Original Basis	§179 Expense	Remaining Basis	Bonus Depreciation	Remaining Basis	Rate	Depreciation Expense
Machinery (7-year)	\$1,440,000	\$407,000	\$1,033,000	\$516,500	\$470,000	3.57%	\$18,439
Computers (5-year)	70,000		70,000	35,000	35,000	35.00%	12,250
Delivery Truck (5 year)	93,000	93,000		-			13,950
Furniture (7 year)	310,000		310,000	155,000	155,000	17.85%	27,668
§179 Expense							\$500,000
Bonus depreciation				\$706,500			\$706,500
Total Depreciation Expense							\$1,264,857

62. [LO 3] Phil owns a ranch business and uses 4-wheelers to do much of his work. Occasionally, though, he and his boys will go for a ride together as a family activity. During year 1, Phil put 765 miles on the 4-Wheeler that he bought on January 15 for \$6,500. Of the miles driven, only 175 miles were for personal use. Assume 4-Wheelers qualify to be depreciated according to the 5-Year MACRS schedule and the 4-Wheeler was the only asset Phil purchased this year.

- a. Calculate the allowable depreciation for year 1 (ignore the §179 expense and bonus depreciation).
- b. Calculate the allowable depreciation for year 2 if total miles were 930 and personal use miles were 400 (ignore the §179 expense and bonus depreciation).

a) The depreciation expense will be \$1,003 in year 1, calculated as follows:

Description	Amount	Explanation
(1) Original basis of 4-wheeler	\$6,500	Assumed in problem
(2) MACRS depreciation rate	20%	5-yr prop, yr. 1, 1/2 yr. convention.
(3) Full MACRS depreciation expense	\$1,300	(1) x (2)
(4) Business use percentage	77.12%	590 miles/765 miles
Depreciation deduction for year	\$1,003	(3) x (4)

b) The depreciation expense will be \$1,185 in year 2, calculated as follows:

Description	Amount	Explanation
(1) Original basis of 4-wheeler	\$6,500	Assumed in problem
(2) MACRS depreciation rate	32%	5-yr prop, yr. 1, 1/2 yr. convention.
(3) Full MACRS depreciation expense	\$2,080	(1) x (2)
(4) Business use percentage	56.99%	530 miles/930 miles
Depreciation deduction for year	\$1,185	(3) x (4)

63. [LO 3] Assume that Ernesto purchased a laptop computer on July 10 of year 1 for \$3,000. In year 1, 80 percent of his computer usage was for his business and 20 percent was for computer gaming with his friends. This was the only asset he placed in service during year 1. Ignoring any potential §179 expense and bonus depreciation, answer the questions for each of the following alternative scenarios:
- What is Ernesto's depreciation deduction for the computer in year 1?
 - What would be Ernesto's depreciation deduction for the computer in year 2 if his year 2 usage were 75 percent business and 25 percent for computer gaming?
 - What would be Ernesto's depreciation deduction for the computer in year 2 if his year 2 usage were 45 percent business and 55 percent for computer gaming?
 - What would be Ernesto's depreciation deduction for the computer in year 2 if his year 2 usage were 30 percent business and 70 percent for computer gaming?

a) The depreciation expense will be \$480 in year 1, calculated as follows:

<i>Description</i>	<i>Amount</i>	<i>Explanation</i>
(1) Original basis of laptop	\$3,000	Assumed in problem
(2) MACRS depreciation rate	20%	5-yr prop, yr. 1, ½ yr. convention.
(3) Full MACRS depreciation expense	\$600	(1) x (2)
(4) Business use percentage	80%	Assumed in the problem
Depreciation deduction for year	\$480	(3) x (4)

b) The depreciation expense will be \$720 in year 2, calculated as follows:

<i>Description</i>	<i>Amount</i>	<i>Explanation</i>
(1) Original basis of laptop	\$3,000	Assumed in problem
(2) MACRS depreciation rate	32%	5-yr prop, yr. 1, ½ yr. convention.
(3) Full MACRS depreciation expense	\$960	(1) x (2)
(4) Business use percentage	75%	Assumed in the problem
Depreciation deduction for year	\$720	(3) x (4)

c) \$30. Because his business usage is below 50%, Ernesto must use the straight-line method to determine depreciation. Using this method, his depreciation expense for year 2 is \$270. However, because his business usage dropped from above to below 50%, he must also recalculate prior year depreciation using the straight line method. Any accelerated depreciation that he claimed in the prior year in excess of the straight-line amount for that prior year reduces the \$270 of depreciation expense for year 2. In this case, the excess \$240 depreciation reduces the \$270, leaving \$30 of depreciation expense as computed below.

<i>Description</i>	<i>Amount</i>	<i>Explanation</i>
(1) <i>Straight-line depreciation in current year</i>	\$270	\$3,000/5 years x 45% business
(2) <i>Prior year straight-line depreciation</i>	\$240	\$3,000/5 x 1/2 year convention x 80% business use percentage
(3) <i>Prior year accelerated depreciation</i>	\$480	From part "a" above
(4) <i>Excess accelerated depreciation</i>	\$240	(3) – (2)
Current year depreciation deduction	\$30	(1) – (4).

d) Income of \$60 (no depreciation deduction). Because his business usage in year 2 is below 50%, Ernesto must use the straight-line method to determine depreciation. Using this method, his depreciation expense is \$180 in year 2 because his business use is 30%. Moreover, because the computer is listed property and fell below 50% business use, depreciation for year 1 must be recalculated using the straight-line method and any excess depreciation reduces the year 2 depreciation amount. In this case, the excess depreciation of \$240 is \$60 greater than the \$180 straight line depreciation so Ernesto does not get to deduct depreciation expense in year 2, but instead he must recognize ordinary income of \$60. The \$60 of income is computed as follows:

<i>Description</i>	<i>Amount</i>	<i>Explanation</i>
(1) <i>Straight-line depreciation in current year</i>	\$180	\$3,000/5 years x 30% business
(2) <i>Prior year straight-line depreciation</i>	\$240	\$3,000/5 x 1/2 year convention x 80% business use percentage
(3) <i>Prior year accelerated depreciation</i>	\$480	From part "a" above
(4) <i>Excess accelerated depreciation</i>	\$240	(3) – (2)
Current year income	(\$60)	(1) – (4).

64. [LO 3] Lina purchased a new car for use in her business during 2014. The auto was the only business asset she purchased during the year and her business was extremely profitable. Calculate her maximum depreciation deductions (including \$179 expense unless stated otherwise) for the automobile in 2014 and 2015 (Lina doesn't want to take bonus depreciation for 2014 or 2015) in the following alternative scenarios (assuming half-year convention for all):

- The vehicle cost \$15,000 and business use is 100 percent (ignore \$179 expense).
- The vehicle cost \$40,000, and business use is 100 percent.
- The vehicle cost \$40,000, and she used it 80 percent for business.
- The vehicle cost \$40,000, and she used it 80 percent for business. She sold it on March 1 of year 2.
- The vehicle cost \$40,000, and she used it 20 percent for business.
- The vehicle cost \$40,000 and is an SUV that weighed 6,500 pounds. Business use was 100 percent.

a. The depreciation expense is \$3,000 in 2014 and \$4,800 in 2015, calculated as follows:

Description	2014 Amount	2015 Amount	Explanation
(1) Original basis of auto	\$15,000	\$15,000	Assumed in problem
(2) MACRS depreciation rate	<u>20%</u>	<u>32%</u>	5-yr prop, yr. 1, ½ yr. convention.
(3) Full MACRS depreciation expense	\$3,000	\$4,800	(1) x (2)
(4) Maximum auto depreciation	\$3,160	\$5,100	Luxury auto limits
Depreciation deduction for year	\$3,000	\$4,800	Lesser of (3) or (4)

b. The depreciation expense is \$3,160 in 2014 and \$5,100 in 2015, calculated as follows:

Description	2014 Amount	2015 Amount	Explanation
(1) Original basis of auto	\$40,000	\$40,000	Assumed in problem
(2) MACRS depreciation rate	<u>20%</u>	<u>32%</u>	5-yr prop, yr. 1, ½ yr. convention.
(3) Full MACRS depreciation expense	\$8,000	\$12,800	(1) x (2)
(4) Maximum auto depreciation	\$3,160	\$5,100	Luxury auto limits
Depreciation deduction for year	\$3,160	\$5,100	Lesser of (3) or (4)

c. The depreciation expense will be \$2,528 in 2014 and \$4,080 in 2015, calculated as follows:

Description	2014 Amount	2015 Amount	Explanation
(1) Original basis of auto	\$40,000	\$40,000	Assumed in problem
(2) MACRS depreciation rate	<u>20%</u>	<u>32%</u>	5-yr prop, yr. 1, ½ yr. convention.
(3) Full MACRS depreciation expense	\$8,000	\$12,800	(1) x (2)
(4) Maximum auto depreciation	\$3,160	\$5,100	Luxury auto limits
(5) Depreciation deduction for year based on 100% business use	\$3,160	\$5,100	Lesser of (3) or (4)
(6) Business use percentage	80%	80%	Assumed in problem
Depreciation deduction for year	\$2, 528	\$4,080	(5) x (6)

d. The depreciation expense will be \$2,528 in 2014 (as calculated in part c above). The depreciation expense will be \$2,040 in 2015, calculated as follows:

Description	2014 Amount	Explanation
(1) Original basis of auto	\$40,000	Assumed in problem
(2) MACRS depreciation rate	<u>32%</u>	5-yr prop, yr. 1, ½ yr. convention.
(3) Full MACRS depreciation expense	\$12,800	(1) x (2)
(4) Maximum auto depreciation	\$5,100	Luxury auto limit year 2
(5) Depreciation for entire year	\$5,100	Lesser of (3) or (4)

(6) <i>Partial year</i>	50%	<i>Half year of depreciation (half-year convention)</i>
(7) Depreciation deduction for year	\$2,550	
(8) <i>Business use percentage</i>	80%	<i>Assumed in problem</i>
Depreciation deduction for year	\$2,040	(7) x (8)

e. The depreciation expense will be \$632 in 2014 and \$1,020 in 2015, calculated as follows:

Description	2014 Amount	2015 Amount	Explanation
(1) <i>Original basis of auto</i>	\$40,000	\$40,000	<i>Assumed in problem</i>
(2) <i>MACRS (Straight-line) depreciation rate</i>	<u>10%</u>	<u>20%</u>	<i>5-yr straight-line, ½ yr. convention.</i>
(3) <i>Full MACRS depreciation expense</i>	\$4,000	\$8,000	(1) x (2)
(4) <i>Maximum auto depreciation</i>	\$3,160	\$5,100	<i>Luxury auto limits</i>
(5) Depreciation deduction for year based on 100% business use	\$3,160	\$5,100	<i>Lesser of (3) or (4)</i>
(6) <i>Business use percentage</i>	20%	20%	<i>Assumed in problem</i>
Depreciation deduction for year	\$632	\$1,020	(5) x (6)

f. The depreciation expense will be \$28,000 in 2014 and \$4,800 in 2015, calculated as follows:

Description	2014 Amount	2015 Amount	Explanation
(1) <i>Original basis of auto</i>	\$40,000	N/A	<i>Assumed in problem</i>
(2) <i>Section 179 expense</i>	\$25,000	N/A	<i>Maximum §179 expense for SUV</i>
(3) <i>Depreciable basis</i>	\$15,000	\$15,000	(1) – (2)
(4) <i>MACRS depreciation rate</i>	<u>20%</u>	<u>32%</u>	<i>5-yr prop, yr. 1, ½ yr. convention.</i>
(5) <i>Full MACRS depreciation expense</i>	\$3,000	\$4,800	(3) x (4)
Depreciation deduction in including §179 expense for year	\$28,000	\$4,800	(2) + (5)

Note that the depreciation is maximized in b – e even without the §179 expense.

65. [LO 3] [Research] Paul Vote purchased the following assets this year (ignore §179 expensing and bonus depreciation when answering the questions below):

Asset	Purchase Date	Basis
Machinery	May 12	\$23,500
Computers	August 13	\$20,000
Warehouse	December 13	\$180,000

- a. What is Paul's allowable MACRS depreciation expense for the property?
- b. What is Paul's allowable alternative minimum tax (AMT) depreciation expense for the property? You will need to find the AMT depreciation tables to compute the depreciation.

a. \$7,551, under the half-year convention, calculated as follows:

<i>Asset</i>	<i>Original Basis</i>	<i>Rate</i>	<i>Depreciation Expense</i>
<i>Machinery</i>	\$23,500	14.29%	\$3,358
<i>Computers</i>	\$20,000	20.00%	\$4,000
<i>Nonresidential building</i>	\$180,000	0.107%	\$193
<i>Total Depreciation Expense</i>			\$7,551

b. \$5,710, using the AMT table and the half year convention, calculated as follows:

<i>Asset</i>	<i>Original Basis</i>	<i>Rate</i>	<i>Depreciation Expense</i>
<i>Machinery (7 year 150% DB)</i>	\$23,500	10.71%	\$2,517
<i>Computers (5 year 150% DB)</i>	\$20,000	15.00%	\$3,000
<i>Nonresidential building (39-year straight-line)</i>	\$180,000	0.107%	\$193
<i>Total Depreciation Expense</i>			\$5,710

66. [LO 4] After several profitable years running her business, Ingrid decided to acquire the assets of a small competing business. On May 1 of year 1, Ingrid acquired the competing business for \$300,000. Ingrid allocated \$50,000 of the purchase price to goodwill. Ingrid's business reports its taxable income on a calendar-year basis.

- a. How much amortization expense on the goodwill can Ingrid deduct in year 1, year 2, and year 3?
- b. In lieu of the original facts, assume that Ingrid purchased only a phone list with a useful life of 5 years for \$10,000. How much amortization expense on the phone list can Ingrid deduct in year 1, year 2, and year 3?

a. Ingrid could deduct \$2,222 amortization expense on the goodwill in year 1 and \$3,333 of amortization expense on the goodwill in years 2 and 3, computed as follows:

<i>Description</i>	<i>Amount</i>	<i>Explanation</i>
<i>(1) Basis of Goodwill</i>	\$50,000	<i>Provided in example.</i>
<i>(2) Recovery period</i>	<u>180</u>	<i>15 years</i>
<i>(3) Monthly amortization</i>	\$277.78	<i>(1) / (2)</i>
<i>(4) Months in year 1</i>	<u>x 8</u>	<i>May through December</i>
<i>(5) Year 1 straight-line amortization</i>	\$2,222	<i>(3) x (4)</i>
<i>(6) Months in years 2 and 3</i>	<u>x 12</u>	<i>January through December</i>

(7) Years 2 and 3, annual straight-line amortization	\$3,333	(3) x (6)
---	----------------	------------------

b. Ingrid's amortization for the phone list for year 1 is \$1,333, years 2 and 3 is \$2,000, computed as follows:

Description	Phone List
(1) Basis of phone list	\$10,000
(2) Recovery period in months	<u>60</u>
(3) Monthly amortization	\$166.67
(4) Months in year 1	<u>x 8</u>
(5) Year 1 straight-line amortization	\$1,333
(6) Months in years 2 and 3	<u>x 12</u>
(7) Years 2 and 3, annual straight-line amortization	\$2,000

Since Ingrid purchased only the phone list, it is not considered a §197 intangible and will be amortized over its remaining useful life.

67. [LO 4] Juliette formed a new business to sell sporting goods this year. The business opened its doors to customers on June 1. Determine the amount of start-up costs Juliette can immediately expense (not including amortization) this year in the following alternative scenarios.

- She incurred start-up costs of \$2,000.
- She incurred start-up costs of \$45,000.
- She incurred start-up costs of \$53,500.
- She incurred start-up costs of \$63,000.
- How would you answer parts (a-d) if she formed a partnership or a corporation and she incurred the same amount of organizational expenditures rather than start-up costs (how much of the organizational expenditures would be immediately deductible)?

a. \$2,000, computed as follows:

Start-up Expenses		
Description	Amount	Explanation
(1) Maximum immediate expense	\$5,000	
(2) Total start-up costs	\$2,000	Given in problem
(3) Phase-out threshold	<u>50,000</u>	
(4) Immediate expense phase-out	\$0	(2) – (3)
Allowable immediate expense	\$2,000	Lesser of (2) or [(1) minus – (4)]

b. \$5,000, computed as follows:

Start-up Expenses		
Description	Amount	Explanation
(1) Maximum immediate expense	\$5,000	
(2) Total start-up costs	\$45,000	Given in problem
(3) Phase-out threshold	<u>50,000</u>	
(4) Immediate expense phase-out	\$0	(2) – (3), not less than \$0
Allowable immediate expense	\$5,000	Lesser of (2) or [(1) minus – (4)]

c. \$1,500, computed as follows:

Start-up Expenses		
Description	Amount	Explanation
(1) Maximum immediate expense	\$5,000	
(2) Total start-up costs	\$53,500	Given in problem
(3) Phase-out threshold	<u>50,000</u>	
(4) Immediate expense phase-out	\$3,500	(2) – (3), not less than \$0
Allowable immediate expense	\$1,500	Lesser of (2) or [(1) minus – (4)]

d. \$0, computed as follows:

Organizational Expenditures		
Description	Amount	Explanation
(1) Maximum immediate expense	\$5,000	
(2) Total start-up costs	\$60,000	Given in problem
(3) Phase-out threshold	<u>50,000</u>	
(4) Immediate expense phase-out	\$10,000	(2) – (3)
Allowable immediate expense	\$0	Lesser of (2) or [(1) minus – (4)] (not less than \$0)

e. The answers would be the same if these were organizational expenditures instead of start-up costs. Note, however, that organizational expenditures only apply to corporations and partnerships and do not apply to businesses organized as sole proprietorships.

68. [LO 4] Nicole organized a new corporation. The corporation began business on April 1 of year 1. She made the following expenditures associated with getting the corporation started:

<u>Expense</u>	<u>Date</u>	<u>Amount</u>
----------------	-------------	---------------

Attorney fees for articles of incorporation	February 10	\$32,000
March 1 – March 30 wages	March 30	\$4,500
March 1 – March 30 rent	March 30	\$2,000
Stock issuance costs	April 1	\$20,000
April 1 – May 30 wages	May 30	\$12,000

- What is the total amount of the start-up costs and organizational expenditures for Nicole's corporation?
- What amount of the start-up costs and organizational expenditures may the corporation immediately expense in year 1?
- What amount can the corporation deduct as amortization expense for the organizational expenditures and for the start-up costs for year 1 (not including the amount it immediately expensed)?
- What would be the allowable organizational expenditures, including immediate expensing and amortization, if Ingrid started a sole proprietorship instead?

a. The only qualifying organizational expenditure is the \$32,000 of attorney fees related to the drafting articles of incorporation. The start-up costs are the wages (\$4,500) and rent (\$2,000) before business began. Therefore, total start-up costs are \$6,500.

b. The corporation may immediately expense \$5,000 of the organizational expenditure and \$5,000 of the start-up costs because the amount of organizational expenditures is under \$50,000 and the amount of start-up costs is under \$50,000.

c. The corporation will deduct amortization expense of \$1,350 for organizational expenditures and \$75 of amortization for start-up costs, computed as follows:

Start-up costs		
Description	Amount	Explanation
(1) Maximum immediate expense	\$5,000	§195(b)(1)(A)(ii)
(2) Total start-up expenditures	\$6,500	
(3) Phase-out threshold	<u>50,000</u>	§195(b)(1)(A)(ii)
(4) Immediate expense phase-out	\$0	(2) – (3), not less than \$0
(5) Allowable immediate expense	\$5,000	(1) – (4)
(6) Remaining organizational expenditures	\$1,500	(2) – (5)
(7) Recovery period in months	<u>180</u>	15 years §195(b)(1)(B)
(8) Monthly straight-line amortization	8.33	(6) / (7)
(9) Teton business months during year 1	<u>x 9</u>	April through December
Year 1 straight-line amortization for start-up costs	\$75	(8) x (9)

Organizational expenditures

Description	Amount	Explanation
(1) <i>Maximum immediate expense</i>	\$5,000	§248(a)(1)
(2) <i>Total organizational expenditures</i>	\$32,000	Given in problem
(3) <i>Phase-out threshold</i>	<u>50,000</u>	§248(a)(1)(B)
(4) <i>Immediate expense phase-out</i>	\$0	(2) – (3), not less than \$0
(5) Allowable immediate expense	\$5,000	(1) – (4)
(6) <i>Remaining organizational expenditures</i>	\$27,000	(2) – (5)
(7) <i>Recovery period in months</i>	<u>180</u>	15 years §248(a)(2)
(8) <i>Monthly straight-line amortization</i>	<u>150</u>	(6) / (7)
(9) <i>Teton business months during year 1</i>	<u>x 9</u>	April through December
Year 1 straight-line amortization for organizational expenditures	\$1,350	(8) x (9)

d. Organizational expenditures are only authorized for corporations (§248) and partnerships (§709). They are not authorized for sole proprietorships. Typically, sole proprietorships do not incur many of the expenses that would qualify as organizational expenditures anyway.

69. [LO 4] Bethany incurred \$20,000 in research and experimental costs for developing a specialized product during July of year 1. Bethany went through a lot of trouble and spent \$10,000 in legal fees to receive a patent for the product in August of year 3.
- What amount of research and experimental expenses for year 1, year 2, and year 3 may Bethany deduct if she elects to amortize the expenses over 60 months?
 - How much *patent* amortization expense would Bethany deduct in year 3 assuming she elected to amortize the research and experimental costs over 60 months?
 - If Bethany chose to capitalize but *not* amortize the research and experimental expenses she incurred in year 1, how much patent amortization expense would Bethany deduct in year 3?

a. The amortization of the research expenditures is \$2,000 in year 1, \$4,000 in year 2, and \$2,333 in year 3, computed as follows:

Description	Amount	Explanation
(1) Research and experimental expenses	\$20,000	Given in problem
(2) <i>Recovery period in months</i>	<u>60</u>	60 months §174
(3) <i>Monthly straight-line amortization</i>	333.33	(1) / (2)
(4) <i>Bethany's business months during year 1</i>	<u>x 6</u>	July through December
(5) Year 1 straight-line amortization	\$2,000	(3) x (4)
(6) <i>Bethany's business months during year 2</i>	12	January through December
(7) Year 2 straight-line amortization	\$4,000	(3) x (5)
(8) Bethany's business months during year	7	January through July, year 3

3 before patent is issued in August		
(9) Year 3 straight-line amortization on research and experimentation costs	2,333	$(3) \times (8)$
(10) Accumulated amortization through July of year 3	8,333	$(5) + (7) + (9)$
(11) Unamortized research and experimentation expenditures as of August, year 3	\$11,667	$(1) - (10)$ <i>Used in answer to part b</i>

b. The patent amortization is \$531, computed as follows:

Description	Amount	Explanation
(1) Unamortized research and experimental expenses	\$11,667	<i>See (11) part a above</i>
(2) Legal expenses related to patent	\$10,000	<i>Given in problem</i>
(3) Amortizable expenses for patent	\$21,667	$(1) + (2)$
(4) Recovery period in months	204	<i>17 years \$167(f)</i>
(5) Monthly straight-line amortization	106.21	$(3) / (4)$
(6) Bethany's business months from August through December	<u>x 5</u>	
Year 3 straight-line amortization for patent	\$531	$(5) \times (6)$

c. The patent amortization is \$735, computed as follows:

Description	Amount	Explanation
(1) Research and experimental expenses	\$20,000	<i>Given in problem (not amortized)</i>
(2) Legal expenses related to patent	\$10,000	<i>Given in problem</i>
(3) Amortizable expenses	\$30,000	$(1) + (2)$
(4) Recovery period in months	204	<i>17 years \$167(f)</i>
(5) Monthly straight-line amortization	147.06	$(3) / (4)$
(6) Bethany's business months from August through December	<u>x 5</u>	
Year 3 straight-line amortization for patent	\$735	$(5) \times (6)$

70. [LO 5] Last Chance Mine (LC) purchased a coal deposit for \$750,000. It estimated it would extract 12,000 tons of coal from the deposit. LC mined the coal and sold it reporting gross receipts of \$1 million, \$3 million, and \$2 million for years 1 through 3, respectively. During years 1 – 3, LC reported net income (loss) from the coal deposit activity in the amount of (\$20,000), \$500,000, and \$450,000, respectively. In years 1 – 3, LC actually extracted 13,000 tons of coal as follows:

<u>(1)</u> Tons of Coal	<u>(2)</u> Basis	<u>Depletion</u> <u>(2)/(1)</u> Rate	<u>Tons extracted per year</u>		
			<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>
12,000	\$750,000	\$62.50	2,000	7,200	3,800

- a. What is Last Chance's cost depletion for years 1, 2, and 3?
- b. What is Last Chance's percentage depletion for each year (the applicable percentage for coal is 10 percent)?
- c. Using the cost and percentage depletion computations from the previous parts, what is Last Chance's actual depletion expense for each year?

a. Last Chance's cost depletion is \$125,000 for year 1, \$450,000 for year 2, and \$175,000 for year 3, calculated as follows:

	Year 1	Year 2	Year 3	Explanation
(1) Tons extracted	2,000	7,200	3,800	
(2) Depletion rate	\$62.50	\$62.50	\$62.50	
Cost Depletion Expense	\$125,000	\$450,000	\$175,000*	(1) x (2)

*This is the remaining basis. Under the cost depletion method, the taxpayer's amortization is limited to the cost basis in the natural resource. The full amount of amortization would have been \$237,500 if this were not the case.

b. Last Chance's percentage depletion for each year is calculated as follows:

	Year 1	Year 2	Year 3	Explanation
(1) Net income from activity (before depletion expense)	(\$20,000)	\$500,000	\$450,000	Given in problem
(2) Gross Income	\$1,000,000	\$3,000,000	\$2,000,000	
(3) Percentage	<u>x 10%</u>	<u>x 10%</u>	<u>x 10%</u>	
(4) Percentage Depletion Expense before limit	\$100,000	\$300,000	\$200,000	(2) x (3)
(5) 50% of net income limitation	\$0	\$250,000	\$225,000	(1) x 50%
Allowable percentage depletion	\$0	\$250,000	\$200,000	Lesser of (4) or (5)

Note that percentage depletion is not limited to the basis in the property.

c. Depletion expense is the greater of cost depletion or percentage depletion calculated as follows:

Tax Depletion Expense

	Year 1	Year 2	Year 3	Explanation
(1) Cost depletion	\$125,000	\$450,000	\$175,000	Part a
(2) Percentage depletion	\$0	\$250,000	\$200,000	Part b
Deductible depletion expense	\$125,000	\$450,000	\$200,000	Greater of (1) or (2)

Comprehensive Problems

71. Back in Boston, Steve has been busy creating and managing his new company, Teton Mountaineering (TM), which is based out of a small town in Wyoming. In the process of doing so, TM has acquired various types of assets. Below is a list of assets acquired during 2013:

<u>Asset</u>	<u>Cost</u>	<u>Date Place in Service</u>
Office furniture	\$10,000	02/03/2013
Machinery	560,000	07/22/2013
Used delivery truck*	15,000	08/17/2013

*Not considered a luxury automobile, thus not subject to the luxury automobile limitations

During 2013, TM had huge success (and had no §179 limitations) and Steve acquired more assets the next year to increase its production capacity. These are the assets acquired during 2014:

<u>Asset</u>	<u>Cost</u>	<u>Date Place in Service</u>
Computers & Info. System	\$40,000	03/31/2014
Luxury Auto [†]	80,000	05/26/2014
Assembly Equipment	475,000	08/15/2014
Storage Building	400,000	11/13/2014

[†]Used 100% for business purposes. .

TM generated taxable income in 2014 before any §179 expense of \$732,500 (assume bonus depreciation and the 2013 §179 limitations are extended to 2014).

Required

- Compute 2013 depreciation deductions including §179 expense (ignoring bonus depreciation).
- Compute 2014 depreciation deductions including §179 expense (ignoring bonus depreciation).
- Compute 2014 depreciation deductions including §179 expense, but now assume that Steve would like to take bonus depreciation.
- Ignoring part c, now assume that during 2014, Steve decides to buy a competitor's assets for a purchase price of \$350,000. Compute maximum 2014 cost recovery including §179 expense (ignoring bonus depreciation). Steve purchased the following assets for the lump-sum purchase price.

<u>Asset</u>	<u>Cost</u>	<u>Date Placed in Service</u>
Inventory	\$20,000	09/15/2014
Office furniture	30,000	09/15/2014
Machinery	50,000	09/15/2014

Patent	98,000	09/15/2014
Goodwill	2,000	09/15/2014
Building	130,000	09/15/2014
Land	20,000	09/15/2014

e. Complete Part I of Form 4562 for part b.

a) The 2013 depreciation deduction is \$513,003.

Description	Cost	Sec. 179 Expense	MACRS Basis	Current MACRS Expense	Total Expense
Office Furniture	10,000	10,000	-	-	10,000
Machinery	560,000	490,000	70,000	10,003	500,003
Used Delivery Truck	15,000		15,000	3,000	3,000
Totals	585,000	500,000	85,000	13,003	513,003

b) The 2014 depreciation deduction is \$529,387.

Description	Cost	Sec. 179 Expense	MACRS Basis	Current MACRS Expense	Total Expense
Office Equipment	10,000		-	-	-
Machinery	560,000		70,000	17,143	17,143
Used Delivery Truck	15,000		15,000	4,800	4,800
Computers & Info. System	40,000	25,000	15,000	3,000	28,000
Luxury Auto	80,000		80,000	3,160	3,160
Assembly Equipment	475,000	475,000	-	-	475,000
Storage Building	400,000		400,000	1,284	1,284
Totals	1,580,000	500,000	580,000	29,387	529,387

c) The 2014 depreciation deduction is \$543,387.

Description	Cost	Sec. 179 Expense	Bonus	MACRS Basis	Current MACRS Expense	Total Expense
Office Furniture	10,000				-	-

Solutions Manual – McGraw-Hill's Taxation, by Spilker et al.

<i>Machinery</i>	560,000			70,000	17,143	17,143

11	11 Business income limitation. Enter the smaller of business income (not less than zero) or line 5 (see instructions)	
12	12 Section 179 expense deduction. Add lines 9 and 10, but do not enter more than line 11	
13	13 Carryover of disallowed deduction to 2014. Add lines 9 and 10, less line 12 ▶	

72. While completing undergraduate school work in information systems, Dallin Bourne and Michael Banks decided to start a business called ISys Answers which was a technology support company. During year 1, they bought the following assets and incurred the following fees at start-up:

<u>Year 1 Assets</u>	<u>Purchase Date</u>	<u>Basis</u>
Computers (5-year)	October 30, Y1	\$15,000
Office equipment (7-year)	October 30, Y1	\$10,000
Furniture (7-year)	October 30, Y1	\$3,000
Start-up costs	October 30, Y1	\$17,000

In April of year 2, they decided to purchase a customer list from a company started by fellow information systems students preparing to graduate who provided virtually the same services. The customer list cost \$10,000 and the sale was completed on April 30th. During their summer break, Dallin and Michael passed on internship opportunities in an attempt to really grow their business into something they could do full time after graduation. In the summer, they purchased a small van (for transportation, not considered a luxury auto) and a pinball machine (to help attract new employees). They bought the van on June 15, Y2 for \$15,000 and spent \$3,000 getting it ready to put into service. The pinball machine cost \$4,000 and was placed in service on July 1, Y2.

<u>Year 2 Assets</u>	<u>Purchase Date</u>	<u>Basis</u>
Van	June 15, Y2	\$18,000
Pinball Machine (7-year)	July 1, Y2	\$4,000
Customer List	April 30, Y2	\$10,000

Assume that ISys Answers does not claim any §179 expense or bonus depreciation.

- a. What are the maximum cost recovery deductions for ISys Answers for Y1 and Y2?
- b. Complete ISys Answers' form 4562.
- c. What is ISys Answers' basis in each of its assets at the end of Y2?

a. ISys Answers' Y1 cost recovery deductions are \$6,414, including the expensing of the start-up costs. ISys Answers' Y2 cost recovery deductions are \$14,754.

Y1 Cost Recovery

<i>Asset</i>	<i>Original Basis</i>	<i>Expense</i>	<i>Remaining Basis</i>	<i>Quarter</i>	<i>Rate</i>	<i>Cost Recovery Expense</i>
<i>Computer Equipment</i>	\$15,000		\$15,000	4 th	5.00%	\$750
<i>Office Equipment</i>	\$10,000		\$10,000	4 th	3.57%	\$357
<i>Furniture</i>	\$3,000		\$3,000	4 th	3.57%	\$107

73. Diamond Mountain was originally thought to be one of the few places in North America to contain diamonds, so Diamond Mountain Inc. (DM) purchased the land for \$1,000,000. Later, DM discovered that the only diamonds on the mountain had been planted there and the land was worthless for mining. DM engineers discovered a new survey technology and discovered a silver deposit estimated at 5,000 pounds on Diamond Mountain. DM immediately bought new drilling equipment and began mining the silver.

In years 1-3 following the opening of the mine, DM had net (gross) income of \$200,000 (\$700,000), \$400,000 (\$1,100,000), and \$600,000 (\$1,450,000), respectively. Mining amounts for each year were as follows: 750 pounds (year 1), 1,450 pounds (year 2), and 1,800 pounds (year 3). At the end of year 2, engineers used the new technology (which had been improving over time) and estimated there was still an estimated 6,000 pounds of silver deposits.

DM also began a research and experimentation project with the hopes of gaining a patent for its new survey technology. Diamond Mountain Inc. chooses to capitalize research and experimentation expenditures and amortize the costs over 60 months or until it obtains a patent on its technology. In March of year 1, DM spent \$95,000 on research and experimentation. DM spent another \$75,000 in February of year 2 for research and experimentation. In September of year 2, DM paid \$20,000 of legal fees and was granted the patent in October of year 2 (the entire process of obtaining a patent was unusually fast).

Answer the following questions regarding DM's activities (assume that DM tries to maximize its deductions if given a choice).

- a. What is DM's depletion expense for years 1 - 3?
- b. What is DM's research and experimentation amortization for years 1 and 2?

c. What is DM's basis in its patent and what is its amortization for the patent in year 2?

a. DM's depletion expense is as follows, actual cost and percentage depletion are shown below:

Actual Depletion

Original basis	\$	1,000,000
Year 1 depletion (cost depletion)	\$	(150,000)
Year 1 Ending basis	\$	850,000
Year 2 depletion (cost depletion)	\$	(165,431)
Year 2 Ending basis	\$	684,569
Year 3 depletion (percentage depletion)	\$	(217,500)
Year 3 Ending basis	\$	467,069

Cost Depletion Method

	<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>
Year 1 Beginning basis	\$1,000,000	\$850,000	\$684,569
Estimated pounds of silver in mine at beginning of year	5,000	7,450	6,000
Basis depletion per pound	\$ 200	\$ 114.09	\$114.09
Pounds of silver mined in year	750	1,450	1,800
Year depletion	\$150,000	\$165,431	\$205,362
Basis at end of year	\$ 850,000	\$ 684,569	\$ 479,207

Percentage Depletion Method

	<u>Year 1</u>	<u>Year 2</u>	<u>Year 3</u>
Net income	\$ 200,000	\$ 400,000	\$ 600,000
Gross income	\$ 700,000	\$1,100,000	\$ 1,450,000
Percentage	15%	15%	15%
Percentage depletion expense before limit	\$ 105,000	\$ 165,000	\$ 217,500
50% of net income limitation	\$ 100,000	\$ 200,000	\$ 300,000
Allowable percentage depletion	\$ 100,000	\$ 165,000	\$ 217,500

b. DM's research and experimentation amortization for years 1 and 2 are as follows:

Description	Year 1 Amount	Year 2 Amount
Research and experimental expenses	\$95,000	\$75,000
Recovery period in months	60	60
Monthly straight-line amortization	\$1,583.33	\$1,250
DM's business months during year 1	10	0

Solutions Manual – McGraw-Hill's Taxation, by Spilker et al.

<i>Year 1 straight-line amortization</i>	\$15,833	\$ -	
<i>DM's business months during year 2 before the patent is issued</i>	9	8	
<i>Year 2 straight-line amortization</i>	\$14,250	\$10,000	
<i>Accumulated amortization through September of year 2</i>	\$30,083	\$10,000	
<i>Unamortized Research and experimentation</i>	\$64,917	\$65,000	\$129,917

c. DM's basis in its patent and amortization for patent in year 2 are as follows:

Description	Amount
<i>Unamortized research and experimental expenses</i>	\$129,917
<i>Legal expenses related to patent</i>	<u>\$20,000</u>
<i>Amortizable expenses for patent</i>	\$149,917
<i>Recovery period in months</i>	<u>204</u>
<i>Monthly straight-line amortization</i>	734.89
<i>DM's business months from October through December</i>	<u>3</u>
<i>Year 2 straight-line amortization for patent</i>	\$2,205
